SOUTH

POLAR REGIONS

THE GEORGE F. CRAM COMPANY
Atlas Headquarters—Est. 1867
CHICAGO

THE PRINCIPAL ROUTES OF EXPLORATION:

	SHOWN THUS:
Capt. Roald Amundsen, Norwegian, 1911-12	o····o····o····o····
Comm. von Bellingshausen, German, 1819-21	—·—·—·—
Capt. James Cook, British, 1773-5	— — — — — —
Capt. von Drygalski, German ("Gauss"), 1901-3	oo——oo——oo——
Comm. de Gerlache, Belgium ("Belgica"), 1898	┬┬┬┬┬┬┬
Capt. Nares, British ("Challenger"), 1874	o——o——o——
Dr. Otto Nordenskjold, Swedish ("Antarctic"), 1902-4	═══════
Capt. Robt. Scott, British ("Discovery"), 1st voyage 1901-4; ("Terra Nova"), 2d voyage, 1911-12	●——●——●——●
Lt.-Comm. Ernest Shackleton, British, 1908	┼——┼——┼——┼
Capt. James Weddell, British, 1822-23	··——··——··
Rear-Adm. Charles Wilkes, American, 1839-40	┼—┼—┼—┼—┼

In addition to these principal routes the southernmost achievements of the following are shown: Balleny 1839, Biscoe 1830-32, Bruce 1902-4, Charcot 1904-9, Chun 1898-99, D'Urville 1840, Kemp 1833-4, Knox 1839, Larsen 1893 and Moore 1845.

NOTE:
The great ice-capped table-land of the Antarctic Continent is estimated to have an area greater than the U. S. and Alaska combined. Its average elevation of from 8000 to 10,000 feet makes it the highest among the continents.

GEOLOGICAL MAP
OF THE
UNITED STATES

The George F. Cram Co., Chicago

NOTE: This map, based mainly upon the reports of the U. S. Geological Survey and the separate papers of its specialists, follows the classification of that Survey.

The Upper, or Marine, and Lower Cretaceous are represented together; and with them are incorporated the Shasta, Comanche, and Potomac groups; doubtful strata between the Triassic and Permian have been separated as far as possible; and the Pleistocene is here represented only where it entirely covers underlying strata

EXPLANATION

NOTE: A Blank (uncolored) Area signifies that no Geological Survey has been made.

CENOZOIC
Recent & Pleistocene
Neocene {Pliocene Miocene}
Eocene {including Oligocene}
MESOZOIC

INDEX AND GAZETTEER.

Explanation of Keys and Abbreviations.

On the margin of each map letters and numerals will be found. The junction of a line between two like letters on opposite sides, with a line between two like numerals on the other sides of the map marks the central point of a "Key Space." Thus, on the map of Illinois, a line drawn between FF, and crossing one between 6 6 intersects with it near the town of Decatur which is near the center of the key square indicated by the symbol F 6.

Great care has been taken and no pains have been spared in the procurement of the latest or most correct population statistics, which have been taken from the latest Government Statistics of Population from the Census Office of the Department of Commerce and Labor. Wherever the Government statistics could not be obtained they have been gathered and weighed from other reliable sources, such as boards of trade, commercial associations, municipal statistical bureaus, etc.

Some of the abbreviations used are: Cen., Center; Col., College; Cross., Crossing; Cy., City; Dep., Depot; E., East; Fk., Fork; Fs., Falls; Ft., Fort; Fy., Ferry; Har., Harbor; Ho., House; Ht. or Hts., Height or Heights; Isl., Island; Jc., Jct. or Junc., Junction; L., Lake; Ldg., or Lndg., Landing; Lit., Little; Mt., Mount; Mtn., Mountain; N., North; Pk., Park; Pl., Place; Pt., Point; Rd., Road; Riv., River; Rk., Rock; S., South; Sid., Siding; Sp. or Spr., Spring; Spgs., Sprgs., or Sps., Springs; Sq., Square; St., Saint; Sta., Station; Ste., Sainte; Sum., Summit; Sw., Switch; Tun., Tunnel; Val., Valley; Vil., Village; W., West; Whf., Wharf; Yd., Yard, etc.

Capitals, thus: **WASHINGTON**; County Seats, thus: **Bloomington**; Post Offices, Villages, Railroad Stations or Steamboat Landings, thus: Cinnabar.

ALABAMA

First Settled at Mobile, 1711.

Admitted as a Territory, March 3, 1817.

Admitted as a State, Dec. 14, 1819.

Area:
Land, 51,279 sq. miles.
Water, 719 sq. miles.
Total, 51,998 sq. miles.

Population, Last Census, 2,348,174.

Capital, Montgomery.

INDEX OF INDIA, BURMA, NEPAL, ETC.

STATES AND PROVINCES
OF
INDIA, BURMA, NEPAL, BHUTAN, ETC.

NOTE.—British Provinces are in Roman type (thus: Agra); Feudatory States are in Italic type (thus: *Alwer*); Regional names, not of political divisions, are preceded by an asterisk (thus: *Baudalkhand). The names of the Feudatory States are followed by an initial in brackets signifying the affiliation of the ruling race; *viz.*, H—Hindu; M—Mohammedan; S—Sikh; Bud.—Buddhist; Bra.—Brahmo.

PROVINCE OR STATE.	Area sq. miles.	Population.	Capital or Chief City.	Key.

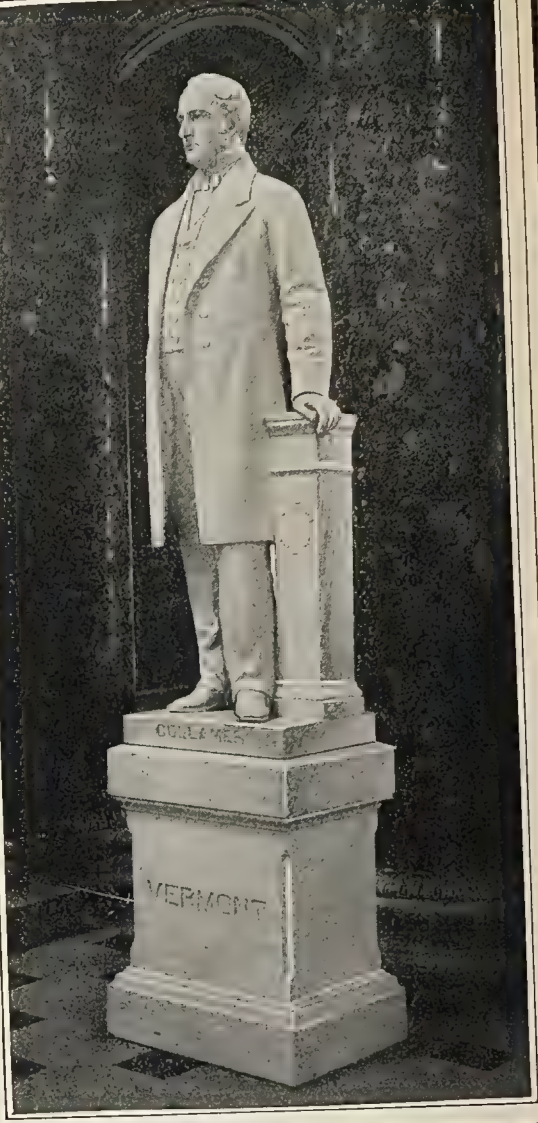
THE EAST OR MAIN FRONT OF THE UNITED STATES CAPITOL, WASHINGTON, D. C.

The Capitol is 751 feet long, 324 feet in greatest breadth, and covers 153,112 square feet of ground, or nearly four acres; it is 155 feet high to the main roof cornices, and 288 feet to the top of the Liberty Statue. The iron Dome weighs 8,909,200 pounds; there are 134 massive Corinthian columns, 100 of which are monoliths. There are over 130 rooms for committee and other purposes, and the legislative halls will seat 2,400 persons with standing room for over 2,000 more. It has cost somewhat over $15,000,000. Although nearly a century intervened from corner stone to final terrace and it was the product of many designers, it is universally conceded to be a remarkably harmonious whole.

GENERAL ETHAN ALLEN
Patriot and Revolutionary Leader (1738-1789).
Presented by Vermont; work of L. G. Mead.

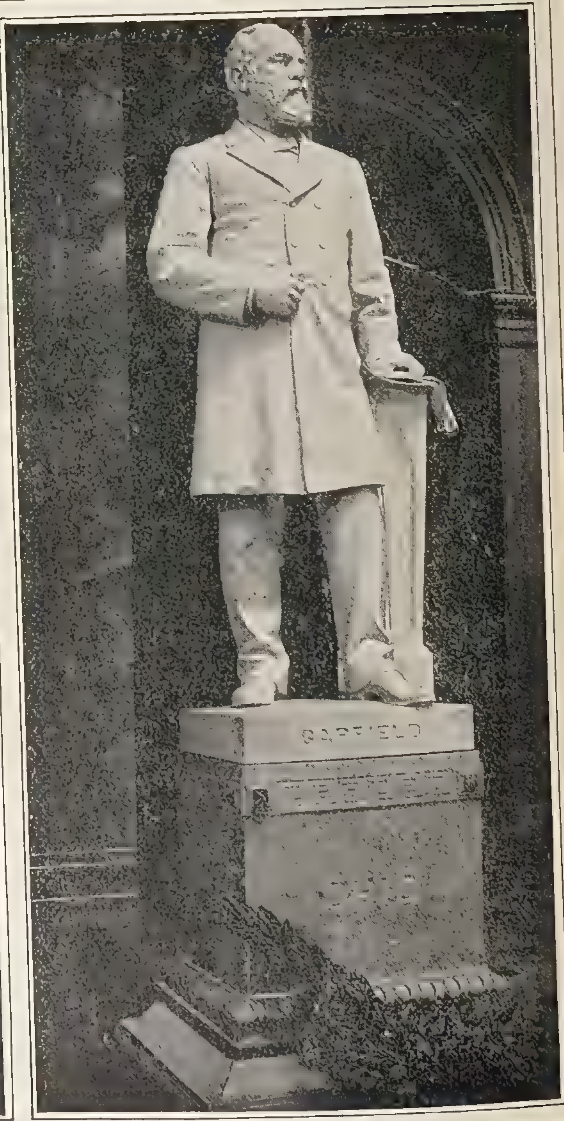
SENATOR LEWIS CASS
Pioneer Soldier and Senator, (1782-1866). Presented by Michigan; work of D. C. French.



SENATOR JACOB COLLAMER
Postmaster-General and Senator, (1792-1865).
Presented by Vermont; work of Preston Powers.

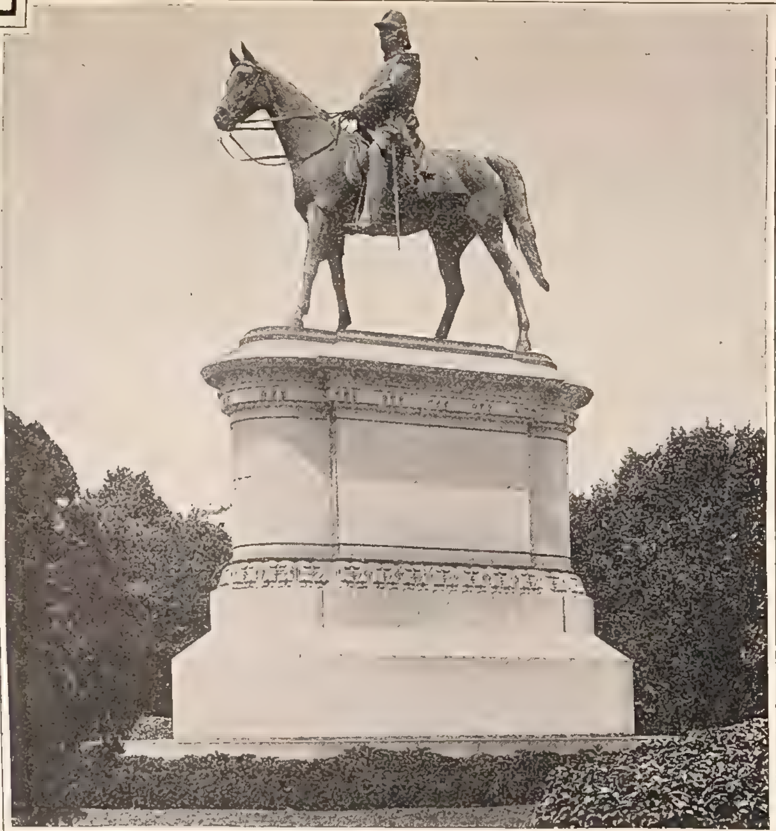
GENERAL ULYSSES S. GRANT
General and Eighteenth President, (1822-1885).
Purchased by Congress; work of F. Simmons.

ROBERT FULTON
Engineer and Inventor, (1765-1815). Presented by Pennsylvania; work of H. Roberts.

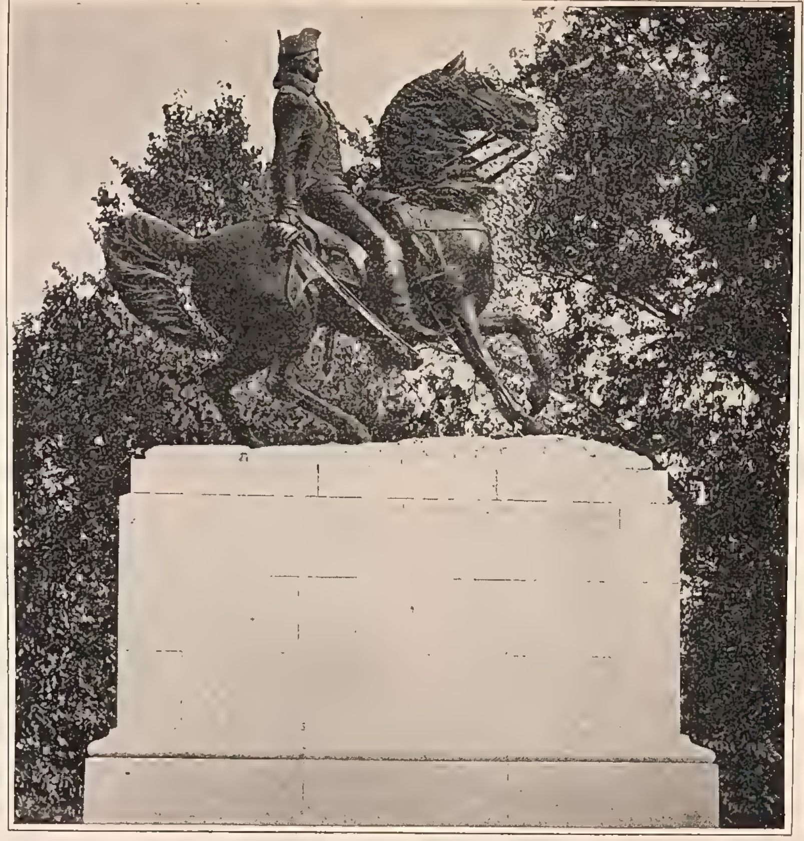


PRESIDENT JAMES A. GARFIELD
Senator and Twentieth President, (1831-1881).
Presented by Ohio; work of C. H. Niehaus.

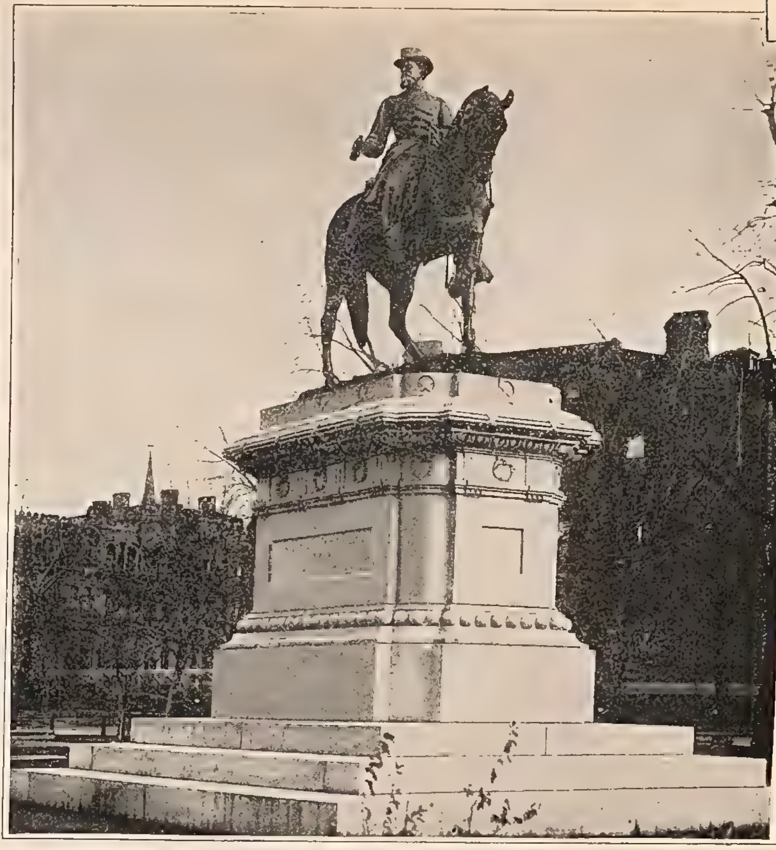
STATUARY IN STATUARY HALL AND THE ROTUNDA.



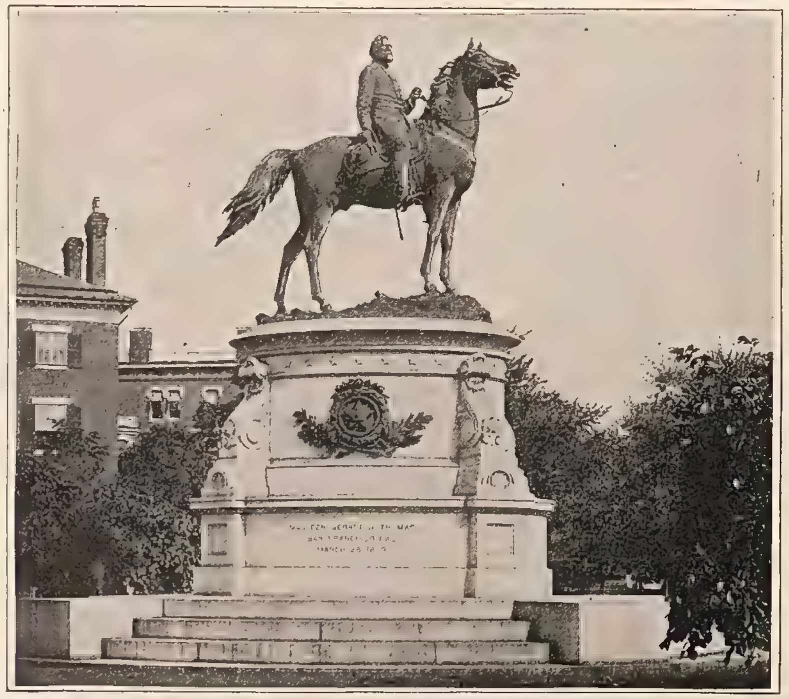
GENERAL WINFIELD SCOTT
In Scott Circle; by Browne; 1874.



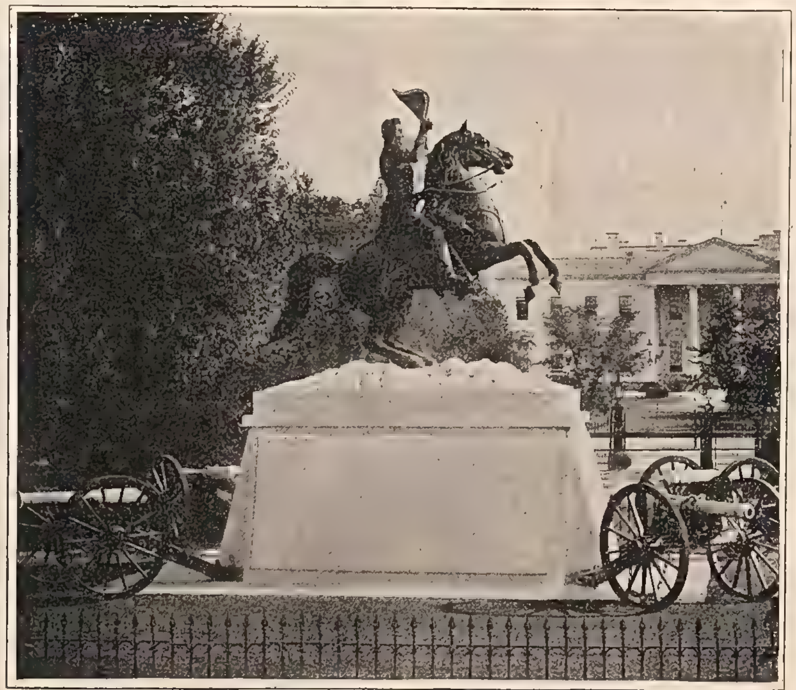
GENERAL GEORGE WASHINGTON
In Washington Circle; by Mills; 1853.



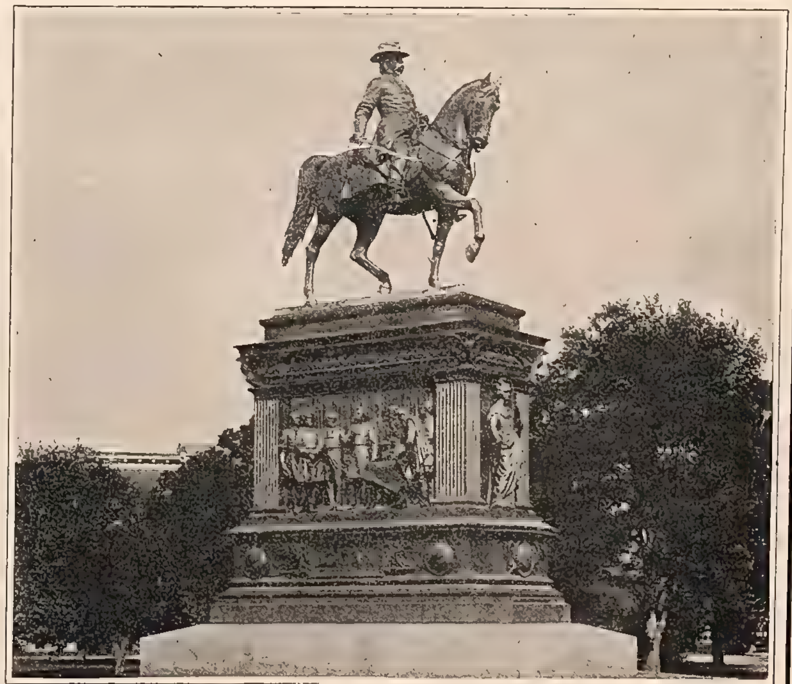
GENERAL JAMES B. McPHERSON
In McPherson Square; by Robisso; 1876.



GENERAL GEORGE H. THOMAS
In Thomas Circle; by Ward; 1879.

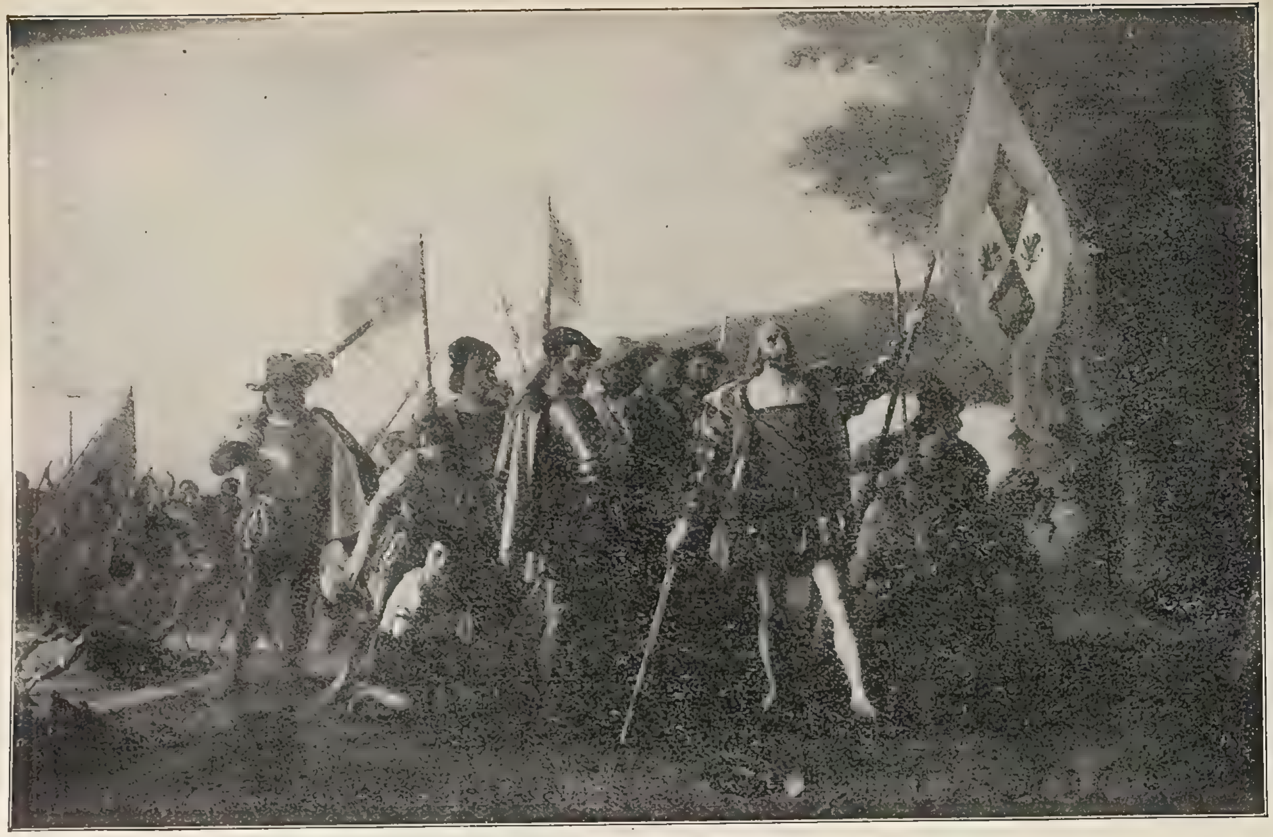


GENERAL ANDREW JACKSON
In Lafayette Square; by Mills; 1853.

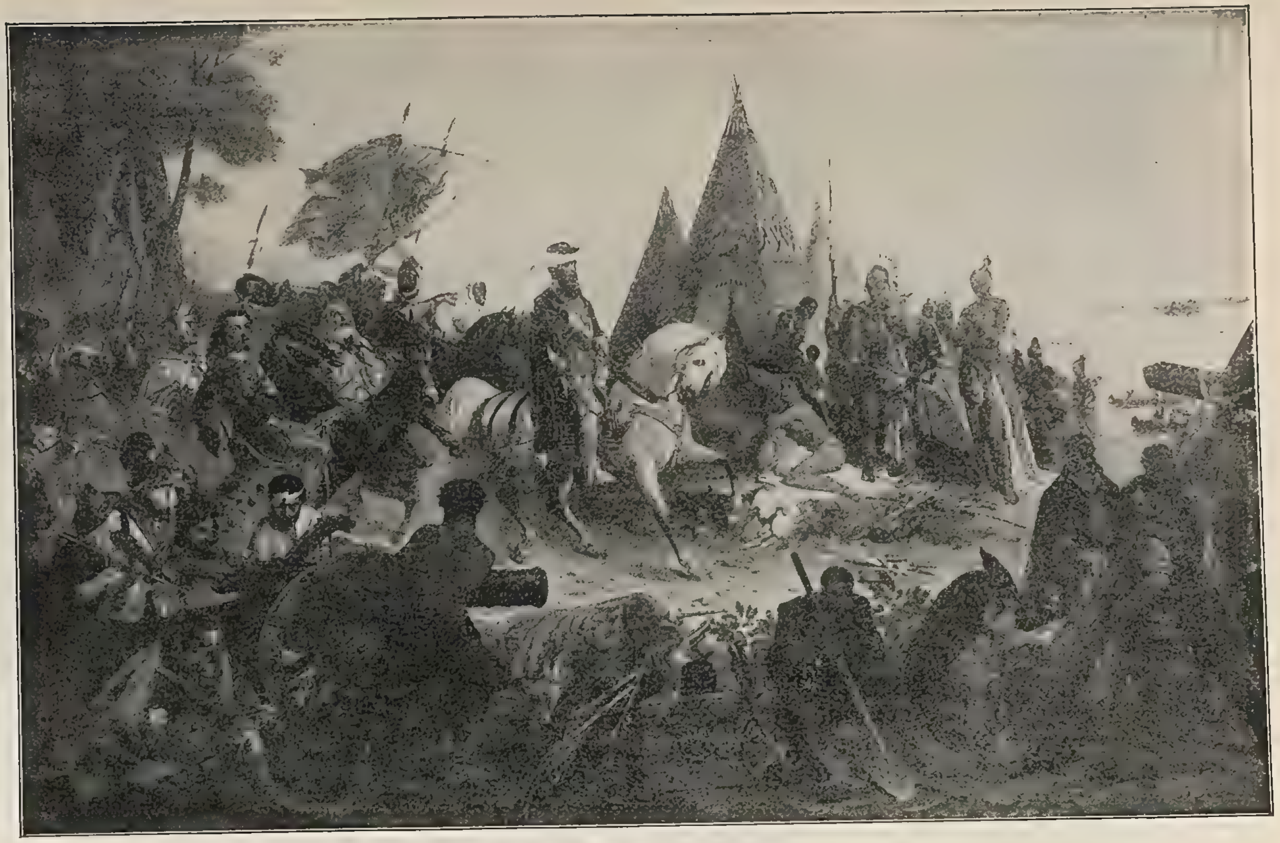


GENERAL JOHN A. LOGAN
In Iowa Circle; by Simmons; 1901.

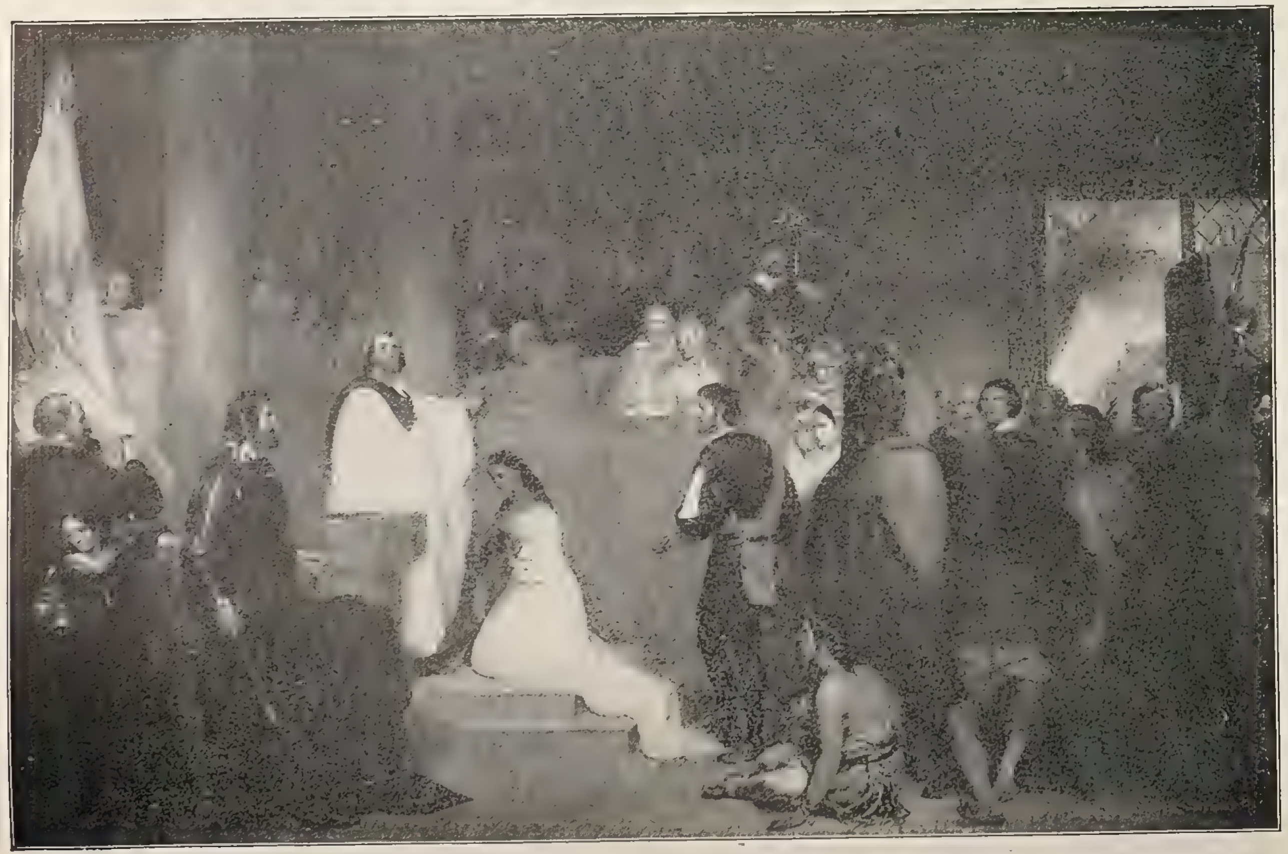
EQUESTRIAN STATUES IN THE CAPITAL CITY.



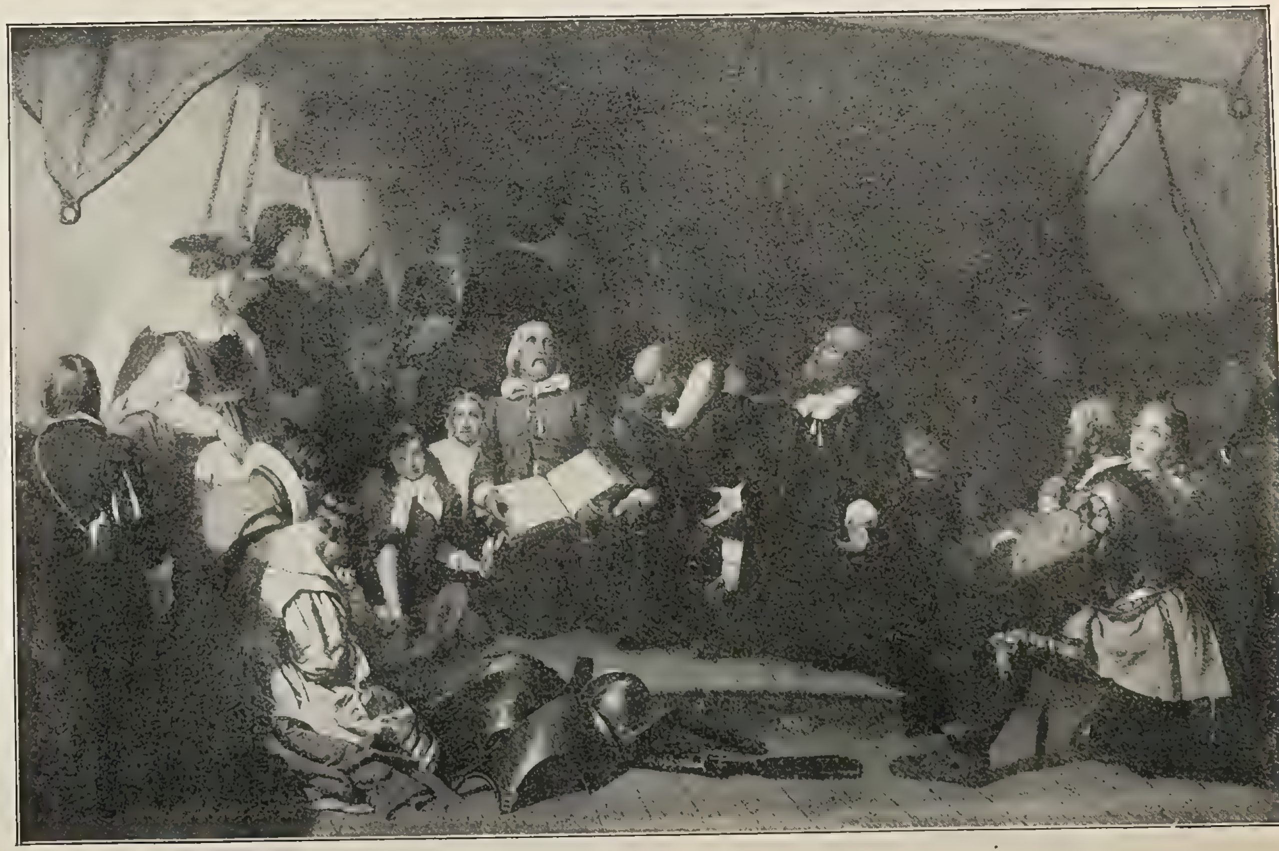
THE LANDING OF COLUMBUS AT SAN SALVADOR, OCT. 12, 1492.
By John Vanderlyn, 1839; cost, $10,000



DE SOTO'S DISCOVERY OF THE MISSISSIPPI, MAY, 1541.
By William H. Powell, 1850; cost, $12,000.

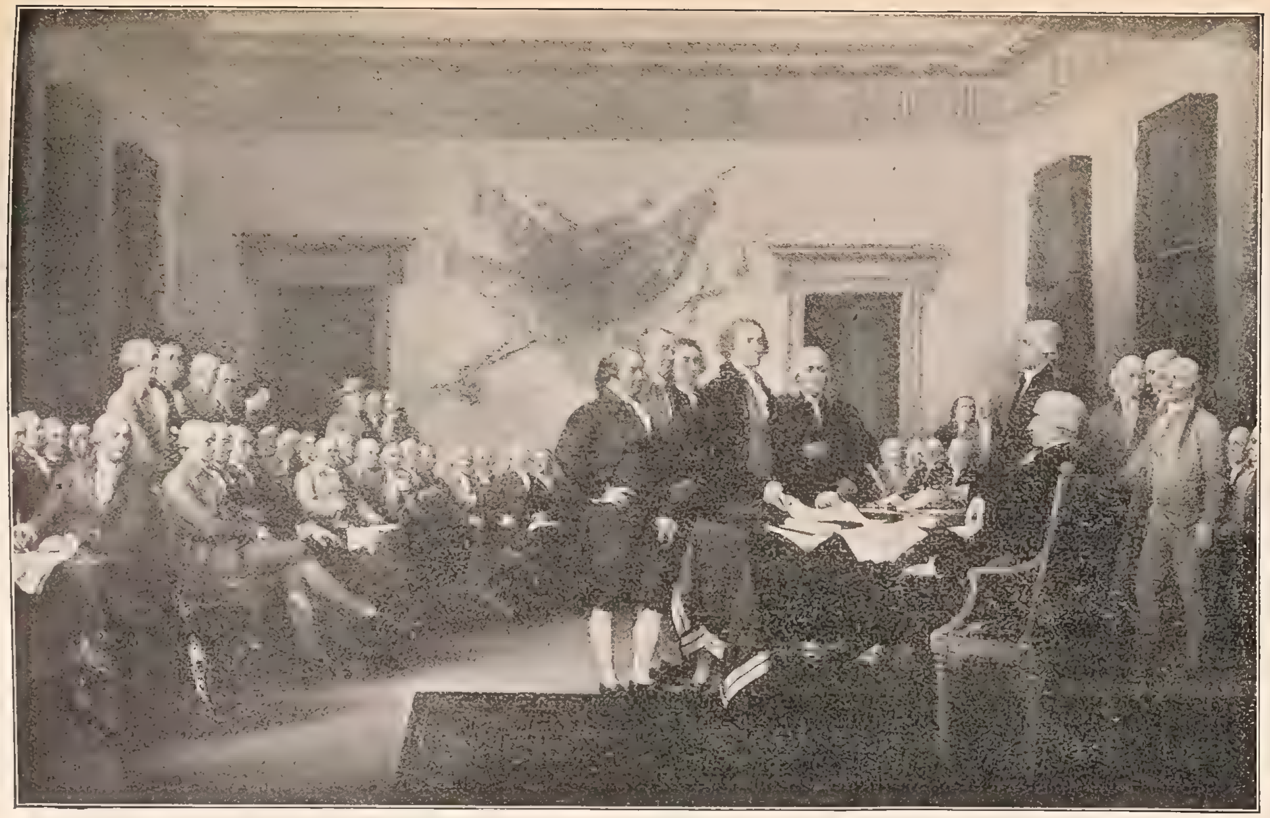


BAPTISM OF POCAHONTAS, AT JAMESTOWN, VIRGINIA, IN 1613.
By John Gadsby Chapman, 1836; cost, $10,000.

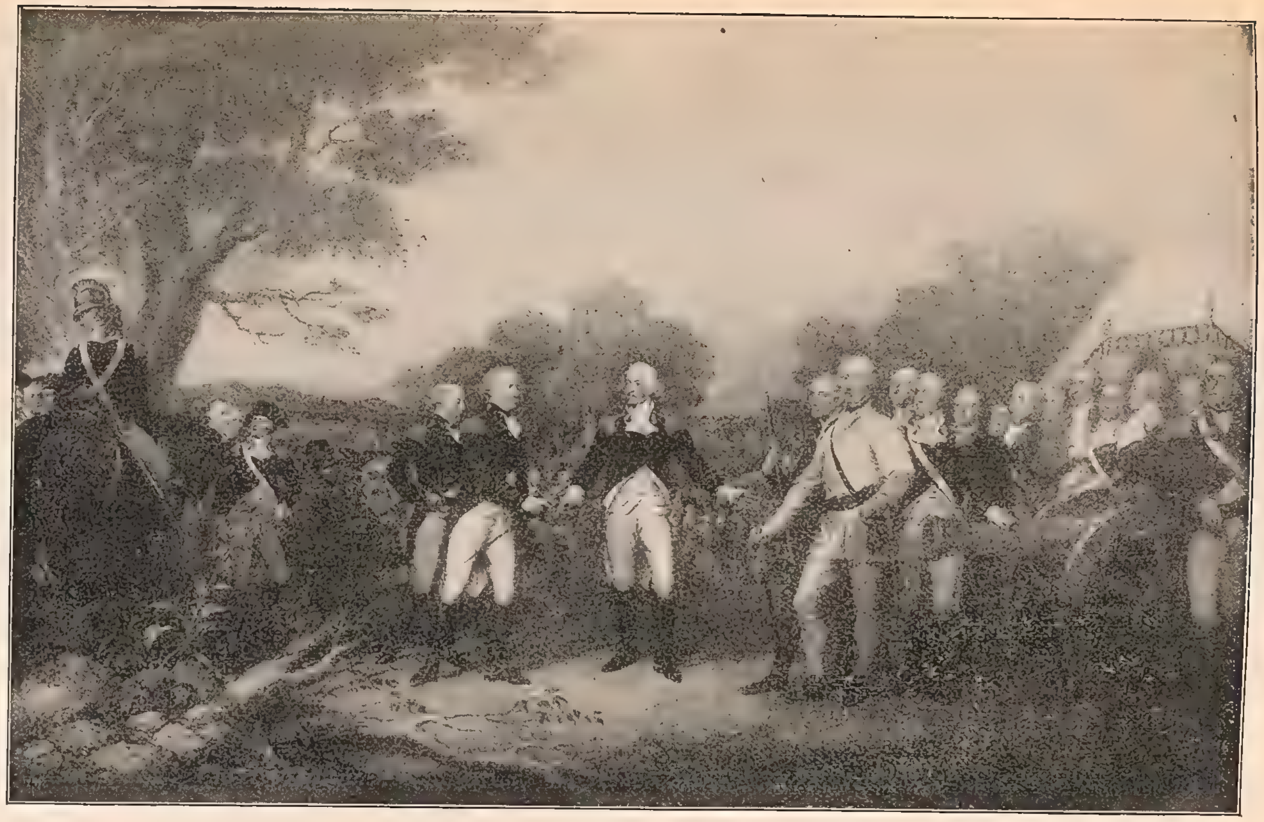


EMBARKATION OF THE PILGRIMS AT DELFT HAVEN, HOLLAND, JULY 21, 1620.
By Robert Walter Weir, 1840; cost, $10,000.

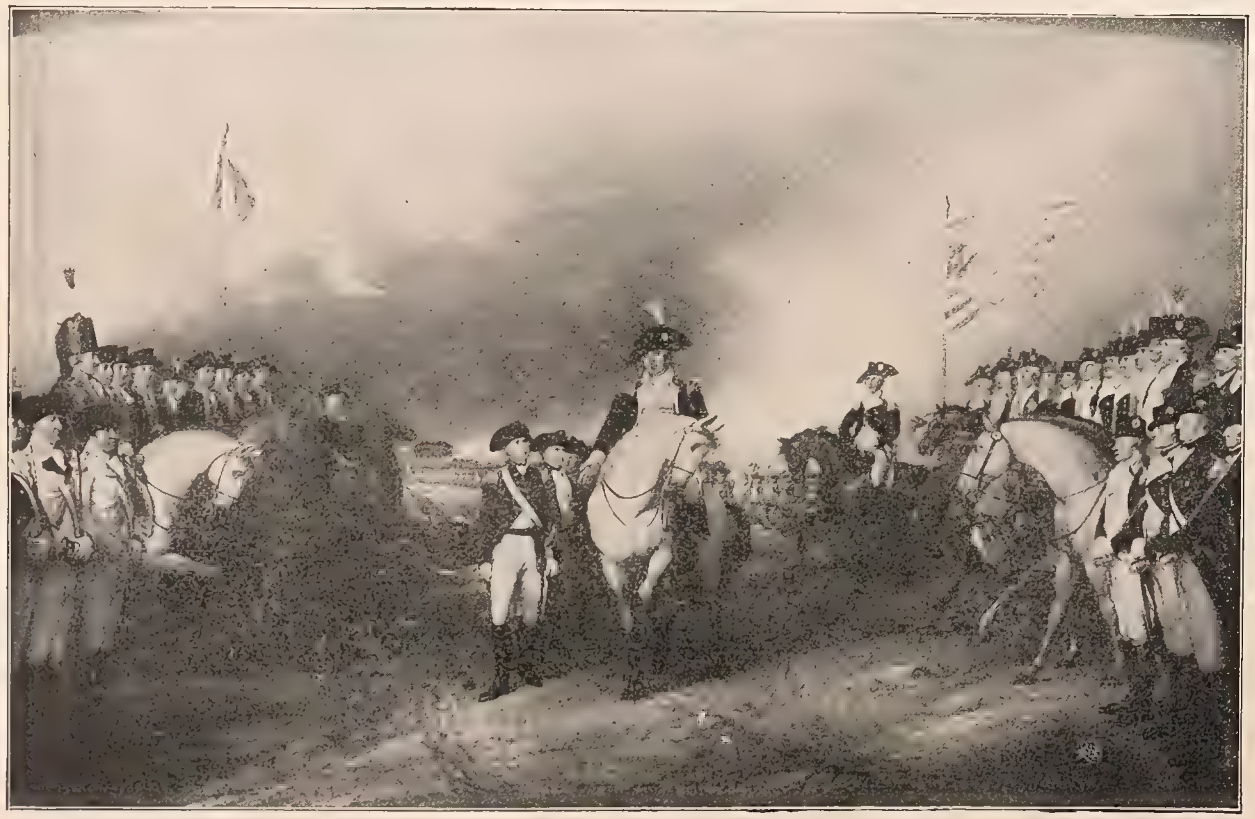
HISTORIC PAINTINGS IN THE ROTUNDA OF THE CAPITOL.



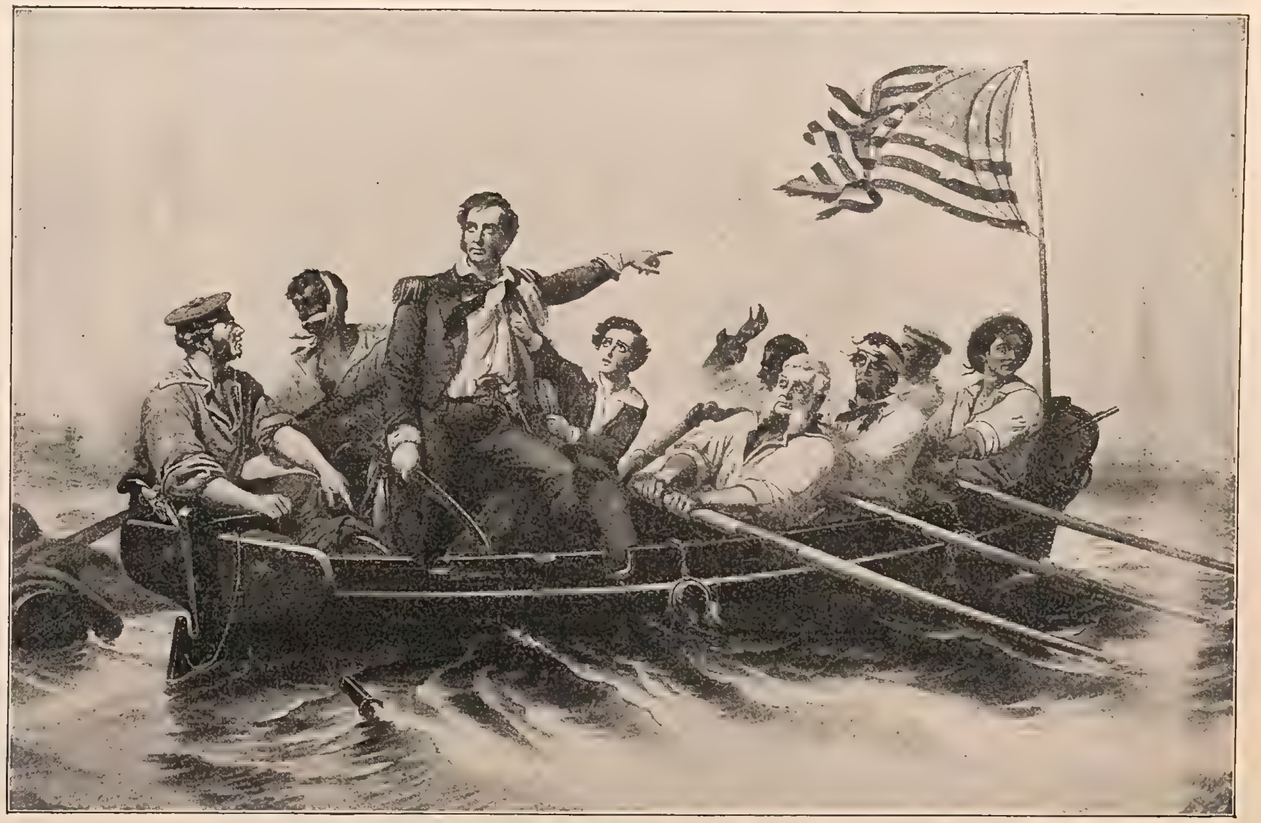
SIGNING OF THE DECLARATION OF INDEPENDENCE, PHILADELPHIA, JULY 4, 1776.
By Col. John Trumbull, about 1820; cost, $8,000.



THE SURRENDER OF BURGOYNE TO GATES, SARATOGA, OCTOBER 17, 1777.
By Col. John Trumbull, about 1820; cost, $8,000.



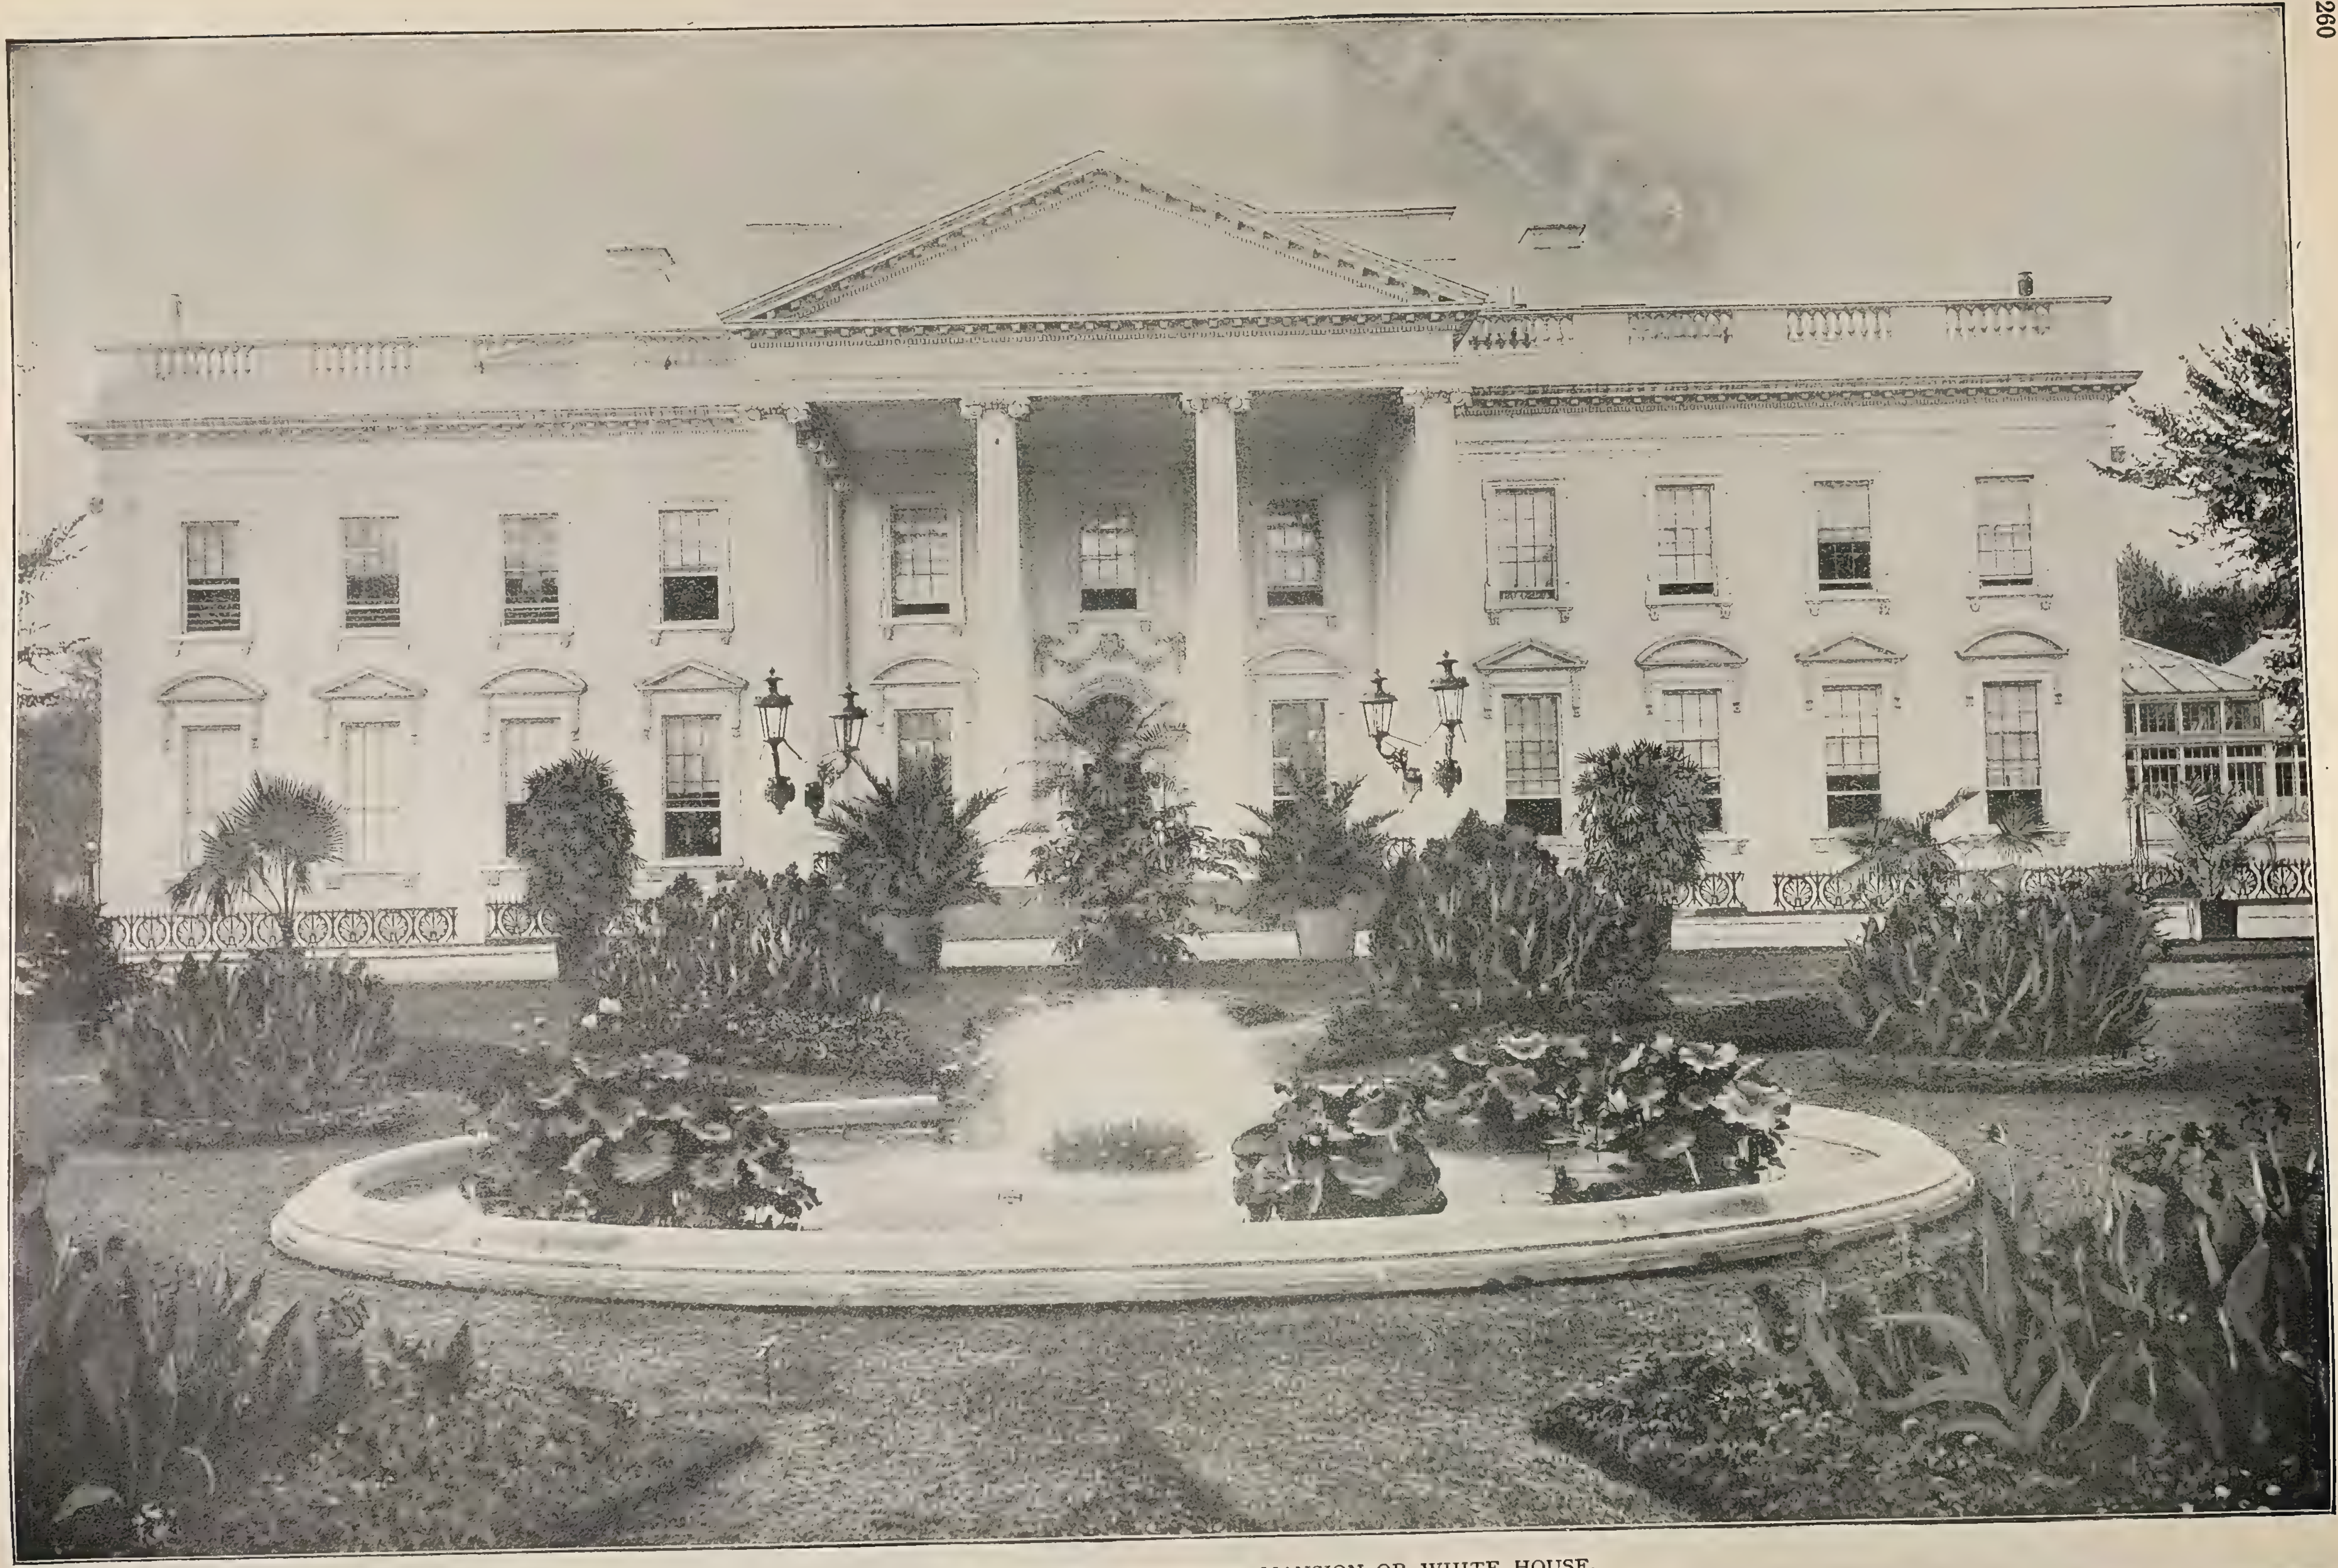
SURRENDER OF LORD CORNWALLIS AT YORKTOWN, OCTOBER 19, 1781.
By Col. John Trumbull, about 1820; cost, $8,000.



COMMODORE PERRY AT THE BATTLE OF LAKE ERIE, SEPTEMBER 10, 1813.
By William H. Powell, 1873; cost, $25,000.

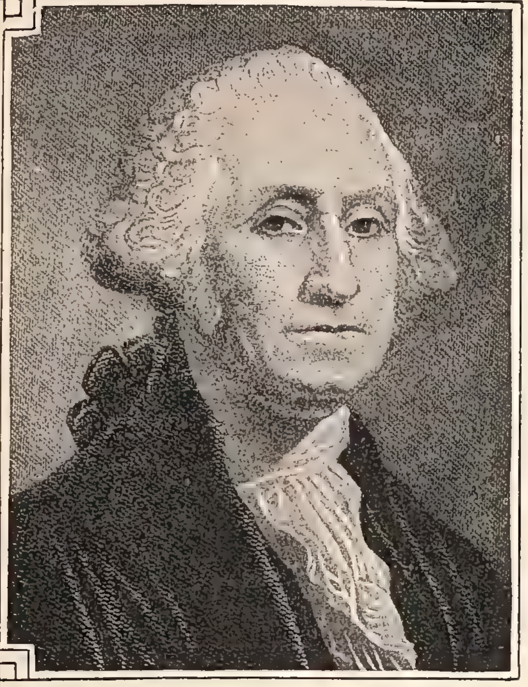
HISTORIC PAINTINGS IN THE UNITED STATES CAPITOL.

The first three of these paintings, by Col. John Trumbull, are in the Rotunda; that of Perry's victory is in the Senate Wing. Col. Trumbull, son of Jonathan Trumbull, Revolutionary Governor of Connecticut, was *aide-de-camp* to Washington and enjoyed unusual opportunities for gathering data and making portrait studies for his series of paintings, the fourth of which is "The Resignation of Washington."

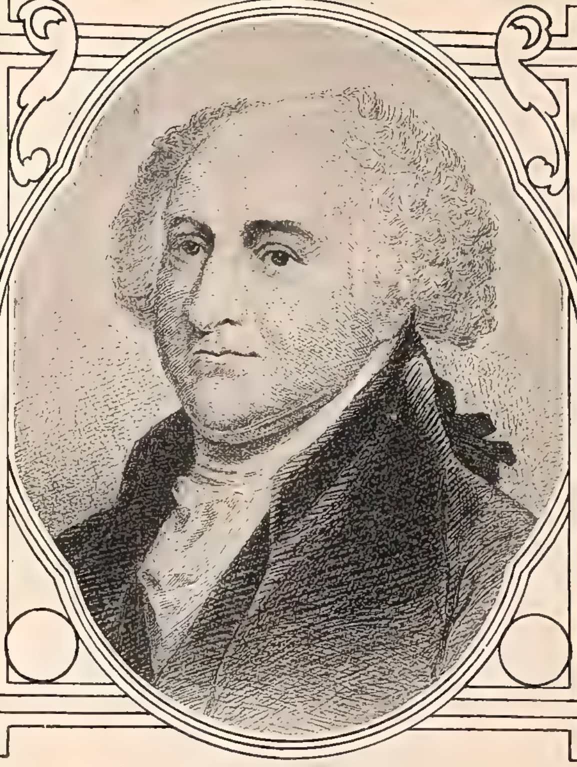


THE NORTH FRONT OF THE EXECUTIVE MANSION OR WHITE HOUSE.

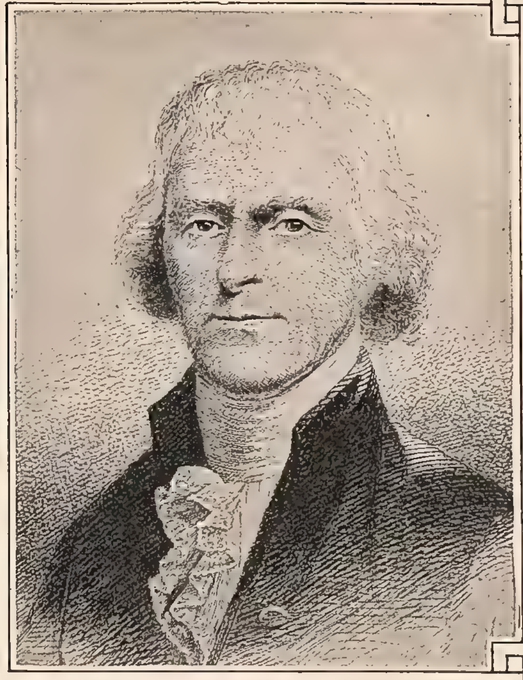
The Executive Mansion, begun in 1792 and first occupied in 1800 by President John Adams, was closely copied after the home of the Duke of Leinster, in Dublin. The main building, here shown, is one hundred and seventy feet long, eighty-six feet wide, two stories high in front, on this side, and three stories on the south side, as elsewhere pictured, because of the slope of the ground.



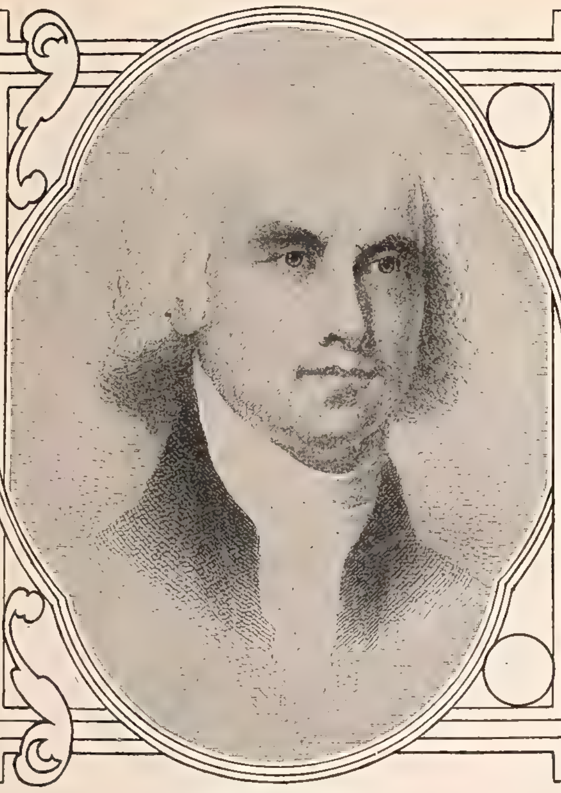
GEORGE WASHINGTON
Federalist; Virginia; 1789-1797.



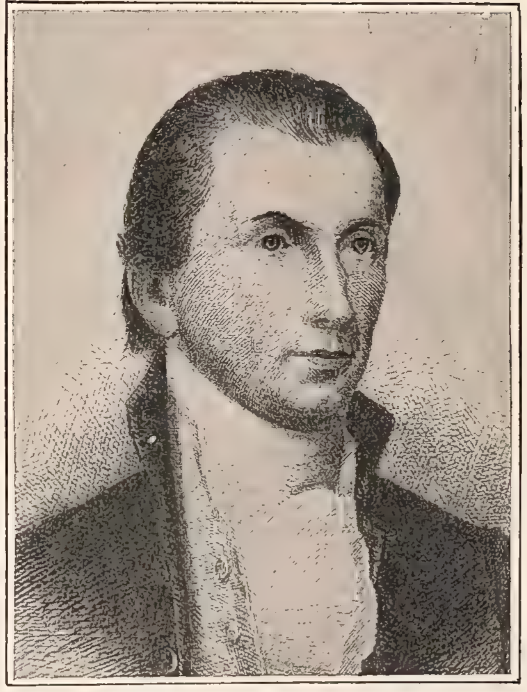
JOHN ADAMS
Federalist; Massachusetts; 1797-1801.



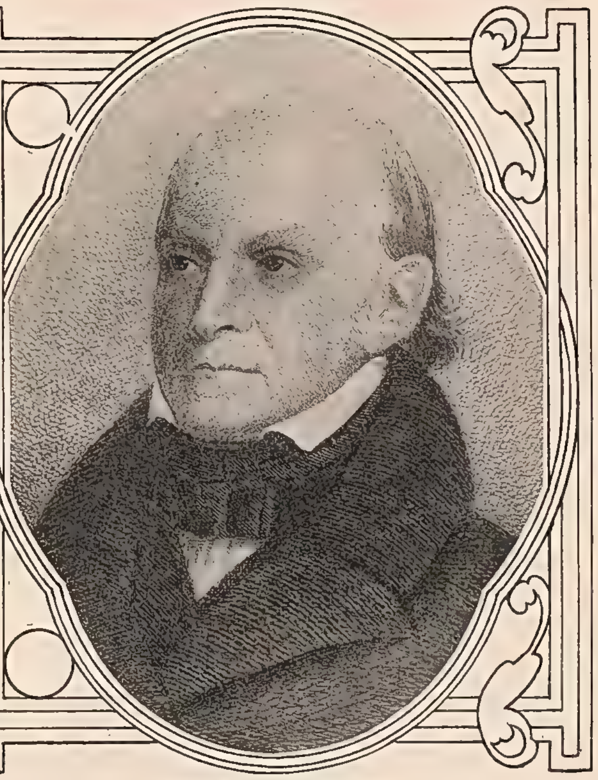
THOMAS JEFFERSON
Democratic-Republican; Virginia; 1801-1809.



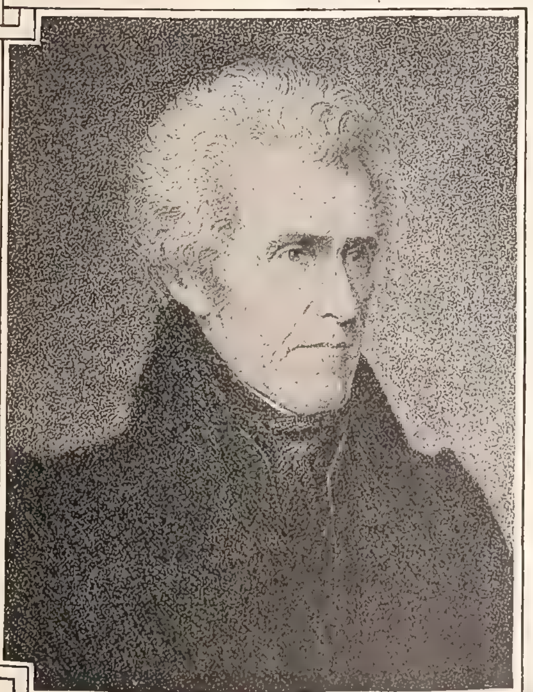
JAMES MADISON
Democratic-Republican; Virginia; 1809-1817.



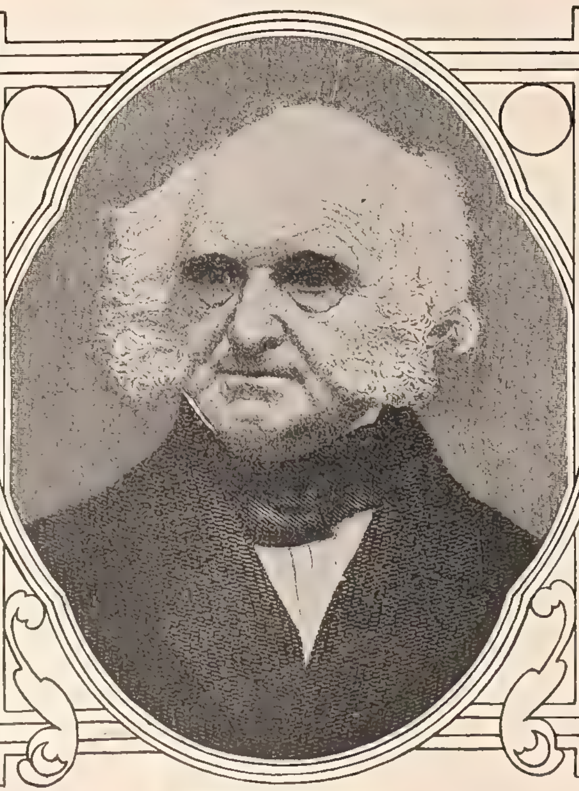
JAMES MONROE
Democratic-Republican; Virginia; 1817-1825.



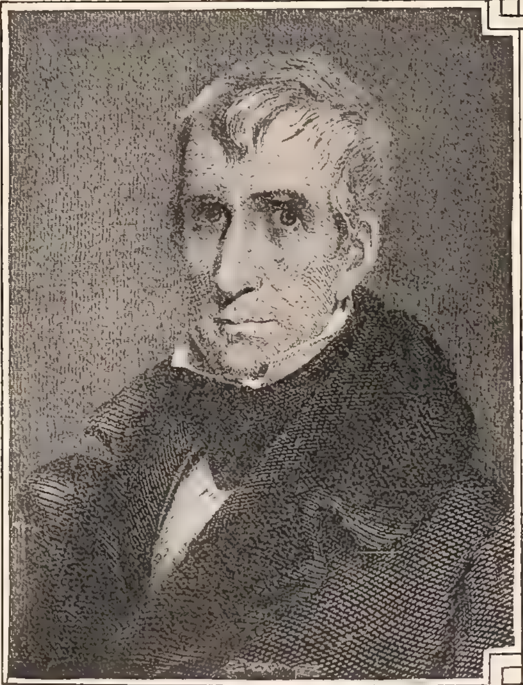
JOHN QUINCY ADAMS
National Republican; Massachusetts; 1825-1829.



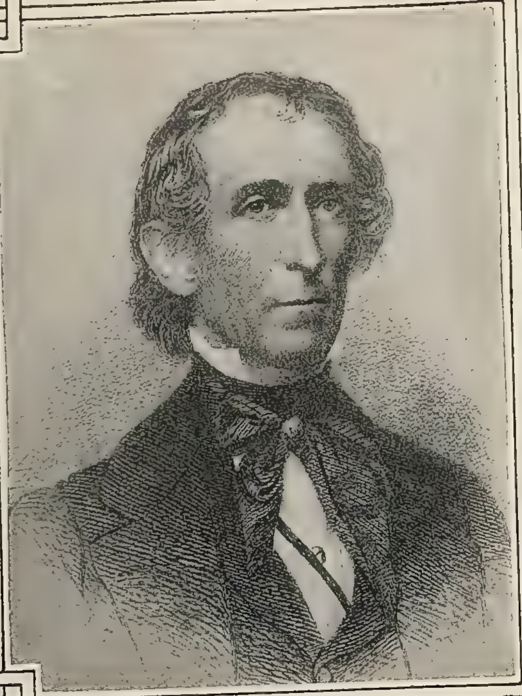
ANDREW JACKSON
Democrat; Tennessee; 1829-1837.



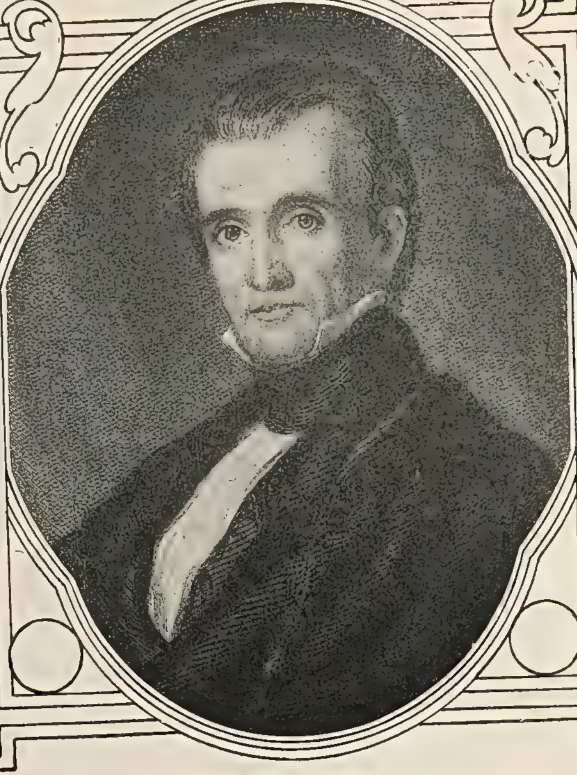
MARTIN VAN BUREN
Democrat; New York; 1837-1841.



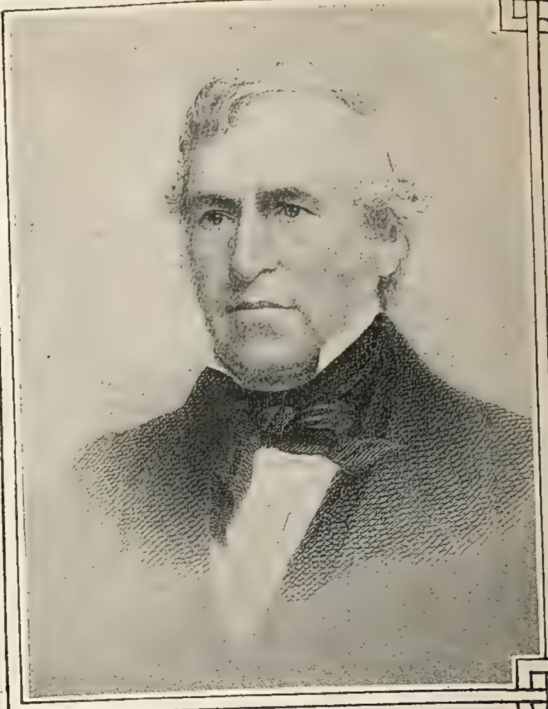
WILLIAM HENRY HARRISON
Whig; Virginia; 1841.



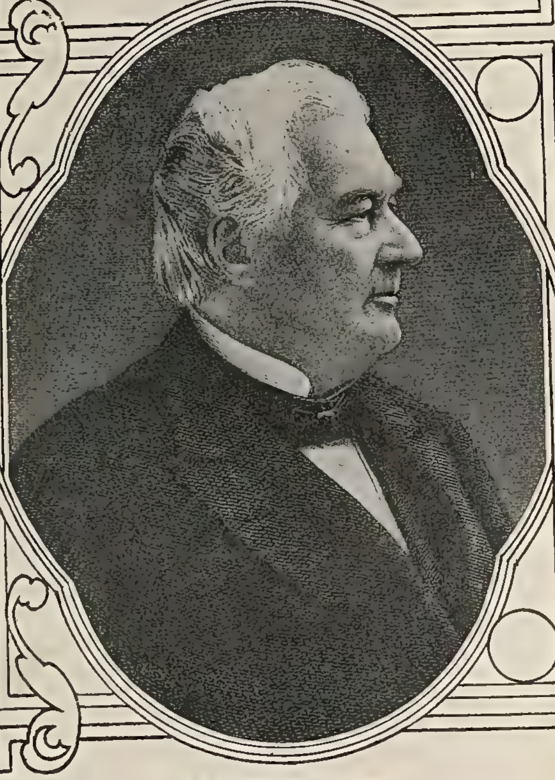
JOHN TYLER
Whig; Virginia; 1841-184



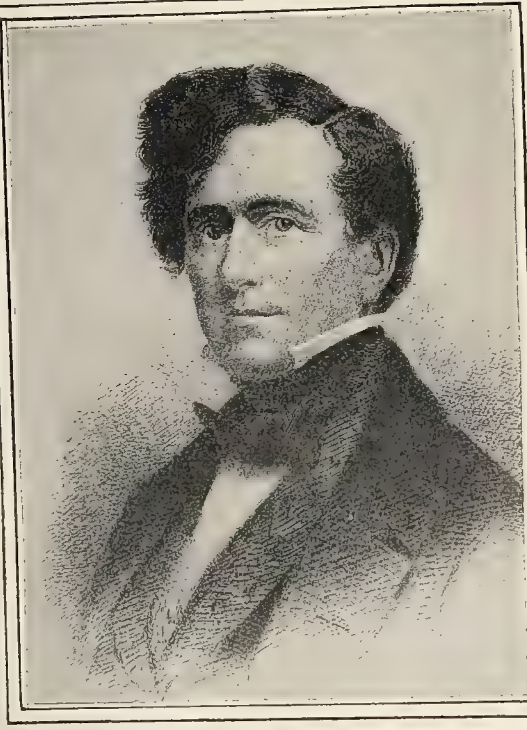
JAMES K. POLK
Democrat; Tennessee; 1845-1849.



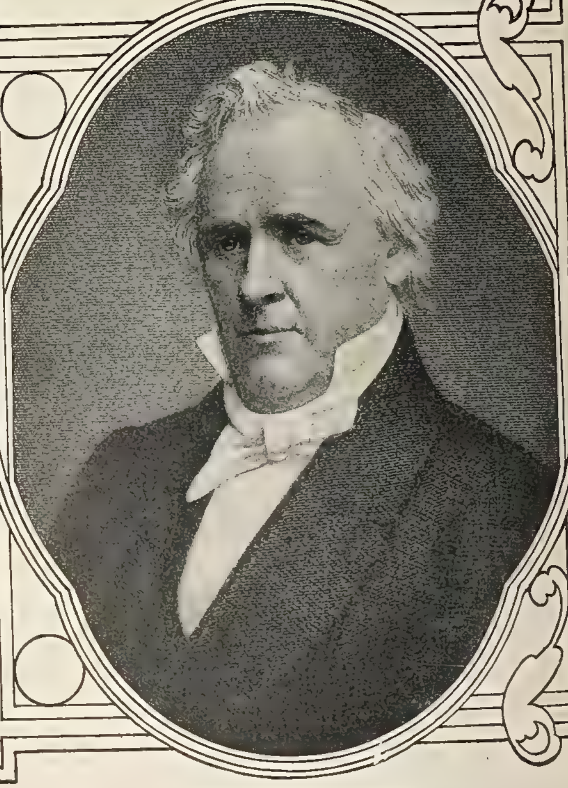
ZACHARY TAYLOR
Whig; Louisiana; 1849-1850.



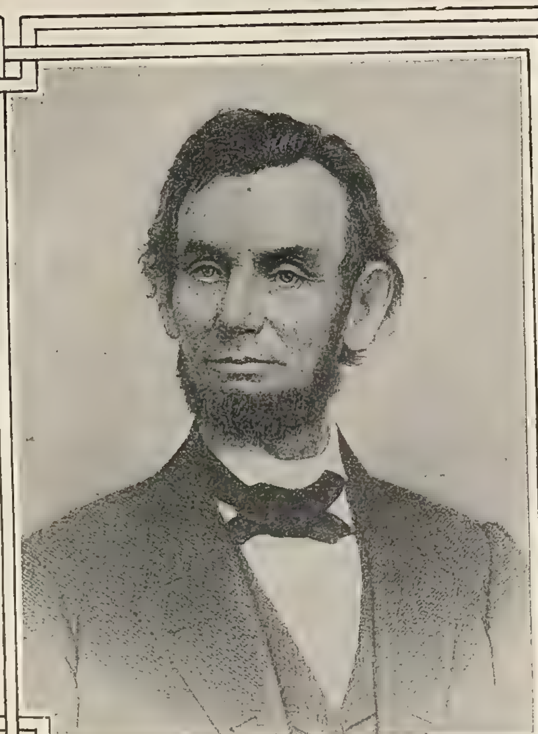
MILLARD FILLMORE
Whig; New York; 1850-1853.



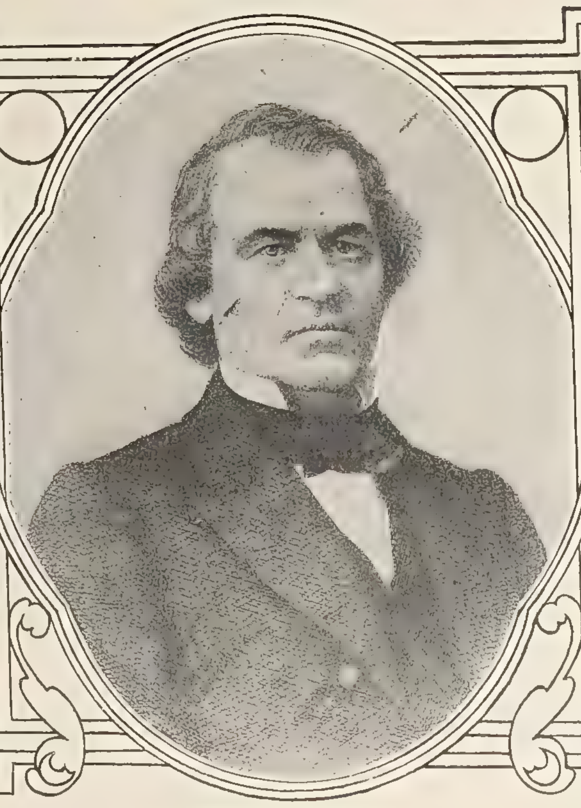
FRANKLIN PIERCE
Democrat; New Hampshire; 1853-1857.



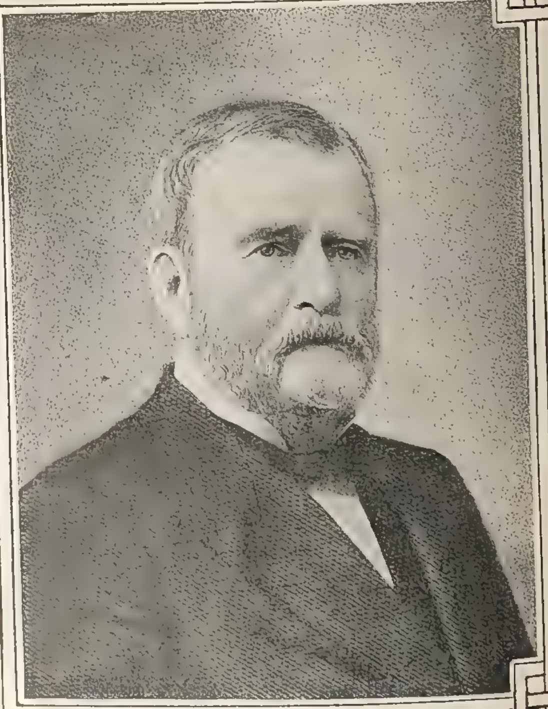
JAMES BUCHANAN
Democrat; Pennsylvania; 1857-1861.



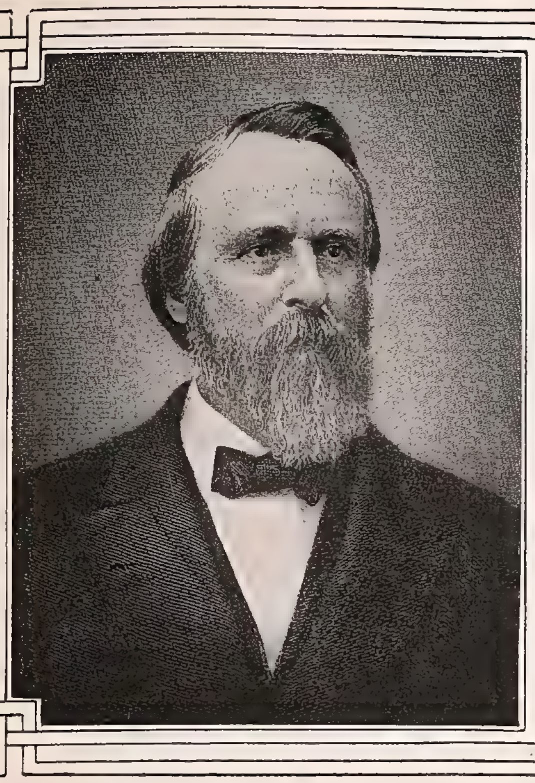
ABRAHAM LINCOLN
Republican; Illinois; 1861-1865.



ANDREW JOHNSON
Republican; Tennessee; 1865-1869.

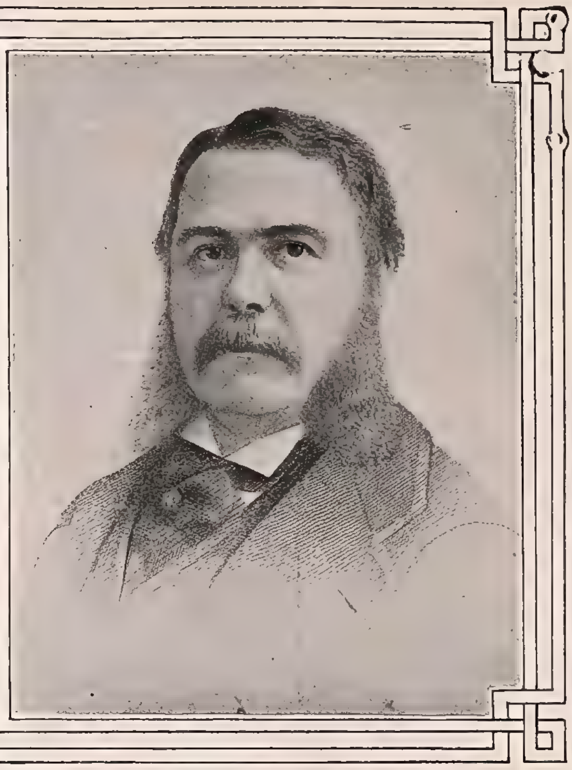


ULYSSES S. GRANT
Republican; Illinois; 1869-1877.



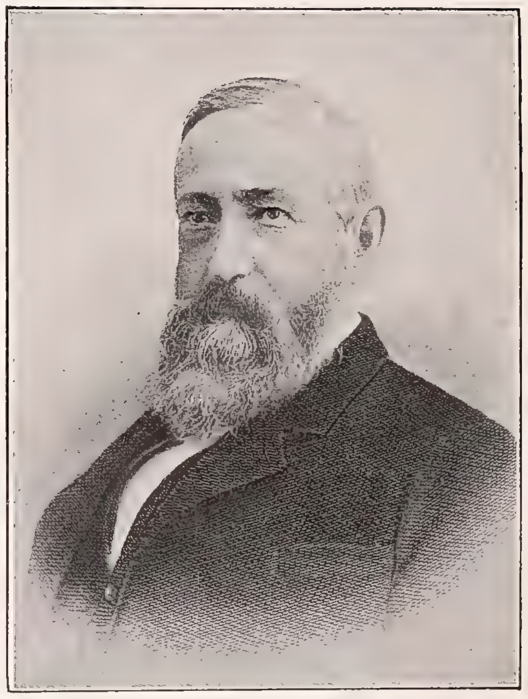
RUTHERFORD B. HAYES
Republican; Ohio; 1877-1881.

JAMES A. GARFIELD
Republican; Ohio; 1881.

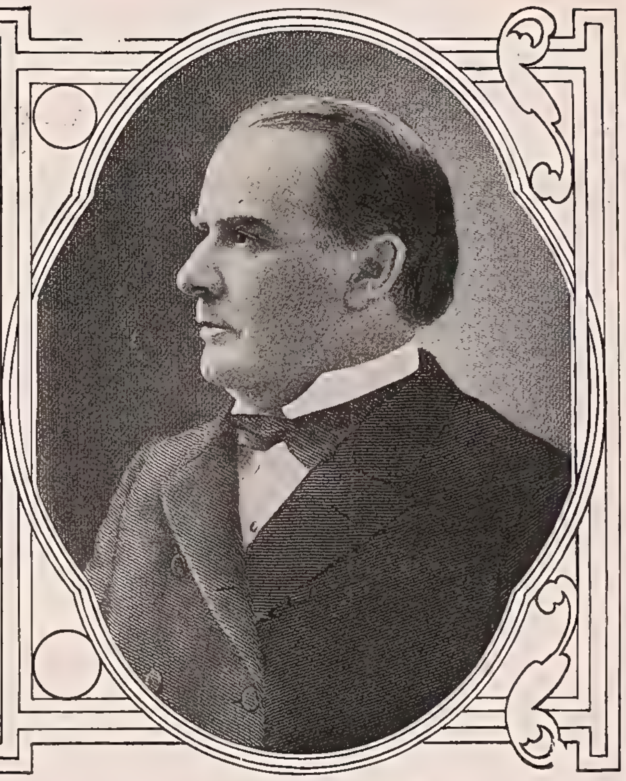


CHESTER A. ARTHUR
Republican; New York; 1881-1885.

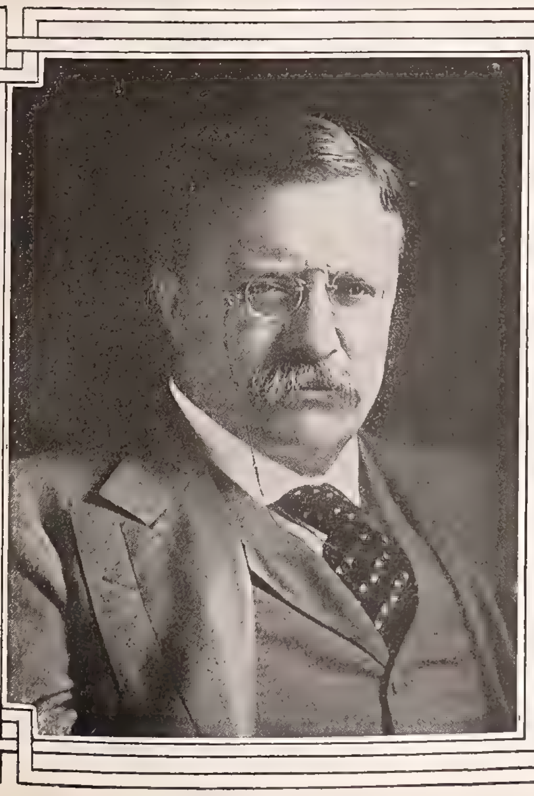
GROVER CLEVELAND
Democrat; New York; 1885-89 and 1893-97.



BENJAMIN HARRISON
Republican; Indiana; 1889-1893

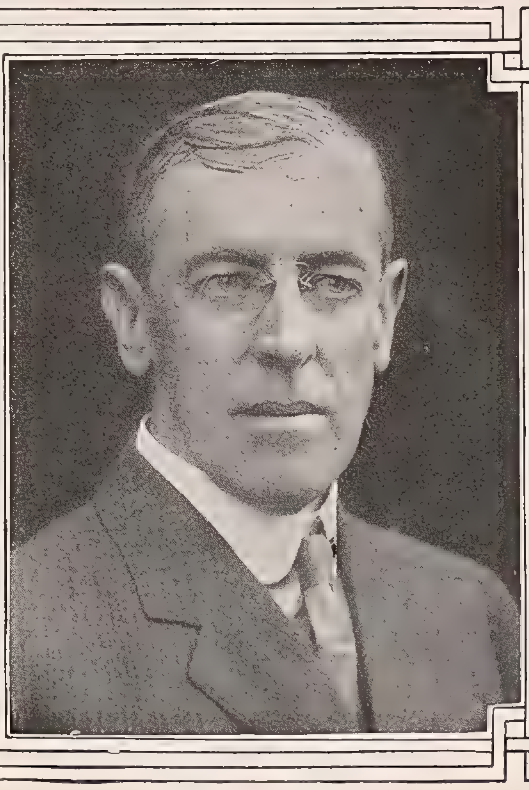


WILLIAM McKINLEY
Republican; Ohio; 1897-1901.



THEODORE ROOSEVELT
Republican; New York; 1901-1909.

WILLIAM HOWARD TAFT
Republican; Ohio, 1909-1913.



WOODROW WILSON
Democrat, New Jersey, 1913-1921

Physical, Commercial and Political Analysis of the World and its Various Divisions

THE WORLD

Its History, Description and Statistics in Pointed and Concise Facts.

The earth is very nearly a spheroid. One degree of latitude at the equator is 69.407 miles; one degree of latitude at the poles is 68.704 miles. Circumference, 24,900 miles. Area of surface, 196,791,000 square miles; cubic contents, 259,944,035,515 cubic miles. Fertile regions 29,000,000 square miles; steppes, 14,000.000 square miles; deserts, 4,861,000 square miles; and polar regions, 6,970,000 square miles.

Land area by continents is as follows: Africa, 11,513,579 square miles; North America, 8,037,714 square miles; South America, 6,851,306 square miles; Asia, 17,057,666 square miles; Oceania, 3,456,290 square miles; Europe, 3,754,282 square miles; Polar regions, 6,970,268 square miles; a total of 57,641,175 square miles.

The highest points above sea level on the continents are Mount Everest, 29,002 feet, Asia; Mount Aconcagua, 22,868 feet, South America; Mount McKinley, 20,300 feet, North America; Kilmanjaro, 19,720 feet, Africa; Mont Blanc, 15,781 feet, Europe; and Mount Kosciusko, 7,350 feet, Australia.

The lowest points below sea level are Dead Sea, 1,290 feet, Asia; Death Valley, 276 feet, North America; Desert of Sahara, 150 feet, Africa; Caspian Sea, 86 feet, Europe; and Lake Torrens, 25 feet, Australia.

Water area by oceans is estimated as follows: Antarctic Ocean, 5,731,350 square miles; average depth, 10,800 feet. Arctic Ocean 4,632,000 square miles. Atlantic Ocean, 34,801,400 square miles; greatest depth, Nare's Deep, to the north of West Indies, 27,972 feet. Indian Ocean, 17,084,000 square miles; greatest depth, 21,968 feet. Pacific Ocean, 67,699,630 square miles; greatest depth, the deepest trench yet discovered is off Mindanao, Philippine Islands, 32,088 feet. Seven other soundings in the Pacific show depths greater than 30,000 feet. From the bottom of the deepest hole in the seas to the top of the highest peak on the land, Mount Everest, there is a range of 61,090 feet, which on a globe six feet in diameter would be represented by the tenth of an inch.

The mean annual temperature of the globe is about 59 degrees Fahrenheit. The average rainfall is 36 inches. Climate of Western Hemisphere a little colder in same latitudes than that of Eastern Hemisphere, and is also more moist, particularly in the Tropics. Rainfall unevenly distributed, being more plentiful in warm than cold countries, seacoasts than in inland regions, and in mountainous dstricts than in lowlands. Punji, Assam, India, is the wettest place in the world; in 1861 the rainfall there reached 905 inches; sometimes over 20 feet falls during the month of June. Snow line near the poles at sea-level; at the Equator about 16,000 feet.

The governments of the human family are divided into three classes: Absolute Monarchies, Limited Monarchies and Republics.

The population of the world by continents is as follows: Africa, 142,000,000, per square mile 12; North America, 145,000,000, per square mile, 18; South America, 63,000,000, per square mile, 8.8; Asia, 830,000,000, per square mile, 47; Oceania, 64,000,000, per square mile, 2.31; Europe, 484,000,000, per square mile, 129; a total of 1,730,000,000, per square mile, 30.

World's population according to race: White (Indo-Germanic or Aryan), located in Europe, America, Persia, India and Australia, 775,000,000. White (Semitic), located in Africa, Arabia, etc., 65,000,000. Yellow and Brown (Mongolian or Turanian), located in Asia, 682,000,000. Brown (Malay and Polynesian), 35,000,000. Red and Half Breeds (North and South American Indian), 25,000,000. Total, 1,700,000,000.

Numbers in the world according to creed are as follows: Christianity, 564,510,000; Confucianism and Taoism 300,830,000; Mohammedanism, 221,825,000; Hinduism, 210,540,000; Animism, 158,270,000; Buddhism, 138,031,000; Shintoism, 25,000,000; Judaism, 13,052,846; Unclassified, 15,280,000. Christianity divided into Roman Catholics, 272,860,000; Eastern or Greek Catholics, 120,000,000; and Protestants, 171,650,000.

There are said to be 3,424 spoken languages or dialects in the world; distributed as follows: America, 1,624; Asia, 937; Europe, 587; Africa, 276. Chinese is spoken by more than 400,000,000; English, 150,000,000; German, 120,000,000; Russian, 90,000,000; French, 60,000,000; Spanish, 55,000,000; Italian, 40,000,000; and Portuguese, 30,000,000. The English language contains approximately 600,000 words, one-half consisting of scientific terminology, and of archaic and obsolete terms; German, 150,000; French, 210,000; Russian, 140,000; Spanish, 120,000; and Italian, 140,000. Languages chiefly used in international commerce: English, French, Spanish and German. In international discussions and diplomatic affairs, French is most generally used.

ARCTIC REGIONS.

Arctic Ocean, lies about the North Pole, is partially enclosed by Europe, Asia, North America and Greenland, communicates with the Pacific Ocean by Bering Strait, and is open to the Atlantic. It is generally regarded as extending southward to the Arctic Circle. Among the lands in it are Greenland, Nova Zembla, Spitsbergen, Franz Josef Land, Jan Mayen, New Siberia, Wrangell Land and the Arctic Archipelago of North America.

Area of land within the Arctic Circle is about 1,235,000 square miles.

The first man to reah the North Pole was the American Commander Robert E. Peary, who planted the stars and stripes there on April 6, 1909.

Arctic Archipelago of North America.—Group of islands, forming part of Canada. Estimated area, 502,440 square miles; entirely within the Arctic Circle, 416,000 square miles; estimated population 1,000.

Greenland.—An island, northeast of North America, belonging to Denmark. Discovered by Norsemen about 900. So named by Eric the Red with the intent of attracting immigrants from Iceland. It was visited by Eric the Red and colonized by him in 986. It was rediscovered by Davis in 1585, and recolonized by the Danes in 1721. Recent explorers have been Kane, Hall, Nares, Greely, Nansen and Peary. In the interior is a plateau covered with an ice-cap, with the highest point about 10,000 feet. Area, 46,740 square miles. The climate is very severe; the whole country is icebound from about October to about June. Population, 13,517, mostly Eskimos, about 350 Europeans. Whale and seal fishing is largely engaged in. The largest settlement in Greenland is Sydproven, population 766, and the smallest is Skansen, in North Greenland, population 46.

Nova Zembla.—Novaya Zemlya.—An uninhabited double island, situated north of Russia, to which it belongs. It is separated from the mainland by Kara Sea. Discovered by the English in the middle of the 16th century; explored during 1821-24; visited in late years by numerous expeditions. Surface is elevated and mountainous, the northern part covered by an ice-sheet. Is visited by huntsmen and fishermen. Length, about 600 miles. Area, 35,163 square miles.

Franz Josef Land.—An archipelago north of Nova Zembla, discovered and explored by Payer in 1873. Visited by numerous expeditinos. Uninhabited. Estimated area, 20,000 square miles.

Crocker Land.—First sighted by Peary in 1906. It is supposed to be the most northerly land on the globe.

Nicholas II Land.—In latitude 81 deg. north, and longitude 102 deg. east, extending fodm about 60 miles north of Cape Chelyuskin for a distance of some 200 nautical miles. Discovered by Commander Wilkitzky of Russian navy, during July and August, 1913. Surface mountainous and covered with snow almost to the sea.

Arctic, or North Polar Record.

Year	Explorer	Deg.	Min.
1871	Capt. Hall	82	16
1876	Capt. Nares	83	10
1879	Lieut. De Long	77	15
1882	Lieut. Greely	83	24
1890	Lieut. Peary	83	50
1891	Lieut. Peary	83	24
1895	Fridtjof Nansen	86	14
1900	Duke d'Abruzzi	86	33
1902	Lieut. Peary	84	17
1904	Anthony Fiala	83	13
1906	Commander Peary	87	6
1909	Commander Peary	90	Pole

The new land discovered by Stefanson lies at 73 deg. 43 min. north lat. and 115 deg. 43 min. west long.

ANTARCTIC REGIONS.

Antarctic Ocean is that part of the ocean at the south pole, which is included within the Antarctic Circle. An open sea, no intervening lands separating its waters from the Atlantic, Pacific and Indian Oceans. Lands within Antarctic regions are very hard of access. Ice barriers block the way to exploration at a latitude of 5 degrees lower than that of Arctic regions. Antarctic icebergs are found 10 or 15 degrees nearer Equator than those from the Arctic, which reach as far south as the 40th parallel; lower temperatures are recorded in the Arctic, and south of the 62nd parallel the mean temperature for both air and sea is always below 32 deg. Fahrenheit.

Antarctic, or South Polar Record.

Year	Explorer	Deg.	Min.
1774	Capt. Cook	71	15
1823	Capt. Weddell	74	15
1842	Capt. Ross	77	49
1895	Borchgrevink	74	10
1898	De Gerlache	71	36
1900	Borchgrevink	78	50
1902	Capt. Robt. F. Scott	82	17
1909	Lieut. Shackleton	88	23
1911	Roald Amundsen	90	Pole
1912	Capt. Robt. F. Scott	90	Pole

Capt. Robt. F. Scott, leader of the British Antarctic expedition, met a tragic death in March, 1912, after he had succeeded in reaching the South Pole. Four of his companions, Dr. E. A. Wilson, Lieut. H. R. Bowers, Capt. L. E. G. Oates and Petty Officer E. Evans shared his fate.

Dr. Douglas Mawson, the Austrian explorer, and six companions who were forced to spend the winter of 1913-14 on Adelie land, returned to Australia, Feb. 26, 1914. The scientific results of the expedition included the mapping of newly discovered lands, the landing of extraordinary marine fauna at a depth of two miles, and the discovery of copper beds and coal fields.

PRINCIPAL ISLANDS IN THE ATLANTIC OCEAN.

Annabon, Corisco, Fernando Po, Great Elobey and Little Elobey Islands.

Area, 814 square miles. Population, 23,844.
Population per square mile, 28.06. Capital, Santa Isabel.

Islands in the Gulf of Guinea, on the west coast of Africa, belonging to Spain. Discovered by the Portuguese in 1471, and were ceded to Spain in 1778. The surface is generally mountainous; vegetation luxuriant. Clarence Peak, 10,190 feet, is located on Fernando Po.

Ascension Island.

Area, 34 square miles. Population, 196.
Population per square mile, 5.07. Capital, Georgetown.

A volcanic island, belonging to Great Britain, 800 miles northwest of St. Helena Island. It was discovered by the Portuguese in 1501, and named Conception Island, and re-discovered on Ascension Day, 1508, when the present name was given to it. It was occupied by Great Britain in 1815. The island is the resort of the sea turtle, which come in thousands to lay their eggs in the sand annually between January and May. They are stored in ponds, and eventually killed and distributed among the people.

Azores, or Western Islands.

Area, 922 square miles. Population, 242,613.
Population per square mile, 277.9. Capital, Angra.

A group of islands 800 miles west of and an integral part of Portugal. So called from the hawks found there. They were occupied by Portugal in 1432, and colonized by Portuguese and Flemings in the 15th century. The surface is volcanic and mountainous, and the soil fertile, producing oranges, wine, etc. The islands are a noted health-resort.

Bahama Islands.

Area, 4,404 square miles. Population, 55.944.
Population per square mile, 12.07. Capital, Nassau.

A group of twenty inhabited and many uninhabited islands and rocks off the southeast coast of Florida. Discovered by Columbus in 1492; were occupied by the British in 1629; and were finally secured to them in 1783. Sisal is the mainstay of the colony, and fruit culture is on the increase, while lumber mills are prosperous.

Bermudas.

Area, 19.3 square miles. Population, 21,840.
Population per square mile, 11. Capital, Hamilton.

A group of islands, a British crown colony, about 600 miles east-southeast of Cape Hatteras; an important naval and strategic possession. Discovered by Juan Bermudez about 1522, and settled by the British in 1611. They comprise about 360 islets and rocks; are much visited as a health resort, and produce onions, tomatoes and Easter lilies.

Canary Islands.

Area, 2,807 square miles. Population, 469,768.
Population per square mile, 127.5. Capital, Santa Cruz de Santiago.

A group of islands lying northwest of Africa. They belong to Spain and form a separate province; supposed to be the ancient Fortunate Islands. The original inhabitants, the Guanches, are now extinct. The islands were conquered by Spain in the 15th century.

Cape Verde Islands.

Area, 1,480 square miles. Population, 149,793.
Population per square mile, 97.25. Capital, Porto Praya.

A group of islands lying west of Cape Verde, Africa, belonging to Portugal. They are mountainous and volcanic. Discovered and colonized by the Portuguese in the middle of the 15th century; the inhabitants are mostly negroes. Chief products are coffee, medicinal products and millet.

Falkland Islands, and South Georgia.

Area, 7,500 square miles. Population, 6,498.
Population per square mile, .08. Capital, Stanley.

A group of islands, situated east of Patagonia, South America, and is a British crown colony. Discovered by John Davis in 1592, were settled by the French in 1763, and were seized by the British in 1765, and later by the Spanish. They have been a British possession since 1833. It comprises East and West Falkland, Georgia, and about 100 small islands. Other dependencies are the South Orkneys, South Shetlands, the Sandwich group and Graham's land.

Faroe Islands.

Area, 540 square miles. Population, 18,000.
Population per square mile, 33. Capital, Thorshavn.

A group of 24 islands, belonging to Denmark, located between the Shetland Islands and Iceland. The islands were colonized by Norwegians in the 9th century.

Iceland.

Area, 39,756 square miles. Population, 85,188.
Population per square mile, 2.10. Capital, Reykjavik.

A sovereign state united with Denmark, about 160 miles east of Greenland. Iceland was settled in part by Irish monks about 795, and was mainly settled by Northmen about 870-930. The island was united to Norway in 1262, and passed to Denmark in 1580. It was celebrated for its literary productiveness in the 12th and 13th centuries. The surface is generally mountainous, and it is noted for its volcanoes and glaciers. The leading occupation is the raising of cattle. Iceland, which had remained undiscovered till long after the days of Charles, was, down to the year 1262, the only absolutely free republic in the world.

Madeira Islands.

Area, 314 square miles. Population, 169,777.
Population per square mile, 479.5. Capital, Funchal.

A group of islands, considered an integral part of Portugal, northwest of Africa. The islands were visited by the Portuguese in 1419, and colonized by them about 1420; occupied by the British in 1801, and from 1807 to 1814. The surface is mountainous and picturesque, and noted as a health resort. Chief products are wine and sugar.

Saint Helena.

Area, 47 square miles. Population, 3,654.
Population per square mile, 75. Capital, Jamestown.

An island, belonging to Great Britain, about 1,200 miles west of Africa, 1,800 miles east of South America, and 820 miles from Ascension, the nearest land. Discovered by the Portuguese in 1501; became a British possession in 1651, and is celebrated as the place of imprisonment of Napoleon, who resided here at Longwood, 1815-21. It is of volcanic origin. Fruit trees, Norfolk pines, eucalyptus, and cedars flourish at St. Helena. Cattle do well, but there is no outside market for the meat. Flax is largely grown.

Tristan da Cunha.

A group of three islands and two islets, half-way between the Cape of Good Hope and South America, and are of volcanic formation. The group includes Tristan, Inaccessible, Nightingale and Gough's islands, and a number of rocks. Discovered by the Portuguese in 1506, and were taken by the British in 1816. Highest peak, about 8,500 feet.

Virgin Islands (U. S.)

See United States Possessions.

PRINCIPAL ISLANDS IN THE PACIFIC OCEAN.

Bismarck Archipelago (Formerly German).

Area, 20,000 square miles. Population, 189,081.

The chief islands are New Britain, New Ireland, Duke of York, Neu Hanover, Admiralty, Anchorite, Commerson, Hermit and others. Came into German possession in 1884. Occupied by Great Britain September, 1914. To Australia under mandate in 1919.

Caroline Islands.

Area, 560 square miles. Population, 55,264.
Capital, Eastern Carolinas, Ponape.
Capital, Western Carolinas, Yap.

An archipelago, east south-east of the Philippine Island, and north of New Guinea. Originally owned by Spain, but passed to German possession in 1899, occupied by Japanese in 1914, and now held by Japan under mandate. They consist of about 500 coral islets, the largest of which are Ponape, Yap and Kusai. The Pelew, or Palaos Islands, to the west of the Carolinas, are about 26 in number, mostly coral, many of them uninhabited. The Marianne Islands, to the north of Pelew, are actively volcanic and the northern group is uninhabited. Recognition of Japanese mandate over Yap Island was refused by the U. S. with demand that it be made an international cable station. Occupies a strategic position to the Philippines.

Easter Island.

An island west of Chile. It is noted for its gigantic pre-historic statues.

Ellice Islands.

Area, 14 square miles. Population, 3,095.
Population per square mile, 221.

A group of small coral islands, north of the Fiji Islands, and northwest of Samoa. Discovered by Captain Peyster, an American, in 1819. United with Gilbert Islands under name Gilbert and Ellice Island Colony.

Fanning Islands.

Area, 15 square miles. Population, 150.

Population per square mile, 10.

A group of islands, extending from Palmyra to Christmas Island, belonging to Great Britain. Discovered by Captain Edmund Fanning, an American sailor.

Fiji Islands (Including Rotuna Island).

Area. 7,083 square miles. Population, 163,416.

Population per square mile, 20.68. Capital, Suva.

Fiji comprises a group of about 250 islands, 80 of which are inhabited. The largest is Viti Levu, with an area of 4,053 square miles; next is Vanua Levu, area 2,130 square miles. The islands were discovered by Tasman in 1643, became a British possession in 1874, and are a crown colony. The surface is generally mountainous. The leading product is sugar.

Gambier Islands.

Area, 6 square miles. Population, 1,533.

Population per square mile. 255.5.

A group of small islands, belonging to France, located at about latitude 23 degrees south, longitude 135 degrees west.

Gilbert Islands (See also Ellice Islands).

Area, 166 square miles. Population, 26,863.

Population per square mile, 161.80.

An archipelago of Micronesia, northeast of the Solomon Islands. Discovered by Byron in 1765, and consists manly of atolls; it belongs to Great Britain. The principal islands are Butaritari, Makin, Tarawa, Abaian. Marakei, Maiana, Abemama, Kuria, Ananuka, Nonouti, Tapiteuea, Beru, Nikunau, Onotoa. Tamana, Arorae and Ocean Islands.

Guam Islands.

See United States Possessions.

Hawaii.

See United States Possessions.

Low Archipelago.

See Tuamotu Islands.

Marquezas Islands.

Area, 480 square miles. Population, 3,424.

Population per square mile, 7.13.

A group of islands south southeast of Hawaii, of which Nukahiva and Hivaoa are the largest. Discovered by Mendana in 1595, and again by Cook in 1774. In 1842 they became a protectorate of France. The surface is mountainous.

Marshall Islands.

Area, 150 square miles. Population, 15,091.

An archipelago consisting of two chains or rows of lagoon islands. Coco-palm plantations are flourishing and the chief export is phosphate. Discovered by Saavedra in 1529, and explored by Marshall and Gilbert in 1788. Held by Japan under mandate. Capital, Jaluit.

Midway Islands.

See United States Possessions.

New Caledonia Island and Dependencies.

Area, 8,548 square miles. Population, 56,208.

Population per square mile, 6.57. Capital, Noumea.

A French colonial possession. The island of New Caledonia was discovered by Cook in 1774, and was taken possession of by the French in 1853. Dependencies are the Isle of Pines, the Wallis archipelago, the Loyalty Islands, the Huon Islands, Futerna and Alafi and the New Hebrides.

Pelew (Palaos) Island.

One of the Caroline Islands in the Pacific Ocean. Population 3.101.

Pleasant (or Nauru) Island.

It is also known as Navado Island. Formerly within the German sphere of influence. Acquired by Great Britain in 1919 by the Treaty of Peace.

Pitcairn Island.

Area, 2 square miles. Population, 156.

The island was discovered in 1767, and was settled in 1790 by mutineers from the British ship Bounty. The colony removed to Norfolk Island in 1856. Many of them have since returned to Pitcairn Island. A British possession. Tropical products are grown.

Samoan Islands (British).

Area about 130 square miles. Population, 41,128.

A group of islands belonging in part to the United States, formerly belonging to Germany and the United States; the islands of Savaii and Upolu are the largest. See Samoa under United States possessions. German possession now held by New Zealand under mandate. Capital, Apia.

Society Islands, or Tahiti Archipelago.

Area, 650 square miles. Population. 12,255.

Population per square mile, 18.8. Capital, Papeete.

Comprises two subgroups, the Leeward and the Windward. The chief islands are Tahiti. Moorea, Raiatea, Boratea, Meatia and Eimeo. They export cocoanuts, oranges, cotton, mother-of-pearl, etc. The islands were visited by the Spanish navigator Pedro Fernandez de Quiros in 1607, and in the 18th century by Bougainville. Cook, the mutineers of the Bounty and others. They were taken under French protection in 1842 and made a French colony in 1880.

Solomon Islands, British.

Area, 14,800 square miles. Population, 150,660.

Population per square mile. 10.1.

A group of islands east of New Guinea, consisting of Guadaidinal, Malaita, Isabel, San Cristoval, New Georgia, Manos, Russell, Florida, Rennell, and numerous small islands of the Lord Howe group or Ontong, Java. the Santa Cruz Islands, Tucopia and Mitle Island.) They are under British protection. The islands were discovered by Mendana in the 16th century. The surface is mountainous and volcanic. Their inhabitants are principally Melanesians, and are warlike cannibals. Tropical fruits are extensively grown.

Solomon Islands, Formerly German.

Area, 4,200 square miles. Population, 80,000.

Acquired by Great Britain, 1919.

The northern group of islands, discovered by Mendana in the 16th century; the principal islands are Bougainville and Buka. Statements concerning British Solomon Islands as to surface, inhabitants and industries apply to the German Solomon Islands. Occupied by Great Britain since November, 1914.

Tonga Islands (Friendly Islands).

Area, 390 square miles. Population, 23,737.

Population per square mile, 60.8. Capital, Nukualofa.

The kingdom consists of three groups of islands, called respectively Tonga. Haapai, and Vavau, lying east of the Fiji Islands. They were discovered by Tasman in 1643. A British protectorate. The natives are mostly Christian, and a high state of civilization exists. Produce consists mostly of copra, green fruit, mats, tapa (a textile from bark), and fungus.

Tuamotu Group, or Low Archipelago.

An extensive group of islands, consisting of two parallel ranges of islands from King George's Island on the north to Gloucester Island on the south, east of the Society Islands, and south of the Marquezas Islands. They are a French protectorate.

Tubuai Islands.

Area, 115 square miles. Population, 2,550.

Population per square mile, 22.1.

A group of Polynesian islands, south of the Society Islands, belonging to France since 1881, of which Rurutu and Rimitara are the largest; Raivavae (or Vavitu), and, far to the south, Rapa. Pearls and mother-of-pearl are important products.

Tutuila Island.

See United States Possessions.

Union Islands, or Tokelau Islands.

Area, 7 square miles. Population, 913.

Population per square mile, 130.

Five clusters of islets, the principal of which are Fakaofo, Bowditch, Nukunono or Duke of Clarence, Atafu or Duke of York, Nassau and Danger. They belong to the Gilbert and Ellice colony.

Wake Island.

See United States Possessions.

Yap.

One of the Caroline Islands, Pacific Ocean. Area 79 square miles. Population, 7,500. It was the seat of the German administration of the Western Carolines. This island was asked for by President Wilson at the Versailles Peace Conference for use as an international cable station, but Japan claimed it under a previous secret arrangement with England, no official note was made of the Wilson request, and the matter was complicated by Japan taking possession. The mandatory to Japan was assigned without consulting the United States, and at our suggestion the matter was reopened in 1921. Yap may become an international cable station. It occupies a strategic position to the Philippines.

PRINCIPAL ISLANDS IN THE INDIAN OCEAN.

Andaman Islands.

Area, 2,508 square miles. Population, 17,926.

A group of islands, belonging to Great Britain, situated in the eastern part of the Bay of Bengal. It comprises the great Andaman group and the Little Andaman group. It is a penal settlement used by the government of India for life and long-term convicts. Capital, Port Blair.

Christmas Island.

Area, 80 square miles. Population, 1,564.

Population per square mile, 19.5.

An island 200 miles southwest of Java and 700 miles east of the Cocos Islands. Is a British possession. The inhabitants are employed in the enormous phosphate deposits which the island contains.

Cocos, or Keeling Islands.

A group of about 20 small coral islands, lying about 700 miles southwest of Sumatra, and 1,200 miles southwest of Singapore. Population 772.

Comoro Islands.

Area, 790 square miles. Population, 97,900.

Population per square mile, 124.

An archipelago, consisting of Mayotte, Anjouan, Grande Comoro, Mohedi, and a number of smaller islands. They were taken under the French protection in 1886. The population is partly Arab, partly Malagasy. The chief product was formerly sugar, but the cultivation of vanilla has now superseded that of the sugar cane. Besides vanilla and sugar, Cacao, alois, and perfume plants (citronilla, ylang-ylang, patchouli, etc.) are cultivated.

Laccadive Islands.

A group of 14 islands (9 inhabited), about 200 miles off the west or Malabar coast, of India. Discovered by Vasco da Gama in 1499. The leading product is coir. The inhabitants are Moplas; the religion is Mohammedan.

Madagascar.

Area, 228,000 square miles. Population 3,545,264.

Population per square mile, 13.8. Capital, Antananarivo.

An island east of Africa, from which it is separated by Mozambique Channel. It was early visited by Arabs, and was discovered by the Portuguese in 1506. Madagascar became a French possession August 6, 1896, and the island and its dependencies were declared a French colony. The Malagasy Asiatics carry on small retail trade. The people are divided into a great many clans, who seldom intermarry. The Christian population is estimated at 450,000 Protestants and 50,000 Roman Catholics. The outlying tribes are still mostly heathen. Education is compulsory, and children are required to learn the French language. Cattle breeding and agriculture are the chief occupations of the people; the chief products are sugar, coffee, manioc, cotton, cacao, vanilla, tobacco, butter beans, cloves, mulberry trees, and rubber trees. Sericulture is encouraged. The forests abound with many valuable woods, while caoutchouc, gums, resins, plants for textile, tanning, dyeing and medicinal purposes abound. Mining is carried on, and of minerals, gold. iron, copper, lead, silver, zinc, antimony, manganese, nickel, sulphur, graphite, lignite, and also coal have been found. Seven hundred seventy-six miles of railroad are in operation.

Maldive Islands.

A group of 12 coral islets (atolls), richly clothed with cocoanut palms, and yielding millet, fruit, and edible nuts. Population about 50,000 Mohammedans. The people are civilized and are great navigators and traders. Capital is at Male. The islands are located 400 miles west of Ceylon, governed by an elected Sultan, who pays a yearly tribute to the Ceylon government.

Mauritius Island.

Area, 720 square miles. Population, 377,083.

Population per square mile, 523.7. Capital, Port Louis.

Belonging to the Mascarene group; was discovered by the Portuguese in 1507. From 1598 to 1710 it was held by the Dutch. In 1715 the French took possession. It was conquered by the British in 1810. The surface is largely hilly. The inhabitants are Hindus, mixed races, and Europeans of British and French origin. Chief export is sugar. 119½ miles of railroads, 621 miles of telegraphs, 119 miles of telephones. Dependencies are Rodrigues, area 40 square miles, population, 4,829; St. Brandon or Cargados Islands, mostly sand banks; the Chagos Islands, and the Trois Freres, or Eagle Islands. Diego Garcia, the largest of the Chagos group, is twelve and one-half miles long, six and one-quarter miles wide.

Nicobar Islands.

Area, 635 square miles. Population, 8,818.

Population per square mile, 12. Capital, Nancowry.

A group of nineteen islands, seven uninhabited; usually divided into three groups, Southern, Central and Northern, the chief islands in each being respectively, Great Nicobar, Camorta, with Nancowry, and Car Nicobar. The Nicobar inhabitants are a variety of the Malay race. This people are known to have eagerly pursued the cocoanut trade for at least 1,500 years, which is estimated at 15,000,000 nuts per annum.

Reunion Island.

Area, 970 square miles. Population, 174,000.

Population per square mile, 179. Capital, St. Denis.

An island, southwest of Mauritius; a colonial possession of France. Discovered by Mascarenhas in the beginning of the 16th century, and was taken possession of by the French about 1642 and in 1649. It was occupied by the British 1810-15. The inhabitants are descendants of French, negroes, coolies, etc. The surface is mountainous and volcanic, the highest summit being Pilton des Neiges, 10,069 feet. Chief products are sugar, rum, coffee, tapioca, vanilla, and spices. There are 88 miles of railways open, 221 miles of telegraph and 66 miles of telephone lines on the island. Saint Paul and Amsterdam Islands, and Kerguelen Island, a desolate island, belong to France.

Sakhalin Island.

Off the east coast of Asiatic Russia. Above the 50° Russian, below the 50° Japanese territory. Russian territory, 14,668 square miles. Population, 34,000. Japanese Sakhalin: Area 13,148 square miles. Population: 79,131. The part below the 50° became Japanese after the war between Japan and Russia and has been heavily colonized since by Japanese. Herring fishery is a leading industry, but large areas are fit for agriculture and grazing. There is considerable timber area. Coal and gold are found.

Seychelles Islands.

Area. 156 square miles. Population, 24,572.

Population per square mile, 160. Capital, Victoria.

A group of 90 islands and islets, belonging to Great Britain, situated east of Zanzibar, Africa. The principal island is Mahe; smaller islands of the group are Praslin, Silhouette, La Digue, Curieuse and Felicite. Among dependent islands are the Amierantes, Alphonse, Bijoutier, St. Francois, St. Pierre, the Cosmoledo Group, Astove. Assumption, the Aldabra Islands, Providence, Coetivy, and Flat Island.

NORTH AMERICA

Area, 8,037,714 square miles. Population, **145,441,701.**

Population per square mile, 17.

A grand division of the earth which comprises the northern half of the western hemisphere. It extends from Bering Sea to Panama. Its political divisions are Dominion of Canada, Newfoundland, Labrador, Mexico, the United States, the five republics of Central America, British Honduras, Panama and the Canal Zone. In addition, Greenland and the North polar islands, north of the mainland, together with the West Indies, are reckoned in North America. It is almost certain that North America was reached by Norsemen about 1,000 A. D., and it may have been visited by isolated bands at various times before the discovery by Christopher Columbus in 1492. Cabot discovered northern coast of North America in 1497. Cortereal explored coast of Labrador in 1500. Ponce de Leon discovered Florida and southeastern coast in 1512. Verrazano explored eastern coast in 1524. Cortez conquered Mexico in 1519-21. Cabrillo explored California coast in 1542; Drake in 1578-79. Canada was settled by French in 1534. English colonists settled on Atlantic coast in the 17th century, and in 1763 the colony thus settled passed into ownership of British. American independence declared in 1776. Republic of the United States was established in 1775-1783. Mexico declared its independence of Spain in 1822. Confederation of Central American States in 1824, but dissolved in 1839. Cuba declared independent of Spain in 1898. Panama declared independent of Colombia in 1903.

The main physical features of the continent are the Cordilleran mountain system on the west, embracing Rocky, Sierra, and other mountain ranges, of which Mount McKinley is the highest peak, being 20,464 feet; Appalachian system on the east, of which Mitchell's Peak is the highest, being 6,711 feet; the great plain extending from the arctic regions to the Gulf of Mexico, the Saint Lawrence and Great Lakes system, and the Mississippi system. The eastern coast is much more indented than the western. Principal rivers are the Mississippi, Missouri and tributaries; Saint Lawrence with Great Lakes; Columbia, Yukon, and Mackenzie Rivers. Has a coast line of 24,500 miles.

The climate is somewhat colder than that of the divisions in the Eastern Hemisphere in the same latitude, and the rainfall is greater. The eastern coast is colder than the western, and subject to greater extremes of heat and cold. Labrador and the arctic regions are extremely cold. Temperate zone section has cold winters and hot summers. Extreme south, tropical. The lowlands of Central America, Mexico and the West Indies are hot and unhealthful, while the interior plateaus are equable and temperate. Rainfall greatest in northwest and southeast.

The vegetation is scanty in the north; central and southern sections fertile; with plant life luxuriant and varied. Native food plants are Indian corn, or maize, the potato and manioc; tobacco plant indigenous to the country. Corn, wheat, oats, barley, potatoes and hay are extensively cultivated in the central and northern sections; sugar cane, cotton, tobacco and rice are most important in the temperate regions; sugar cane, sweet potatoes, indigo, tobacco, coffee and cacao in the tropics.

Timber supply is one of the most valuable commercial products of North America. Conifers prevail in the North; the western mountain forests are remarkable for giant conifers such as sequoia, Douglas fir, and others. Variety of deciduous forests is great, which include over 40 varieties of oak, maple, beech, hickory, walnut and birch. Mahogany, logwood, lignum-vitae and other rare and valuable trees are found in the forests of the tropical regions.

North America is unsurpassed in richness and variety of mineral products. West of the Rocky mountains is one of the richest gold countries of the world. Silver is widely distributed and extensively mined. Montana and Lake Superior shores have the richest deposits of copper in the world. Coal deposits in the United States and Alaska are largest and most valuable of any in the world. Iron ores are of vast importance and oil wells are most productive and valuable in the world. Antimony, cobalt, lead, nickel, platinum, quick-silver, sulphur, salt and zinc are mined. Building stone of excellent varieties, beautiful marbles and fine roofing slate are abundant.

UNITED STATES

Land area, 2,973,774 square miles. Water area, 52,899 square miles. Total, 3,026,789 square miles.
Population census of 1920 105,710,620.

Population per square mile, 35.5. Capital, Washington.
Total population of United States and possessions 116,433,612.

A federal republic, which occupies the central part of North America. Excluding Alaska, it is bounded on the north by the Dominion of Canada, on the east by the Atlantic Ocean, on the south by Florida Strait, Gulf of Mexico and Mexico, and on the west by the Pacific Ocean.

The region is said to have been visited by Norsemen about 1000. It was seen by the Cabots in 1497-98, and explored by Ponce de Leon in 1513-14, Verrazano in 1524, DeSoto in 1539-42, and others. The first permanent settlement was made at St. Augustine in 1565. Thirteen colonies by their union in 1776 formed the thirteen original states.

The following are among the leading events of United States history: Revolution hastened by the Stamp Act of 1765, taxes in 1767, and the Boston Port Bill of 1774; commencement of the revolution, 1775; Declaration of Independence, 1776; Articles of Confederation adopted, 1777-1781; surrender of Cornwallis at Yorktown, 1781; recognition of independence, 1783; Ordinance of 1787 relating to the Northwest Territory; Constitution framed, 1787; new form of government inaugurated, 1789, with the capital at New York; capital removed to Philadelphia, 1790; Indian wars, 1790-94; French war, 1798-1800; capital transferred to Washington, 1800; Tripolitan war, 1801-5; Louisiana Purchase, 1803; embargo, 1807; war with Great Britain, 1812-15; cession of Florida by Spain, 1819; Missouri Compromise, 1820; nullification movement, 1832-33; financial crisis, 1837; annexation of Texas, 1845; Mexican war, 1846-48; acquisition of territory from Mexico, 1848, and by the Gadsden Purchase, 1853; Omnibus Bill, 1850; Kansas-Nebraska Bill, 1854; financial crisis, 1857; secession of eleven states, 1860-61; Civil war, 1861-5; Lincoln's emancipation proclamations, 1862 and 1863; constitutional prohibition of slavery, 1865; reconstruction in the South, 1865-70; purchase of Alaska from Russia, 1867; financial crisis, 1873; Hawaiian Islands annexed, 1898; Spanish American war, 1898; liberation of Cuba and ceding by Spain of Porto Rico, Guam and the Philippine Islands to the United States; participation in the World War of 1914-18, entering in 1917 and continuing to the end, aiding to win victory for the Allies over Germany and her confederates; adoption of constitutional amendments establishing national prohibition, effective Jan. 16, 1920, and giving women full political rights effective Aug. 26, 1920. These amendments are the 18th and 19th. War operations resulted in making the United States the creditor nation of the world. A great merchant marine has been built, and a navy adequate to protect it.

The Federal executive power is vested in a president, elected for 4 years, by an electoral college which is elected by the votes of the people of the different States. He is assisted by a cabinet of 10 members of his own appointment. The legislative authority is vested in Congress, which consists of a Senate, 2 members from each State, chosen by popular vote for six years; a House of Representatives, at present of 435 members, elected every second year by vote of the people, on the basis of one representative to every 210,415 inhabitants. The State governments are administered each by a governor and a legislature of two houses. There are district Federal and State judicial systems, the highest court in the land being the United States Supreme Court, which consists of a Chief Justice and eight associate justices.

The great physiographical divisions are the Atlantic slope, Appalachian system, gulf coastal plain, central plain (which includes the Mississippi Valley and the Great Lakes basin), Rocky Mountain system, Columbian plateau, great interior basin, Sierra Nevada and Cascade systems, and Pacific slope. The principal rivers are the Mississippi (with the Missouri, Ohio, and tributaries), Saint Lawdence, Yukon, Rio Grande, Colorado, and Columbia; the principal lakes are the group known as the "Great Lakes" (Lakes Superior, Michigan, Huron, Erie and Ontario), Great Salt Lake and Lake Champlain. The most elevated point of land east of the Mississippi River is Mt. Mitchell (Black Dome), in North Carolina; west of the Mississippi, Mt. Whitney, in California. There are no fully active volcanoes within the United States at the present day, but volcanic outbursts have been reported within comparatively recent times, and many of the western peaks are volcanic in origin; Mt. Lassen, California, is an example of volcanic eruption, emitting lava and ashes for weeks at a time.

The climate is varied, on account of the large territory, is temperate throughout the country, but subject to sudden changes. On the Atlantic Seaboard and the Great Central Plain, extremes of heat and cold are more marked. Along the shores of the Gulf of Mexico and the extreme south, the summers are intensely hot, and winters mild. The Pacific Slope has the most equable climate. Mean annual temperature is 53 degrees. In the Mississippi Valley and East, the rainfall is evenly distributed and abundant; along the Atlantic and Mexican Gulf it is heaviest; mean annual rainfall about 44 inches. The western plateaus are noted for lack of rain, and dry west winds. Dry and wet seasons obtain on the Pacific Slope, the rainfall being heaviest in the northwest.

The total land surface of the United States is 1,903,289,600 acres, of which 665,891,029 acres are unappropriated and unreserved public lands. The public lands are divided into two classes. The one class has a dollar and a quarter an acre designated as the minimum price, and the other two dollars and a half an acre, the latter being the alternate sections, reserved in land grants to railroads, etc. Titles to these lands may be purchased for cash, or may be acquired by location under the homestead laws. The homestead laws give the right to 160 acres of the dollar and a quarter land to any citizen who will actually settle upon and cultivate it. The only charges in the case of homestead entries are fees and commissions. Number of farms in 1920, 6,447,998. The leading agricultural products are corn, wheat, and oats; other important crops are rye, barley, buckwheat, flax seed, rice, potatoes, sugar, cotton, tobacco and hay. Live stock and dairy products are industries of importance in nearly every State; western sections are especially adapted to cattle, sheep and swine. Vast quantities of butter, cheese and wool are produced. Arid lands are rapidly being reclaimed through irrigation; soil of the Mississippi Valley and the eastern part of the country remarkably rich. In the Pacific States fruits common to the temperate and semi-tropical zones are extensively cultivated.

The United States forests cover 550,000,000 acres, or about one-fourth of the whole country. There were five great forest regions—the northern, the southern, the central, the Rocky Mountain and the Pacific. The present rate of cutting is three times the annual growth of the forests of the United States. The great pineries of the Lake States are nearing exhaustion and heavy inroads have been made upon the supplies of valuable timber throughout all parts of the country. Principal soft woods are yellow pine, Douglas fir, and white pine; hard woods include oak, maple, red gum, walnut, hickory, tulip poplar, chestnut, birch and beech.

Mineral products are iron, silver, gold, copper, lead, zinc, quicksilver, aluminum, tin, platinum, antimony, nickel. Non-metallic products are bituminous coal, anthracite coal, stone, petroleum, natural gas, cement, salt, phosphate rock, mineral paints, borax, arsenious oxide. Precious stones, sapphires, turquoise, tourmaline, garnets, coryl, agate, amethyst, ruby, topaz and quartz crystals in various forms.

The commerce of the United States is of vast importance. Foreign trade for the fiscal year 1920, with a total of $13,349,661,401, was larger than in any previous year, exceeding by $3,000,000,000 the former high record in 1919, and was more than three times the value of the combined imports and exports in 1914, the last year before the war. The imports were valued at $5,492,061, and exports at $8,756,669,599, an excess of exports over imports of $3,264,608,225. Chief exports, breadstuffs, cotton, meat and dairy products, iron, steel, mineral oils, copper and manufactures of iron, steel, copper, gold, silver, aluminum and wood; chief imports, sugar, hides and skins, coffee, tea, india-rubber, etc.

Shipbuilding has become one of the greatest industries. American ships now carrying the bulk of its exports. Tonnage in merchant shipping increased from 5,368,194 in 1914 to 13,091,773 in 1919, and 15,800,000 in 1920.

Automobile and auto truck development phenomenal, creating a nation-wide demand for good roads, for which many millions of dollars are spent annually. Government operation of railroads was found to be unendurably expensive, and the roads were turned back to private ownership on Dec. 24, 1919. A deficit of $900,478,756.56 during government management had to be made up from other resources.

ALABAMA—"Cotton State."

Motto: "Here we rest." Flower: Goldenrod.
Area: 51,998 square miles. Population: 2,348,174. Population per square mile: 45.8.

Alabama was first known to Europeans in 1547. It was first settled by the French near Mobile Bay in 1702, and the City of Mobile was founded in 1711. In 1817 Alabama was separated from Mississippi Territory and it became a State in 1819; seceded in 1861, and became a State again in 1868. Its present Constitution was adopted in 1875.

Alabama is 330 miles long and 200 miles in breadth, has about 60 miles of sea coast including Mobile Bay, which is one of the finest of Gulf harbors. The southern end of the Allegheny mountains extends into the northeastern corner of the State, which naturally presents some rugged elevations, from which the southward slope is quite gradual—with many rolling prairies in the central, and a flat coastal plain in the southern part but little above the sea. The highest point in the State is Cheawha mountain, 2,407 feet above sea level.

The principal river in the State is the Mobile, which for 45 miles, from the junction of the Alabama and the Tombigbee, is navigable for large steamboats. The Tennessee is navigable; also the Tombigbee, for light draft boats, as far as Columbus, Mississippi; the Black Warrior to Tuscaloosa; the Alabama to Montgomery; the Chattahoochee to Columbus, Georgia. The Conecuh, the Perdido, the Choctawhatchee, the Coosa, Catawba and Tallapoosa are smaller rivers.

Forests of good timber are plentiful in the northern and central parts. In the northern part the climate is very mild, and in the southern it is semi-tropical. It reaches within seven degrees of the Torrid Zone; hence the state has great possibilities in agriculture. Cotton and corn are the chief products Sweet potatoes, rice, sugar cane and fruits grow in abundance. The last census reports 256,023 farms, and the total value of farm products was $385,791,000. In the northeast there is a coal area of 5,261 square miles, and near this coal area are immense deposits of iron ore. It is the eighth state in production of coal, and fifth in iron. The important manufactures are iron, cotton and flour mill products. The total mileage of steam railroads is 5,608; electric roads, 366. There are free schools for all between the ages of seven and twenty-one; white and colored children must be educated separately. The University of Alabama is at University, near Tuscaloosa, the Alabama Polytechnic Institute at Auburn, and the Tuskegee Normal and Industrial Institution (colored), at Tuskegee, the greatest negro school in the world.

Mobile, one of the richest and prettiest of Southern cities, situated on Mobile Bay, is second in importance to New Orleans as a cotton port. Montgomery, the capital, is situated at the head of steamboat navigation on the Alabama River. It ships a large amount of cotton, and has marble works, iron foundries, etc. Birmingham is an important iron manufacturing city and railroad center. Selma is finely located and has a large river and railway trade. Huntsville is in a fertile region and has many trade advantages. Eufaula is one of the leading cities on the Chattahoochee River. Tuscaloosa is an important mercantile center. Anniston, Bessemer, Decatur, Dothan, Florence, Gadsden, Girard, Opelika, Talladega, Troy and Union Springs are other important towns.

ALASKA

Area: 590,884 square miles. Population: 54,899. Population per square mile: .1

In 1868 the United States paid Russia $7,200,000 in gold for Alaska, and in 1868 Congress provided a territorial government. In the waters here within the jurisdiction of the United States are the most valuable seal and other fisheries in the world. Alaska has a greatest length, north to south, of over 1,100 miles, and a width of 800 miles. It has a coast line of 8,000 miles. Much of the interior is still unexplored. There are three important mountain chains: the Coast Range, the Rocky Mountains, and the Alaskan Range. Mt. McKinley, near the center of the peninsula, is 20,464 feet high. Alaska contains 75 volcanoes, some of which are still active. It is one of the world's greatest glacier regions. Many of these glaciers are famous. Opposite a glacier near Fort Wrangell, four miles in length, are large boiling springs. This is a hot and medicinal spring region. There is one vast smoking cauldron six miles in diameter. The Yukon is Alaska's greatest river. It it navigable in Alaska for 1,200 miles, and is six miles wide in places. The Susitna, Porcupine, Tanana, Koyukuk, Kuskowim and Copper ade other important rivers. Alaska is a region of natural wonders and has long attracted tourists, especially scientific observers. Besides the white population there are a great number of native Indians; also Eskimos, Aleuts, Chinese, Japanese and Negroes. The climate is much less severe than that directly opposite on the east coast of America. Along the valley of the Yukon there are large fertile plains, covered with vegetation. The mildness of the climate so far north is due to the warm Japanese current. Within this current are the Aleutian Islands, where it is seldom lower than twelve below zero in winter. In Central and Northern Alaska it is frequently 40 to 60 degrees below. The summers come quickly and are often quite warm. Alaska is governed as a Territory, with a governor appointed by the President for four years, and has a delegate at Washington. There are very large timber resources, which are as yet undeveloped. Total shipments from the United States in 1920, $33,998,462; from Alaska to the United States, $66,498,871. Gold shipped in 1920, $8,058.818; copper ore, $13,571,683. Silver and copper are produced to an increasing extent. Near Cape Prince of Wales the ore deposits are of a high grade. There are vast deposits of lead, coal, oil, tin, and marble. The total mineral output is about $22,000,000 yearly. The seal fisheries are very valuable and are being protected. Salmon fisheries are a source of great profit; the annual catch is valued at $16,000,000. Halibut, cod, herring and whales are caught. There are 301 miles of railway.

ARIZONA

Motto: Ditat Deus (God enriches). Flower: Sequoia cactus.

Area: 113,956 square miles. Population, 1920: 334,162. Population per square mile: 3.

Signifies "little creeks," and was explored by the Spanish in the 16th century; was acquired from Mexico in 1848, and an additional part by the Gadsden Purchase in 1853, and was organized as a Territory in 1863. In 1906 and 1907 it refused organization into joint statehood with New Mexico, and in 1910 was admitted as a State.

The entire State is one of great elevations, ranging from 100 feet to 7,000 and 8,000 feet on its broad plateaus, and there are many mountain summits and isolated peaks rising 8,000 to nearly 13.000 feet; some of the latter having been active volcanos. Here are found castle domes and buttes, solitary peaks, vast mesas of bare rock or beds of volcanic ash; there are miles upon miles of red and yellow sands, solemn gorges, deep canons, petrified forests, in which are frequently found gems of topaz, amethyst and agate. Arizona is a land of wonders, not the least of which are the Grand Canon of the Colorado and the Canon Diablo. In the Canon of the Cataract Creek the water pours over a precipice 1,800 feet high. It is exceeded in height only by the Grand Falls (2.000 feet) in Labrador, and the Southern Land Falls (1,904 feet) in New Zealand. Arizona is 390 miles in length and 335 miles in its greatest width. The Colorado, which separates Arizona from Nevada, is its only navigable river, and is navigable for about 600 miles; fully 200 little creeks or streams flow into it. The principal ones are the Gila, the Cataract, the Little Colorado and Williams Fork. While none of these is navigable, they are of importance for irrigation and mining. The races that formed the earliest inhabitants are extinct, but the Casa Grandes, Pueblos, cave and cliff houses, still visible, bear evidence of their antiquity.

The heat of the low altitudes in summer is intense, but on the high plateaus the air is dry and bracing, and on the mountain peaks snow falls in winter.

There is a University at Tucson, and there is a good daily attendance at the public schools. School attendance is compulsory for all children between eight and sixteen years.

Along the watercourses and where irrigation is used the soil is well suited for agriculture. The wide pasture-lands are favorable for cattle and sheep. Several large reservoirs for the storage of water have been constructed by the United States Government, notably the Roosevelt dam, which supplies the rich Salt River Valley District, and the Yuma project, which makes use of the water of the lower Colorado River and adds hundreds of thousands of acres to the agricultural area.

The principal cities are Tucson, which manufactures flour. and exports gold dust, hides and wool; Prescott, situated at an elevation of 5,320 feet and in the center of an important mining district, and its trade is lumber, wool and bullion; Tombstone, a mining town near extensive silver veins; Phoenix, the capital; Yuma. an important railroad and river town, and Flagstaff, the center of a great lumber camp. Other important towns are Bisbee, with large copper mines; Florence, where the United States Land Office is located; Globe, near rich silver and copper lodes; Jerome, in a mining district, and Nogales, seat of cattle raising and mining industries. There are 2,390 miles of steam railroads and 54 miles of electric lines in the State. Arizona has 10.816 farms. The value of its farm products last reported was $56,248,000.

ARKANSAS—"Bear State."

Motto: Regnant populi (the people rule). Flower: Apple Blossom.

Area: 53,335 square miles. Population, 1920: 1,752,204. Population per square mile, 33.4

Officially pronounced Arkansaw, was originally a part of Louisiana. It came into the possession of the United States in 1803 and in 1812 it became a part of Missouri; in 1819 it was made a separate Territory, and in 1836 a State. In 1861 Arkansas joined the Confederate States, and it was re-established in the Union in 1865, being again represented in Congress in 1868. Its present Constitution was adopted in 1874.

The eastern part is level and low and is protected from inundations of the Mississippi by an excellent system of levees and dykes. With some prairie, this east section contains forests of very valuable timber. The soil is very productive. The middle and western sections are broken and in some parts mountainous. The Ozark Mountains extend southwest in broken ranges of hills. Black Hills, Ouachita Hills, Cane Hills and Pea Ridge are outlying members of this system. The highest of these elevations, Blue Mountain, is 2,800 feet above sea level. Arkansas has over 1,500 miles of navigable streams! the Mississippi being the eastern boundary. The St. Francis and White Rivers each flow about 120 miles through the State. The Arkansas is navigable beyond the State limits. The Ouachita and Red Rivers are streams in the western part. There are many noted medicinal springs, chief among them being Hot Springs and Eureka Springs.

In the south the climate resembles Louisiana, and in the north, Missouri.

The present school system was adopted in 1909, and provides for a school in each district at least six months each year, and attendance is compulsory for all children from eight to sixteen years. The University of Arkansas is at Fayetteville.

Chief among the principal cities are Little Rock, the state capital. situated on high bluff on Arkansas River; Fort Smith, near the head of steam navigation on the same river; Hot Springs, famous for over 150 mineral springs of varying temperature; Argenta, Eldorado, Eureka Springs, Fayetteville, Helena, Jonesboro, Marianna, Paragould, Pine Bluff, Texarkana, and many others, where manufacturing and mercantile business is carried on extensively.

Mineral resources are considerable and give promise of future development. The State is well watered and stock raising and agriculture are chief among its industries, though its manufacturing interests are increasing. Number of farms, 232,602. The total value of farm products last reported was $395,226,000, and the total value of farms in the State was $260,000,000. There are 5,418 miles of steam railway and 131 miles of electric

CALIFORNIA—"Golden State."

Motto: Eureka (I have found it). Flower: Golden poppy.

Area: 158,297 square miles. Population: 3,426,861. Population per square mile: 22.

Little was known of this region by Americans previous to 1840, although in 1579 Sir Francis Drake, exploring the coast, named it New Albion, and declared his conviction that there was a likelihood of gold in every part of it. Between 1841 and 1843 Captain Fremont and Commander Wilkes made extensive explorations. In 1846 San Francisco was taken possession of by Commander Montgomery in the name of the United States, but it was not until 1848 that the Territory was formally ceded to The United States. In the same year gold was discovered near the town of Coloma. An immediate rush set in from the older States. California was admitted to the Union in 1850. A new constitution was adopted in 1879. Chinese exclusion is provided by the constitution, or in 1920 the legislature passed a law to stop Japanese from coming into the State and buying land. It created a great uproar in Japan, and much bitterness has been engendered.

California is the second State in the Union in size, being 770 miles greatest length and 375 miles greatest width. It has 1,000 miles of coast line. Owing to irregularity of surface, only about one-third of the State is arable. The coast region is very fertile and the southern part is irrigated by numerous streams. The northern portion, however, is mainly dependent on rainfall. Two mountain chains run through the State, uniting at the nodth and south ends. The Sierra Nevada (snowy mountains) form in some part the eastern boundary. In many instances, the summits are above the snow line. Mt. Whitney is 14,501 feet, Mt. Shasta 14,442, Tyndall 14,386, Brewer 13,886, Dana 13,277 and Lassen (inactive volcanic eruption during 1920) 10,577 above sea level. The Coast Range is seldom over 5,000 feet. Some of these mountains are heavily wooded and rich in minerals. The central basin of the Sacramento-San Joaquin Valley is very fertile, and is 50 miles wide by 400 miles long. There is in the north a plateau about 100 miles broad, 5,000 feet elevation, without drainage outlet, and south is the Colorado Desert, 150 by 70 miles in area. The Napa, Sonoma, Salinas, Los Angeles, San Gabriel and Santa Ana are among the fertile valleys. Chief among the rivers are the Colorado, which forms the boundary of the State with Arizona, the Sacramento, the San Joaquin, the Kern, the Klamath and the Trinity. There are many mountain lakes. Lake Tahoe, 6,200 feet above the sea, is 20 miles long and 1,500 feet deep. The largest port of entry for ocean steamers is San Francisco. Other principal harbors are San Diego, Port Los Angeles, Humboldt, Santa Barbara, Monterey, Bodega, San Luis Obispo and Tomales. California is noted for its scenery—its springs, giant trees, the magnificent Yosemite Valley, towering cliffs, water-falls, lakes, its rora. petrified forests, geysers, caves; which present to the traveler scenery scarcely found elsewhere.

Owing to its length north and south, its elevations, and to the influence of sea and land breezes, California possesses nearly every climate except equatorial. In the north the winters are more severe, but along the coast they are mild and the summers are agreeable. There are two seasons, the wet and the dry, corresponding to the winter and summer east of the Rockies. Rainfall is variable; irrigation is necessary.

School attendance is compulsory. The University is at Berkeley. The Lick Observatory, known the world over, is connected with the Leland Stanford Jr. University near Palo Alto. There are several other prosperous colleges in the State. The State has a very comprehensive library system. and contains a vast system of National and State parks and forest reserves and Indian reservations.

San Francisco was originally called Yerba Buena, meaning good herb. In 1843 it was a village of but 500 inhabitants. Oakland, on the opposite side of the bay, is a beautiful city; near by are Alameda and Berkeley. Sacramento is the capital and is a port of entry on the Sacramento River, 125 miles from the sea. Los Angeles passed San Francisco in the 1920 census and is the largest city in point of population. Stockton and San Jose are important cities—the former noted as a winter resort. Bakersfield, Eureka, Fresno, Long Beach, Pasadena, Pomona, Redlands, Riverside, San Bernardino. San Jose, Stockton, San Diego, Monterey, Santa Barbara and Santa Cruz are other cities of note. Chief among the industries of California are her gold products and her mines of silver, quicksilver, copper, lead, soda, sulphur and coal; oil is abundant. Lumber is a valuable industry. Wheat, corn and flour are exported. and it leads in the cultivation of fruits, which are grown in great profusion. The exportation of all kinds of fruits belonging to the temperate and semi-tropical zones has reached marvelous proportions. No other State raises so great a variety and abundance of grapes. The grape district is 600 miles long and 85 miles wide. One of the largest vineyards in the world is on the farm of the late Leland Stanford, and covers 400 acres. Raisins and olives are exported. California olive oil is rapidly taking the place of the imported oils, and is of a superior quality. California ranks next to Australia in sheep raising; the cattle industry, too, is extensive. From the last census reports there were 117,690 farms in the State. The total value of farm and orchard products was $475,251,000. There are 8,499 miles of steam railroads and 3,424 miles of electric lines in the State.

COLORADO—"Centennial State."

Motto: Nil nisi numine (Nothing without Providence). Flower: Columbine.

Area: 103,948 square miles. Population: 939,629. Population per square mile: 9.

A brief visit was made to this region by the Spaniards in the 16th century. Fremont made some explorations there in 1843, but it was not till 1858 that the first American settlement was made near Denver, through the discovery of gold on the Platte River. Such was the rush of adventurers that several cities were founded the following year. In 1861 Colorado became a separate Territory, and was admitted as a State in 1876. It is 390 miles from east to west, and 270 miles from north to south. In shape it is almost a parallelogram and is divided in two sections by the Rocky Mountains, which within the State break up into parallel ranges with many peaks, varying from 11,000 to nearly 15,000 feet in height, chief among which are Longs Peak, Pikes Peak, Mounts Torrey, Gray, Lincoln, Harvard and Yale. Elbert Peak appears to be the highest surveyed elevation, 14,402 feet. These lofty elevations surround irregular plateaus or valleys called "parks," principal of which are Las Animas, North, Middle, South, San Luis, Estes and Manitou. Within these parks are valuable agricultural lands. The scenery here, with canons, caves and mountain walls, gorges and strange rock formation, is too grand to attempt description in these limited pages The principal rivers are the Colorado, the Arkansas, Green River and the South Platte, all of which have more or less important tributaries. There are many mineral springs, lakes and mountain torrents. The high peaks of the mountains are capped with snow summer and winter, but in the parks it seldom remains more than a day, and here the mildness of the atmosphere invites the invalid. Foggy weather is unknown, and the air is so dry and healthful that cattle feed upon the self cured and unharvested grasses throughout the entire winter. Most of the rain falls during May, June and July. Snow sometimes falls with great suddenness along the lower elevations of the mountains, and frequently disappears as quickly. For tonic effect there is no medicine known to the medical fraternity that will act so quickly as the air of the Colorado Mountains. The school age is from eight to sixteen years. The State has several colleges and higher educational institutions. Denver is the capital and metropolis and is called the mile high city, being 5,197 feet above sea level. It is magnificently situated and is the tourist's natural starting point to all places of interest in the State. It has large manufacturing, mining and commercial interests. A United States sub-mint is located here. Greeley, Boulder, Fort Collins, Leadville, Pueblo, Gunnison, Colorado Springs, Cripple Creek are other important cities. Colorado Springs and Manitou, at the base of Pikes Peak, are known for their attractions. Rocky Mountain Park. a national park, is located in Grand, Boulder and Larimer counties, and contains forests, lakes and peaks. There is scarcely a county in Colorado that does not contain cities of especial interest. Agriculture is confined to the parks and valleys, except where irrigation has fertilized the high levels. Cattle and sheep raising are valuable industries, but by far the greater interests are the mines, gold and silver predominating. There are in the State 59,991 farms. There are 5,611 miles of steam and 487 miles of electric roads in the State.

CONNECTICUT—"Nutmeg State."

Motto: Qui Transtulit sustinet (Who transplanted sustains). Flower: Mountain laurel.

Area: 4,965 square miles. Population: 1,380,631. Population per square mile: 286.4.

Connecticut was first settled by the Dutch in 1630. Three years later there were three settlements on the Connecticut River, at Windsor, Hartford and Wethersfield. In 1662, a new charter was secured under which all the settlements were united. The early settlers were Puritans. One of the original thirteen states, entering the Union January 9, 1788. Situated on the southern slope of the New England hill region. There are few elevations exceeding 2,000 feet The principal river is the Connecticut, navigable for steamboats as far as Hartford. There is a fine sea coast with excellent harbors and there are many small streams that furnish water power for various manufacturing plants. The New England climate prevails—cold winters with a great deal of snow, and hot summers. The Blue Hills and Housatonic Hills are noted elevations. There is a large and perpetual school fund and the schools of all grades are second to none in the country. Its universities and schools of higher education are too well known to need comment, Yale University being the most noted. Connecticut has a great many rich manufacturing cities, chief of which are New Haven, Hartford, the capital, Bridgeport and Waterbury. Latest reports give value of manufactured products for a year at $545,472,000. Other important places are Danbury, Middletown, Meriden, New Britain, New London, Norwich, Stamford, Torrington and Willimantic. Manufacturing is the principal industry. It is not an agricultural State, though dairy and truck farming, as well as the production of cereal and orchard products. add much to the wealth of the people. Building stone is abundant. There are 22,655 farms. The total value of farm products last reported was $68,012,000. The total mileage of railroads, steam, 998, and of electric, 1,501.

DELAWARE—"Blue Hen State."

Motto: Liberty and Independence. Flower: Peach blossoms.

Area: 2,370 square miles Population: 223,003. Population per square mile: 113.5.

Delaware was named for Lord De la Warre, who first entered Delaware Bay in 1610. The bay was first discovered, however, by Hudson, in 1609. The Swedes and Finns, who first settled the Territory, were dispossessed by the Dutch who annexed it to New Netherlands. In 1674 it was annexed to the British Colonies, and was purchased by William Penn in 1682 from the Duke of York. Delaware entered into the Revolution in 1775, and in 1776 it declared itself free, entered the Union on December 7, 1787, and formed a constitution which, amended in 1792 and 1801, is still in force. Delaware was classed as a southern State during the Civil War and maintained slavery, though it remained loyal to the Union. The State is 110 miles long and from 9 to 35 miles in width. The eastern part is somewhat sandy and even marshy in places, but throughout the western part it is hilly, well watered and very productive. It is preeminently a fruit growing State, though mining and manufacturing are valuable industries. The Delaware and Brandywine are the principal rivers, the latter of historic fame. There are other streams which form numerous sites for mills and factories. The climate is very even—somewhat colder and more healthful in the north. The highest point above sea level is at Centerville. Newcastle County, 440 feet. There is a State Board of Education, a Superintendent of Public Schools, also a Teachers' Institute. Delaware College at Newark has 90,000 acres of public land for an agricultural department, and was founded in 1834. Wilmington is almost entirely a manufacturing city. It is noted for its locomotive cars and iron vessels. Dover is the capital. New Castle is also an important manufacturing place. There are 340 miles of steam and 153 miles of electric roads in the State. There were, last reported, 10,128 farms. The value of farm products last reported was $26,339,000.

DISTRICT OF COLUMBIA

Flower: Nasturtium. Area: 70 square miles. Population: 437,571.

Population per square mile: 7,292.9.

It was not until the year 1790 that Congress, then in session at Philadelphia. passed a bill adopting the present site for the Nation's Capital; the change to be made from Philadelphia in 1800. The District of Columbia is also the capital of Washington in area and population and originally occupied ten square miles. The site was chosen by Washington, and to him Congress gave the sole power of directing the federal city to be laid off in what manner he pleased The District is governed by three Commissioners appointed by the President for four years. This Commission appoints subordinates, except a few city officials who are, also, selected by the President. The finances of the District are managed by the Treasury Department. Congress pays half of the taxes and the salaries of the officials and the residents pay the remainder. Legislative affairs are conducted by two committees of Congress. Residents have no vote, and, yet it is the best governed municipality in the United States. The supreme court, court of appeals, and the ordinary police courts constitute the judiciary. All the judges are presidential appointees. There is an efficient public school system, and there are, also, many institutions of higher learning located there. There is an excellent system of streets and parks. There are 53.57 miles of steam railroads and 422 miles of electric railroads in the District. The highest elevation is at Tenley. 420 feet.

FLORIDA—"Peninsula State."

Motto: In God we trust. Flower: Orange blossoms.
Area: 58,666 square miles. Population: 968,470. Population per square mile: 17.7.

Civilization in Florida dates farther back than in any other State of the Union. In 1512 it was conquered by the Spaniard, Ponce de Leon, and in 1539 it was visited by De Soto. In 1564 a permanent settlement was made at St. Augustine; and at Pensacola in 1596. The Spanish Colony was plundered by the British in 1535, and the territory was under British rule from 1763 till 1783, when it was re-ceded to Spain. In 1819 Spain ceded it to the United States, the cession being ratified the following year. Florida became a Territory in 1822 and a State in 1845. It seceded in 1861 and was restored in 1868. It is the southernmost State in the Union, extending as a peninsula through five degrees of latitude, with a coast line 472 miles long on the Atlantic Coast and 674 miles on the Gulf. Its surface, generally level but sometimes slightly unlulating, is nowhere over 301 feet above the sea. Its greatest length is 460 miles, and breadth, 400 miles. The highest point is at Mount Pleasant. Gadsden county, 301 feet above sea level. In the south the "Everglades," an extended swamp, being above sea level, have been drained and in part turned into rich agricultural land. Dense forests still cover the greater part of the State. There are numerous rivers, the most important of which are the St. Johns, Indian River, Caloosahatchee, Withlacoochee, Suwanee, Apalachicola, Ocklawaha. and St. Mary's. There are some lakes large enough for small steamers. Lake Okechobee is 40 miles long and 30 wide. Jacksonville, Fernandina and St. Augustine are important harbors on the Atlantic, and Tampa and Pensacola on the Gulf Coast. Palm Beach is a great winter resort. The climate is equable. In the northern part there are sometimes light frosts but none in the southern. It is an ideal winter resort. Game and fish abound. Sponges grow along the reefs and are an important item of trade. Horticulture and agriculture are the principal industries, the State supplying the Atlantic States and Middle West with early fruits and vegetables. One representative is sent to Congress at Washington by the Seminole Indians. There is a permanent school fund invested in state bonds, and there are private schools and academies. Among the schools for higher education are the University of Florida, at Gainesville, and the Florida State College for Women at Tallahassee. Jacksonville is the largest city in the State and one of the most progressive. Its commerce is considerable, but it is best known as a winter resort. It exports lumber, cotton, fish, etc. Pensacola, St. Augustine, Fernandina, Palatka. Tallahassee, Tampa, Appalachicola, Gainesville, Lake City St. Petersburg, Miami and West Tampa are important cities and well known resorts. Key West is an island at the southern extremity of the State, connected with the mainland by rail. Tallahassee is the State capital. Florida had at the last census 54,006 farms, and its farm products valued at $91,893,000. It has 5,299 miles of steam railway and 206 miles of electric roads.

GEORGIA—"Cracker State."

Motto: Wisdom, justice. moderation. Flower: Cherokee rose.

Area: 59,265 square miles. Population: 2,895,832. Population per square mile: 48.7.

Georgia was first included in the Charter of the Carolinas. The first settlements were made on the Savannah River in 1733 by General Oglethorpe. In 1752 the charter was surrendered and Georgia became a royal colony. Delegates were appointed to the Continental Congress in 1775, but, unfortunately, the royalists obtained the ascendency and those loyal to the cause of the Revolution were compelled to fly to the Carolinas. At the close of the war, however, Georgia was given up to the Union and became one of the original thirteen states in 1788. In 1861 the State seceded and was readmitted in 1870. Georgia is the largest state in the Union east of the Mississippi River. It is skirted by low islands, on which the famous sea island cotton is grown. It is 315 miles long and 250 miles wide. In the south the surface is low and swampy, gradually rising in terraces until it reaches the region of the Appalachian Mountains occupying the northern counties. The highest point is Brasstown Bald Mountain, 4.768 feet above the sea level. The soil along the coast is light but a rich alluvial in the interior. Palmetto, magnolia, cyprus, gum trees and the celebrated Georgia pine grow in abundance. The Savannah River is navigable to Augusta. The Altamaha, Oconee, Ocmulgee, Ogeechee, Satilla and the St. Marys are other important rivers affording many miles of inland navigation. There are many mineral springs. Along the southern border the climate is almost tropical, the northern part being cooler and more healthful. Snow sometimes falls in the north but does not remain long. The pine barrens attract many invalids and in the mountainous regions there are popular health resorts. The State has a good system of schools and a large number of higher educational institutions. The capital and largest city is Atlanta, one of the largest manufacturing centers in the South. Savannah, the second city of the State, is an important port of entry. the industries are mostly connected with cotton seed products. Augusta, Macon, Columbus, Rome and Milledgeville, which was the capital previous to 1867, are other well known cities. Athens, Albany, Americus, Brunswick, Dalton, Gainesville, Griffin. LaGrange, Marietta, Elberton, Dublin, Cordele, Fitzgerald, Newnan, Thomasville, Valdosta and Waycross are also important places. Georgia leads all the southern states in manufacturing. It has excellent water power and large iron and cotton mills. Iron, marble and slate are important industries. There is aluminum and coal, besides other valuable minerals. The chief industry, however, is agriculture, cotton, rice, corn and sweet potatoes being the principal staples. Georgia ranks second to Texas in cotton and second to the Carolinas in sweet potatoes. There are 310,737 farms in the State, according to the last census reports. The value of all farm products was $613.240,000. For 1919 the cotton yield was 1,730,000 bales. There are 7,700 miles of steam and 491 miles of electric railways.

IDAHO—"Gem of the Mountains."

Motto. Esto perpetua (May it be perpetual). Flower: Syringa.

Area: 83,888 square miles. Population, 431,866. Population per square mile: 5.2.

After the Louisiana Purchase, Idaho became a part of what was called "Oregon Territory." The State was first explored by Lewis and Clark in 1805-6. It became a Territory in 1863, and a State in 1890. It is the twelfth State in area; larger than all New England. The surface is very broken and mountainous; mean elevation 4,700 feet. Hyndman Peak, 12,078, is the highest point. Idaho is 490 miles long and 305 miles wide. Mountain forests of cedar. spruce, pine and fir abound. Intersecting these are valleys available for farming. In the central part there are park like valleys and grazing lands for cattle. The southern part is the most valuable for grazing and agriculture. Idaho has very picturesque scenery; grand mountains, summit lakes, cataracts, curiosities of lava beds. Here is the famed "City of Rocks" and along its eastern border the Falls of the Shoshone. A small part of the Yellowstone Park lies within the State. Tributary streams of the Columbia pass through Idaho. Great water power sites await development. The Pend d'Oreille, into which the Clark River flows, accommodates steamers. The climate is variable. The valleys are dry and equable, and the mountains cold, some being covered with perpetual snow. Generally speaking, the summers are cool and pleasant. Sunshiny days average 257 yearly. A State Board of Education supervises the public school system. Superior education is given by the College of Idaho at Caldwell and the State University at Moscow. The State has two Normal Schools, an Industrial Training School and a School for the Deaf and Blind. The capital and chief city is Boise, the only city in the world supplied with hot water from a hot well. Blackfoot, Bingham, Caldwell, Coeur d'Alene, Hailey, Idaho Falls, Lewiston, Moscow, Nampa, Owyhee, Pocatello, Twin Falls and Wallace are important cities. Mining and stock raising are the principal industries. Some of the richest placers and veins are within the State. The mountains abound in gold and silver. Mills and smelting works are found everywhere. There are immense mica beds. Marble, limestone, coal, granite and salt are plentiful. Notwithstanding the fact that Idaho is more emphatically a mining and stock raising state, much attention is given to agriculture and the lumber industry. A great part of the State is naturally arid, but extensive irrigation works have been carried out, irrigating 3,226,386 acres, and other works, costing $18,811,000. are being constructed for the irrigation of 480,000 acres more. At the last census there were 41,109 farms, and the value of the farm product was $114,430,000. The last annual wool clip was 14,250,000 pounds, valued at $2,257.200. The State contains 19,379,567 acres of national forest. There are 2,913 miles of steam railways and 113 miles of electric roads.

ILLINOIS—"Sucker State."

Motto: State sovereignty, national union. Flower: Violet.

Area: 56,665 square miles. Population: 6,485,280. Population per square miles: 115.7.

Illinois derives its name from the Indian Tribal confederacy of that name; first settled at Cahokia and Kaskaskia in 1682. by the French. Came under British authority in 1763. In 1809 it became a Territory, and a State in 1818. The Indian massacre at Fort Dearborn occurred in 1812. From 1840 to 1844 there were serious Mormon troubles and riots. Illinois sent 260,958 soldiers to the Civil War. The greatest length of the State is 380 miles; greatest width 205 miles. It is a prairie State and has very little inequality of surface, the highest point being 1,241 feet above sea level, at Charles Mound, in Jo Daviess County. The most hilly parts are in the south, while throughout the central and northern portions are fertile and for the most part level prairies, with many fine forests. Bituminus coal is largely distributed throughout the State and there are some ores, copper, lead, zinc and marble. The western boundary is formed by the Mississippi. The principal river wholly within the State is the Illinois, which is navigable for 245 miles and is one of the nation's big fish producers. It is formed by the Kankakee and the Desplaines. The Vermillion joins it at Vermilion Rapids. The Kaskaskia is navigable for 150 miles and flows 250 miles to the Mississippi. Rock River flows 120 miles in Illinois. The Sangamon is navigable 100 miles and reaches the Illinois at Browning. Other rivers are the Saline, Embarrass, Little Wabash, Big Muddy, Big Vermilion and Fox. The State possesses many valuable water power plants. In the northern part are many small lakes which are popular summer resorts. In the valleys of many streams are found the works of the "Mound builders." The climate is generally salubrious and the death rate low. Constant breezes temper the heat of summer and the winters are not usually severe. The Illinois educational system ranks high. Institutions of higher education are among the best in the land. Chicago is the largest city in the State and after New York is second in the United States. It is the greatest packing and live stock market in the world. Springfield, the capital, Peoria, Quincy, Rockford, Bloomington, Aurora, Joliet, Alton, East St. Louis, Cairo, Champaign, Danville, Elgin, Evanston, Freeport, Galesburg, Oak Park, Decatur, Belleville, Rock Island and Moline are other important cities. Nearly every county has a city or town well worth mention. Illinois leads in the manufacture of farm implements and in the production of coal is second only to Pennsylvania. It also ranks high in agriculture, dairy farming and stock raising. The number of farms in the State at the last census was 237,153. The value of farm products was $813,164,000. There are 13,275 miles of steam railway and 3,724 miles of electric road in the State.

INDIANA—"Hoosier State."

Flower: Carnation.

Area: 36,354 square miles. Population: 2,930,390. Population per square mile: 81.3.

Indiana (Land of Indians) was first settled at Vincennes by French Canadians who later established several trading posts. In 1763 all this region was ceded to the British. In 1778 Col. George Rogers Clark captured Vincennes for the Americans. In 1800 it became a Territory and included what is now Michigan and Illinois. In 1805 Michigan and in 1809 Illinois were created separate Territories, leaving Indiana with its present limits. It was admitted into the Union in 1816. The surface is generally level, there being no mountains and few hills, the highest point is near Carlos in Randolph County, 1,210 feet above sea level. The northwestern part is quite low and sometimes marshy. The lowest point is at the mouth of the Wabash River. The State is 265 miles long and 160 miles average breadth and has a 40 mile frontage on Lake Michigan Its rivers are the Wabash, navigable at seasons to Terre Haute, the White River, the Kankakee, the Iroquois, the St. Mary's and the Ohio, which forms the southern border. The climate is generally healthful, though there is some malaria in the marshy lands. The educational interests of the State are well advanced. The State Board of Education includes in its membership the Governor, the Superintendent of Public Instruction, Presidents of the State Universities and Normal Schools. The public schools are in excellent condition and rank among the very highest in standard of the country. The school age is from 7 to 16 years. The state has won distinction for its literary output. Congress in its early days of statehood set apart an entire township of land for its State Seminary, which institution developed to be the present Indiana State University at Bloomington. Purdue University, which is located at Lafayette, contains the Departments of Agriculture and Mechanics. While the manufacturing and mining interests have reached considerable magnitude, agriculture leads. Stock raising, farm animals and dairy products contribute largely to the wealth of the State. There are extensive mines, producing a fine quality of coal, large quarries of building stone and some iron ores. Indianapolis, the capital, is the largest city in the Union not on any navigable water. It is quite an important railroad center, also one of the great automobile manufacturing centers. It has the greatest speedway in America. Gary has experienced a most wonderful growth; it is one of the leading cities on Lake Michigan and the greatest market for steel and kindred products the world has ever known. Fort Wayne has extensive railroad machine shops. Evansville, a port of entry on the Ohio River, South Bend, a seat of extensive manufacturing, New Albany, noted for glass works, woolen mills, and locomotive and car manufacturing, Terre Haute, Lafayette, Logansport and Richmond, are among the most important cities. Other principal cities and towns are Anderson, East Chicago, Elwood, Huntington, Kokomo, Marion, Mishawaka, Jeffersonville, Vincennes, once the capital, Michigan City, lake port, Elkhart, Laporte, Hammond, Crawfordsville, Peru, Muncie, Newcastle and Whiting. Number of farms in the State last reported was 205,124, and the total value of farm products for the same year was $503,940,000. There are 7,707 miles of steam railway and 2,420 miles of electric railway.

IOWA—"Hawkeye State."

Motto: Our liberties we prize, and our rights we will maintain.

Flower: Wild rose. Area: 56,247 square miles.

Population: 2,404,021. Population per square mile: 43.2.

Iowa, first settled in 1686 near Dubuque, took its name from the Ioway Indians. It was made a separate Territory in 1838 and was admitted into the Union as a State in 1845. It extends 300 miles from east to west and 210 miles from north to south. The surface is mostly rolling prairie, intersected by numerous rivers with wooded banks. The soil is generally very fertile; in the northeast it is somewhat hilly. The Mississippi and Missouri rivers form its eastern and western boundaries. The Des Moines, the Iowa, Cedar, Wapsipinicon, Big and Little Sioux are the principal rivers which drain the interior surface. There are a few lakes. The great dam at Keokuk utilizes the Mississippi river for hydroelectrical power. The high climate is healthful; the heat of summer is tempered by continual breezes. Iowa is well supplied with schools, common, normal and colleges. There are many higher educational institutions. Des Moines, the capital, Davenport, Dubuque, center of the lead district, Burlington. Sioux City, Council Bluffs, Cedar Rapids, Clinton, Fort Dodge, Iowa City, Keokuk and Muscatine are among the large cities; other important places are Fort Madison, Marshalltown, Boone, Cedar Falls, Charles City, Creston. Centerville, Fairfield, Le Mars, Mason City, Oskaloosa, Oelwein, Ottumwa and Waterloo. Iowa is pre-eminently an agricultural state, an ideal pastoral country; fully half its population live by farming. It is unsurpassed for cereal cultivation. Dairy interests are very extensive, and it takes front rank in the raising of cattle, swine and poultry. Its principal manufacturing interests are in agricultural implements, brick and tile. lumber mill products and meat packing. It possesses large areas of coal fields and in the northern part there are thousands of acres of peat bogs of fine quality. In the northeast are valuable lead mines, iron ore and excellent building stone; gypsum, potter's clay and fire clay are important products. At last reports there were 213,312 farms in the State, and the value of all farm products was $861,338,000. There are 10,129 miles of steam railroads in the State, besides 946 miles of electric roads.

KANSAS—"Sunflower State."

Motto: Ad astra per aspera (To the stars through difficulties).

Flower: Sun Flower. Area: 82,158 square miles.

Population: 1,769.257. Population per square mile: 21.5

The State of Kansas was named for the Kansas Indians. Spanish adventurers explored it in search for gold in 1541. French fur traders took possession of it in 1705. Most of its territory came into possession of the United States in 1803 through the Louisiana purchase, but it was not until 1848 that the entire Territory was annexed. It was organized into a Territory in 1854 and immediately became a field of fierce controversy between Northern and Southern settlers on the slavery question. This strife hastened the coming of the Civil War; Kansas had been the scene of turmoil and bloodshed for nearly five years. In 1861 it was admitted into the Union with a constitution prohibiting slavery. The State is 400 miles long from east to west with a breadth north and south of 200 miles. Near Fort Riley, within its border, is the geographical center of continental United States. The surface, slightly undulating, slopes toward the southeast, steadily rising to the west, with an extreme elevation of 4.135 feet at the western boundary. There are no mountains, but the scenery is relieved by hills and river valleys, with bluffs along the Arkansas and Republican rivers. Except in the west it is well watered by the Missouri, the Kansas, Smoky Hill, Saline, Republican, Big Blue, Little Blue, Arkansas, Delaware, Wakarusa. Cottonwood, Verdigris and Cimmaron. The interior rivers furnish good water power, but are not navigable. There are a few lakes. The soil is fertile, even the high prairies in the west producing abundant crops. There is considerable timber along the streams in the eastern portion, but it is scarce in the western. In the east there are large beds of coal and some fairly good building stone. In central Kansas are inexhaustible beds of rock salt. Lead and zinc are extensively mined in the southeast and there are rich oil and gas producing areas. The winters are mild and the air dry and healthful. The summers warm but not oppressive, the atmosphere being extraordinarily dry and clear. Greatest rainfall is in the season most needed for crops. Persons suffering from pulmonary complaints find great relief in the dry atmosphere of this State. That the air has much to do with the energy characteristic of its people is no doubt quite true. There is an efficiently organized school system, well endowed and supported. Kansas is well supplied with institutions of higher education. Kansas City, formerly Wyandotte, is the largest city in the State. Its stock yards and packing houses do a business second only to Chicago. The east side of the city is in Missouri. Topeka, the capital, Lawrence, Atchison, Leavenworth, Wichita, Emporia and Fort Scott are the larger cities; other important cities and towns ade Pittsburg, Galena, Hutchinson, Ottawa, Arkansas City, Chanute, Cherryvale, Coffeyville, Independence, Iola, Junction City, Manhattan, Newton. Parsons, Salina, Wellington and Winfield. In arable lands, Kansas is said to be the second state. It leads all the states in wheat production and is among the foremost in corn growing. All cereals are produced in abundance, and it is noted for cattle, dairy products and fruit. Kansas fruits are of most excellent quality. Poultry and eggs are produced plentifully in all parts. There were at last reports 165,287 farms, and the value of the entire farm products was $631,784,000. There is a fine railway system embracing 9,356 miles of steam roads, facilitating the movement of the vast products of field, prarie and garden, of mine, quarry and factory to the best markets. There are 539 miles of electric railway.

KENTUCKY—"Blue Grass State."

Motto: United we stand, divided we fall.

Flower: Goldenrod. Area: 40.598 square miles.

Population, 2,416,630; per square mile, 60.1.

The Indian name of this region signifies "dark and bloody land." It was originally a part of Virginia. The Cumberland river was visited and named by a party of Virginians in 1747, and Kentucky soon became famous as a hunting ground. Daniel Boone was among the first explorers, and made a settlement at Boonesboro in 1775. In 1776 the State was constituted a county of Virginia. It became a separate Territory in 1790, and was made a State in 1792. In 1861 the legislature declared its loyalty to the Union and although three days later a convention at Russellville passed a secession ordinance, its action had no legal standing. From east to west the extreme length is 350 miles, and from north to south a breadth of 175 miles. The Cumberland ranges are its only mountains. The eastern section is very broken; along the deep channel of the Kentucky river are precipices 300 feet high. West of this mountainous region in the central part is the famous blue grass country. From east to west the scenery is very diversified. The work of ancient mound builders is found almost everywhere. The highest point within the State is at Big Black Mountain, in Harlan county, 4,000 feet above sea level. The State is well wooded; there are sections west of the blue grass region covered with forest trees that were prairies fifty years ago. The Ohio river separates it from Ohio, Indiana and Illinois, and the Mississippi passes the south-western border. The Tennessee and the Cumberland rivers, which parallel each other a distance of about 125 miles, are the largest rivers flowing through the state. Both are navigable for the greatest part of their course. The Kentucky is navigable in high water to Frankfort. The Big Sandy and the Tug Fork separate the State from West Virginia. Green river. navigable 150 miles, and Salt river, which flows along salt licks, are among the streams which water the State. There are also many noted springs. Greatest attraction is Mammoth Cave, which has been explored for 18 miles. There are found cataracts, navigable waters of Echo river, domes and avenues at various levels. Kentucky's climate is mild and remarkably healthful, and the State is an excellent home for invalids. There is a State board of education, superintendent of schools and county superintendents. Kentucky is supplied with State, sectarian and non-sectarion universities and other institutions of higher education. Louisville is the largest city and the greatest tobacco market in the world. Covington, once the capital, Newport, a former capital. Lexington and Frankfort, the present capital, are important cities; all have historical names. Lexington has a monument to Henry Clay. Other cities and towns of importance are Ashland, Bellevue, Bowling Green, Danville, Dayton, Georgetown, Henderson, Hopkinsville, Mayfield, Maysville, Middlesboro, Paducah, Paris, Owensboro, Richmond, and Winchester. Kentucky is an agricultural State. It produces a large share of the tobacco raised in the country, and of an excellent quality. Some cotton is also grown. It is a fine fruit and pasture land. Here are found the finest breeds of horses and cattle as well as mules and swine; iron and iron goods, agricultural implements, mill products and lumber and timber products are its chief manufactures. There are 270,676 farms, and the value of all farm products was $476,863,000. The State has 4,013 miles of steam railways, and 494 miles of electric railway.

LOUISIANA—"Pelican State."

Motto: Union, justice, confidence.

Flower: Magnolia. Area: 48.506 square miles.

Population, 1,798,509; per square mile, 39.6.

Louisiana, named for Louis XIV, of France, was first visited by Spaniards in 1541. La Salle took possession of it in the name of Louis XIV, in 1682. It was conveyed to Spain in 1762, returned to France in 1800 and sold to the United States in 1803 for $15,000,000 as part of the Louisiana Purchase. The American flag was first unfurled in New Orleans in 1804. In 1812 the State was admitted into the Union. The State seceded in 1861 and was restored to the Union in 1868. Several battles were fought within its borders during the civil war. The surface is low; the highest point being in Claiborne county, 400 feet above tide water. The Delta of the Mississippi, while swampy in spots, has many valuable sugar and cotton plantations. Almost to the north border the land is so low levees have been constructed to restrain the waters of the river. Pine forests abound. In the southwest there are extensive prairies called "trembling prairies." There are shallow bays and lakes along an irregular coast line. The Mississippi is navigable from its mouth to Minneapolis. The Eads system of jetties at the mouth of the river has produced a channel navigable for the largest vessels. Red river is navigable to Shreveport. The Ouachita is navigable 300 miles to Camden. The Sabine on the west and Pearl river on the east are important streams. The Tensas accommodates steamers a distance of 150 miles. There are large lakes and lagoons and ponds in the salt marshes. The climate is semi-tropical. the summers being long and hot. The winters are short and not severe. A State board of education is elected for four years. There is a State superintendent, assisted by parish boards who act as examiners. Separate schools for colored pupils are maintained. There are State, sectarian and non-sectarian universities and institutions of higher education. New Orleans is the largest city. It is protected from the Mississippi overflow by levees. In this city the "Mardi Gras" is celebrated each year. Baton Rouge, the capital, and Shreveport are important cities; the latter being the second city in the State. Alexandria, Crowley, Donaldsonville, Houma, LaFayette, Lake Charles, Monroe, Morgan City, New Iberia, Opelousas and Plaquemine are other cities well known as agricultural or manufacturing centers. Louisiana is the only State that cultivates true sugar cane successfully. Rice, cotton, and corn are leading crops. Cattle raising and market gardening are profitable industries. Lumber and forest products, cotton seed oil, peanuts and castor oil add to the State's wealth. There are 135,455 farms. Total value of farm products was $231,506,000. There are 5,646 miles of steam and 318 miles of electric railways.

MAINE—"Pine Tree State."

Motto: Dirigo (I direct).

Flower: Pine cone and tassel. Area: 33,040 square miles. Population, 768,014; per square mile, 25.7.

The name of this State originated with the earliest explorers, who used the word "Main" to distinguish it from the many coastal islands. Was probably first visited by Northmen about the year 1000. Visited by Cabot in 1497; named "New France" by French explorers in 1524. First English settlement at mouth of Kennebec river in 1607, but abandoned and a permanent one made at York. In 1652 the province was placed under control of Massachusetts and was purchased for 1,250 pounds in 1677 by that State. Its separation and formation into its present boundaries was accomplished by popular vote in 1819 and it was made a State of the Union in 1820. In 1851 the "Main Law," prohibiting the sale of intoxicating drinks was passed. Maine's greatest length is 235 miles, greatest width 205 miles. The surface is hilly, with considerable elevation in the center. The highest point, Mt. Katahdin, 5,273 feet above sea level, in the extension of White Mountains. Including bays, inlets and islands the coast line is said to be 2,400 miles long, though it is but 260 miles long in a straight line. There are a great number of small lakes. Moosehead Lake is 35 miles long. The Penobscot River is navigable for large vessels to Bangor. Along the Kennebec there is excellent water power. The Androscoggin, the St. Croix, Piscataqua, Aroostook, and Walloostook are all valuable to the manufacturing and agriculture of the State. There are still fine forests, though considerably depleted by the cutting of lumber. In the northern part and among the mountains wild game and animals are found and these sections are a paradise for the hunter. Fish are also plentiful in lakes and rivers. All kinds of building stone are abundant, and there are many valuable minerals. The summers are short, but vegetation is early, as continual snows prevent deep freezing. The State is a well known health resort. $1,500,000 is raised annually by the State for the public school system. A State superintendent is appointed by the governor. The school age is seven to fifteen years. Higher institutions of education are well represented, of which some are the oldest in the United States. Portland is the largest city and has an extensive commerce. It is the winter port of several Canadian lines. Lewiston and Augusta, the capital, are other important cities; besides these are Bangor, Auburn, Bath, Biddeford, Brewer, Brunswick, Calais, Caribou, Eastport, Gardiner, Houlton, Old Town, Rockland, Rumford Falls, Saco, Sanford, Skowhegan, South Portland, Waterville and Westbrook, all doing a manufacturing and commercial trade of value. Lumbering is the leading industry; fisheries, ice packing, fish canning, quarrying and cotton goods manufacturing are important interests. Maine is celebrated for its fine marble, granite and slate. About a third of the State is devoted to agriculture, the chief farm products being the cereals, hay and potatoes. The number of farms at the last census was 60,016 Total value of all farm products for the same year was $99,-200,000. There are 2,352 miles of steam and 528 miles of electric railways.

MARYLAND—"Old Line State."

Motto: Fatti maschili, parole femine (Deeds, men; words, women).

Flower: Black-eyed Susan. Area: 12,327 square miles. Population, 1,449,661; per square mile, 145.8.

Maryland was named for Queen Henrietta Maria. The colony was originally granted to Lord Baltimore in 1633. It was one of the original thirteen States, joining the Union on April 28, 1788, and, although a slave State, it remained in the Union throughout the Civil War. It has a length of 200 miles and a width varying from 5 to 120 miles. Chesapeake Bay divides it into two unequal parts. In the west there is an elevated region traversed by ridges of the Allegheny Mountains. The rivers are not important, but Chesapeake Bay is a noble sheet of water, varying from 10 to 40 miles wide. From the ocean, where it is 20 miles wide, it stretches northward 180 miles. The climate is mild, modified by the vicinity of the sea, and is for the most part healthful. The highest point, in the State is Mount Backbone, Garrett county, 3,340 feet above sea level. Baltimore is the metropolis and the most important seaboard city south of Philadelphia. It manufactures largely iron and machinery and is specially noted for its monuments. Annapolis is the capital and here the U. S. Naval Academy is located. It has quite an export trade in oysters and tobacco. Frederick is an important city and is the site of many historic events. Cambridge, Cumberland, Frostburg, Hagerstown, Havre de Grace, Salisbury, Wicomico and Westminster are all large and wealthy cities and towns, noted for commerce and manufacturing. Agriculture is the chief industry. Maryland is famed for its fruit. There are 47,908 farms in the State, and the total value of all farm products is $132,743,000. The value of tobacco raised as last reported was $6,872,-000. Maryland cans 40 per cent of the tomatoes put up in the United States yearly. Dairy and poultry products amount to over $10,000,000 each year. The production of horses, cattle, sheep and swine is enormous, considering the area of the State. The output of coal is nearly $5,000,000 annually. Some little iron ore is also produced. Quarrying, too, is of great importance, all sorts of stone being found in abundance. Brick, tile and pottery manufactures amount to $2,000,000 yearly. The oyster fisheries yield more than any other State. The value of all fishing products amounts to about $3,500,000 annually. Manufacturing interests are varied and extensive, amounting to nearly $380,000,000 a year. There are 1,450 miles of steam and 693 miles of electric railway lines.

MASSACHUSETTS—"Bay State."

Motto: Ense petit placidam sub liberate quietem (By the sword he seeks repose settled under liberty).

Area: 8,266 square miles.

Population, 3,852,356; per square mile, 479.2.

Massachusetts, named for the Indian tribe, meaning "at the great hills," was probably first visited by the Norsemen, nearly five centuries before the time of Columbus. The first settlement, however, was made by the Plymouth Colony in 1620. The early struggles of these Pilgrim fathers are well known to every American. The first battle of the War of the Revolution was fought on the soil of Massachusetts. It has been called the cradle of American liberty. The Federal Constitution was adopted in 1788. It has an extreme length, diagonally, of 190 miles, and a breadth of from 47 to 110 miles, and excepting Rhode Island is the most thickly populated State in the Union. The surface is low and sandy in the east, hilly in the center and mountainous in the west. It is well watered by streams that furnish an abundance of water power. The Housatonic River has a cataract 150 yards wide and a 60-foot perpendicular fall. The winters are severe, snow usually covering the ground during three months. The summers are hot, spring comes early and the autumn is long and often delightful. The eastern section is not favorable to consumptives. The public school system of Massachusetts is second to none in the country. There is a State board. School attendance is compulsory from seven to fourteen years. Towns of 500 families are required to support a high school and cities of 20,000 or more are obliged to maintain manual training as part of both elementary and high school systems. Institutions of higher education are well supplied. Liability for support of relatives extends to parents, grand parents, children and grand children. Boston, the capital, is the metropolis. It has one of the best harbors in the world, and in its commerce, is second only to New York. It is especially noted for its fine libraries, its schools and universities. Lowell has been called the Manchester of America from the extent of its manufacturing. The falls of the Merrimac give it almost inexhaustible water power. Cambridge is the seat of Harvard University; Fall River has large manufacturing interests. Lynn is famous the country over as a boot and shoe manufacturing city. Lawrence has extensive woolen and paper mills. Springfield contains the United States armory, employed in the manufacture of rifles; it is a great manufacturing center, with magnificent water power. New Bedford and Salem have large manufacturing interests. Worcester is a manufacturing center and the second city in the State. Adams, Amesbury, Arlington, Attleboro, Beverly, Brookline, Brockton, Chicopee, Clinton, Everett, Framingham, Gardner, Gloucester, Fitchburg, Haverhill, Holyoke, Hyde Park, Leominster, Malden, Marlboro, Medford, Melrose, Milford, Newburyport, North Adams, Northampton, Peabody, Pittsfield, Plymouth, Quincy, Revere, Newton, Somerville, Taunton, Waltham, Watertown, Westfield, Weymouth and Woburn are also large and wealthy manufacturing cities. More than half the area of the State is improved, but the land is not fertile. There are 31,982 farms in the state, products valued at $76,191,000 in 1920. The cereals, potatoes and tobacco are raised: dairy products are of much importance. The chief industry is manufacturing. Boots and shoes, cotton and woolen goods, foundry and machine shop products, leather, paper and rubber goods are sources of enormous profit. Slaughtering, packing and fisheries are valuable industries. Quarries add largely to the State's resources. Millions of dollars worth of granite is sold annually. There are 2,134 miles of steam and 3,117 miles of electric surface and elevated railways in the State.

MICHIGAN—"Wolverine State."

Motto: Si quaeris peninsulam anoenam, circumspice (If you seek a delightful peninsula, look about you).

Flower: Apple blossom.

Area: 57,980 square miles. Population, 3,668,412; per square mile, 63.8.

Michigan is from an Indian word, meaning "great lake." It was first settled by the French in 1650. It was ceded to Great Britain in 1763 and was given up to the United States in 1795, but it was not until after the war of 1812 that this was fully confirmed. Michigan was admitted into the Union in 1837. Its first capital was Detroit; then changed to Lansing in 1847. The State is divided by Lake Michigan and Lake Huron into two irregular shaped peninsulas; the northern being rugged, even mountainous in its western part, and the southern an undulating plain with, for the most part, a very fertile soil. The highest point in the state is in Ontonagon county, Porcupine mountain, 2,023 feet above sea level. There are over 1,600 miles of lake shore line bordering the State. Michigan is well watered by numerous rivers and has valuable water power. The winters of the upper peninsula are very severe but in the summer it is considered a health resort. In the lower peninsula there is a great deal of snow in winter. The summers are warm, often exceedingly hot in the day time but temperate during the night. The State ranks high in education. Detroit, the largest city, is one of the most important cities on the lakes, as well as the western gateway for Canada. The fact that its population has more than doubled the past ten years, having increased from 465,766 in 1910 to about one million is evidence of how its commercial interests are growing, it being the world's greatert automobile manufacturing center. Hamtramck and Highland Park, suburbs of Detroit, are also noted for their automobile industries and their rapid growth, having gained over 1,000 per cent since the 1910 census. Lansing, the capital, possesses the beautiful state building. Battle Creek has large manufacturing interests. Kalamazoo is noted for its paper mills, Ann Arbor for the State University. Grand Rapids for its furniture industries. Jackson for its cement machinery and automobile factories. Muskegon for its lumber interests. Saginaw for its planing mills and iron works. Bay City for its lumber and salt, Flint for its state asylums and extensive automobile manufactures, Adrian for its car shops, Port Huron for its ship building and lumber. Calumet is the center of the great copper mining district; here is located the famous "Calumet and Hecla" mine— the richest copper mine in the world. Houghton and Hancock are also flourishing cities in the copper country. The Michigan College of Mines is located at Houghton.

Marquette, known as the "Queen City of Lake Superior," is the metropolis of the mining interests of the Lake Superior iron region. Ishpeming, Negaunee, Ironwood and Iron Mountain are all growing cities in the Iron region. Escanaba is an important ore shipping point. Manistee and Menominee are noted for their great lumber interests. Alpena, Holland, Pontiac, Sault Ste. Marie and Traverse City are other large and growing cities. Agriculture is the chief industry. There are 196.647 farms in the state and the total value of all farm products the past year was $415,615,000. Of scarcely less importance are the mining, lumber and manufacturing interests. Over $55,000,000 worth of copper, iron ore and silver is taken out of the mines every year. The lumber output is over $40,000,000. Milling interests are about $27,000,000 and manufacturing adds more than $1,000,-000,000 to the state's wealth. There are 8,969 miles of steam and 1,762 miles of electric railway.

MINNESOTA—"Gopher State."

Motto: L'etoile du nord (Star of the north). Flower: Moccasin.

Area: 84,682 square miles. Population, 2,387,125; per square mile, 29.5.

Minnesota, named from the river, had for a century after it was known to the first white man been visited only by a few missionaries and French traders. Father Hennepin and two companions ascended the Mississippi as far as St. Anthony's Falls, in 1680. Colonel Leavensworth built Fort Snelling in 1819. Settlements at Pembina were made by Lord Selkirk, who supposed them to be within the limits of British America. Minnesota became a territory in 1849 and in 1858 it was made a state of the Union. Since that time no state has been more progressive, or more rapidly risen to wealth and position. It is 400 miles in extreme length and 350 miles extreme width and is for the most part separated from Canada on the north by a chain of lakes and a river extending from Lake of the Woods to Lake Superior. The surface is an undulating plain with an average height of 1,275 feet. The highest land is in St. Louis county, the Mesaba range, 1,920 feet above sea level. About half the state is prairie interspersed with belts of timber and a great many lakes. The central elevation of land is a watershed dividing the waters flowing north from those flowing south. The Mississippi, the Red River of the North and the St. Louis with their tributaries are the principal rivers. Probably there are 7,000 small lakes varying from one to thirty miles long. In the northeast are the Messaba Range iron ore deposits, from which Pittsburgh, Cleveland, Gary and other manufacturing centers are supplied. Spring and autumn are long, the summers are hot but short and the dryness makes them very pleasant. Minnesota has a school system of the highest order. St. Paul, the capital, is the focus of several large railroads, and the center of a large wholesale and retail trade; Minneapolis, the largest city, is indebted for much of its prosperity to the abundant water power of the Falls of St. Anthony. It is the largest flour-milling center in the world. Duluth is an important and growing city noted for lumber, iron and shipping interests; Winona is a great wheat market, the largest city of southern Minnesota, Stillwater with large lumber and commercial interests, Mankato, a prosperous manufacturing city, Red Wing, an important agricultural center and Faribault, a rapidly growing city, are all large centers of wealth, with fine schools and public buildings. Other scarcely less important cities are Albert Lea, Austin, Brainerd, Bemidji, Chisholm, Cloquet, Crookston, Eveleth, Fergus Falls, Hibbing, Little Falls, New Ulm, Owatonna, Rochester, St. Cloud and Virginia. No State has made more wonderful progress in agriculture during the past twenty years than Minnesota. There are 178,588 farms. The total value of all farm products is $497,736,000. The wool clip amounts to nearly $600,000 yearly. Minnesota is the leading flour-milling State, the principal or largest manufacturing establishments being the flour mills. There are other valuable manufacturing interests, however, such as boots and shoes, lumber, clothing, furniture, metal goods, and machinery. The total output of all manufactured goods is over $493,000,-000 each year. The mining of iron ores and quarrying of many varieties of building stone have reached great importance. There are 9,392 miles of steam and 732 miles of electric railway.

MISSISSIPPI—"Bayou State."

Flower: Magnolia.

Area: 46,865 square miles. Population, 1,790,618; per square mile, 38.5.

Mississippi, named for the river, was first visited by De Soto in 1541. The first settlement was made in 1700 in which year a fort was built at Biloxi. Natchez was settled in 1716. Mississippi Territory was formed in 1798 and in 1817 it became a State in the Union. It seceded in 1861 and was re-admitted into the Union in 1870. The extreme length of the State is 340 miles and the width 180 miles. Including irregularities there are nearly 175 miles of coast line. The surface has generally a southern slope, rising toward the northeast from 400 to 600 feet, and some hills being elevated 200 to 300 feet more. The highest elevation is at Holly Springs, Marshall county, 600 feet above sea level. The "bottom lands" lie between Vicksburg and the Tennessee border; they are low and swampy but extremely fertile. To the center and south it is generally hilly though there are some extensive marshes along the gulf. At Biloxi, Mississippi City, and Bay St. Louis there are harbors of medium depth only. Biloxi, Pass Christian, Ocean Springs, Beauvoir and other gulf points are popular winter resorts. The state is well watered by the Mississippi and its tributaries, also the Pearl and Pascagoula Rivers. Much of the surface is covered with primitive forests of valuable woods. The climate is very mild; snow and ice are almost unknown. The summers are long and there is considerable malaria along the swampy marshes. The northern parts of the state are very healthful. Education is well cared for, but there is as yet no compulsory law. White and colored children are taught in separate schools. There are normal schools as well as colleges and universities. Meridian is the largest city and is interested in cotton and lumber. Cotton manufacturing and cotton seed oil are the principal industries of Vicksburg. Jackson, the capital, has a large cotton trade. Natchez is a very busy city, second only to Meridian. Cotton is its chief article of commerce. Aberdeen, Biloxi, Brookhaven, Columbus, Corinth, Greenville, Greenwood, Gulfport, Hattiesburg, Laurel, McComb, Water Valley, and West Point are all large and growing cities with commerce and manufacturing. Agriculture is the principal industry. There are 272,437 farms and the value of all farm products was $494,192,000 last year. The chief product is cotton, the yield of which for 1919 was 946,000 bales, valued at $177,375,000. Nearly all the cereals, potatoes and tobacco are grown abundantly. The state also has great wealth in its horses, cattle, sheep and swine. There are oyster and other fisheries, the products of which amounts to over half a million annually. Mining interests are small. Manufacturing industries amount to about $79,550,000 yearly. There are 4,450 miles of steam and 117 miles of electric railway.

MISSOURI

Motto: Salus populi suprema lex esto (Let the people's safety be the supreme law). Flower: Goldenrod.

Area: 69,420 square miles. Population, 3,404,055; per square mile, 49.5.

Missouri is from an Indian word meaning "muddy water." It was originally a part of the Louisiana Purchase. Fort Orleans was a military settlement formed in 1719. St. Genevieve was founded in 1755 and St. Louis in 1764. Missouri was admitted into the Union as a State in 1821. It was admitted as one of the slave States. The State is varied as to soil, climate and products. North to South it is 280 miles and east to west 300 miles. North of the Missouri River the surface is for the most part level or undulating, the general slope being toward the southeast, south of the river it is more broken and rugged. The Iron Mountains are in the southeast, and the Ozark in the southwest. Along the Missouri and Mississippi rivers are wide bottom lands of great fertility, and there are lakes, lagoons and impenetrable swamps. Besides the two great rivers just mentioned are the Osage, the Gasconade, the Chariton, the Grand, the St. Francis and the Des Moines. In some parts there are still extensive forests where wild game abound, and there are many beautiful caverns miles in length with hidden lakes and streams. There are also valuable springs, saline, sulphur and iron. Valuable commercial woods are found in the forests and the state is rich in mineral deposits and coal. Missouri leads all the other States in the production of zinc and lead. The climate is, as a whole, healthful, the summers are long and hot, the winters short and usually mild, though there are seasons when the rivers have been frozen solid. The school system ranks very high. Schools are maintained separately for white and colored children. There are fine universities, colleges and normal schools. St. Louis is the largest city, and one of the most important in the United States. In 1904 a World's Fair was held there in commemoration of the Louisiana Purchase. Has many magnificent buildings, botanical gardens and parks, and is one of the great trade centers of the country. Kansas City is a great railroad and live stock center. It has extensive packing interests. Jefferson City, the capital, is on the Missouri River near the center of the state. St. Joseph has large interests in packing, agriculture and manufacturing. Sedalia is the center of a fine farming country. Springfield manufactures engines, boilers, cotton goods, etc. Hannibal has valuable packing and lumber interests. Joplin is the commercial center of the southwestern Missouri lead and zinc mining region, and contains large smelting and white lead works, foundries, and machine shops, flour mills, etc. Brookfield, Cape Girardeau, Carthage, Chillicothe, Clinton, Columbia, De Soto, Flat River, Fulton, Independence, Kirksville, Lexington, Louisiana. Marshall, Moberly, Mexico, Poplar Bluff, Webb City, Trenton, St. Charles, Webster Grove, Wellston and Nevada are large and prosperous cities. Agriculture is the leading industry. There are 263,124 farms, and the value of all farm products last reported was $549,105,000 The chief crops are cereals. The corn crop brings annually no less than $214,469,000 and the wheat crop $120,982,000. Quite a little cotton is grown in the southeastern part. Orchard and small fruit are abundant. The annual wool clip is over 7,500,000 pounds. There is a coal area of 14,000 square miles and the yearly output is valued at $5,060,473. Lead and zinc mines are very valuable and the quarries of building stone are sources of great wealth. Altogether the mineral products are valued at over $50,000,000 a year. Manufacturing interests are very large. These include slaughtering, packing, flour milling, tobacco, boot and shoe manufacturing, lumber and planing mills, bakeries and foundries. There are 8,810 miles of steam and 1,174 miles of electric railway.

MONTANA—"Stub Toe State."

Motto: Oro y plata (Gold and silver). Flower: Bitter root.
Area: 146,997 sq. m. Population, 548,889; per sq. m., 3.8.

Montana is from a Spanish word, meaning "mountain land." It was formerly a part of Idaho, becoming a Territory in 1864 and a State in 1889. It was here on the bank of the Little Big Horn River that General Custer, together with 261 officers and men of the 7th U. S. Cavalry, were slain by Sitting Bull and 5,000 Indians. The eastern two-thirds of the State consists of rolling plains covered with sage and bunch grass. The western third is the mountain region consisting of 40,000 square miles of mountain ranges from 8,000 to 10,000 feet high. with fine valleys and passes. This mountain belt has an average breadth of 180 miles. The Yellowstone, the Missouri, the Columbia and the Saskatchewan rivers have their sources within the state. The Missouri flows nearly a thousand miles on Montana soil. There are many smaller streams. The water power along the Missouri is of immense value. Montana is very rich in gold, silver, lead, copper and many other minerals. The seasons compare favorably with states situated more southerly. The dryness of the atmosphere renders the extreme cold of winter less severe, and the summers are favorable to agriculture and stock raising. The lack of rain is a drawback, which irrigation is removing. Education is making great progress when we consider how widely the population is scattered. There are a University, Colleges and Normal schools. There is likewise a state school of mines. Butte is the largest city. It is in the center of a rich gold mining region and is growing rapidly as shown by the last census. Helena is the capital; it is in the center of the richest mineral regions in the west and is believed to be one of the richest cities of its size in the world. Great Falls has large smelting and refining plants and magnificent water power. Anaconda is well known as a copper center. Billings is noted for its live stock, Bozeman for its flouring mills, Deer Lodge for its gold mines, Dillon for its factories, Kalispell for its commerce. Livingston for its milling interests, Miles City for its cattle exports, Missoula for its railway interests, Red Lodge for its coal mines and Walkerville for valuable silver mines. Montana's chief crop is wheat. Fruit is widely cultivated in the state. There are at the present time 57,441 farms, and the value of all farm products last reported was $81,991,000. Cattle and sheep raising are very important industries. The amount of wool raising is very large. Lumber interests, too, are rapidly increasing, but by far the most important of Montana's resources are in her valuable mines and precious metals, copper, iron, zinc and coal. Nearly eight million dollars' worth of silver, over three million of gold, forty-five million of copper, and six million of coal are produced annually. Manufacturing interests are principally the refining and smelting of copper and lead, slaughtering and meat packing and the manufacture of foundry and machine shop products. There are 5,494 miles of steam and 798 miles of electric railway.

NEBRASKA—"Antelope State."

Motto: Equality before the law. Flower: Goldenrod.
Area: 77,520 square miles. Population, 1,296,372; per square mile, 16.9.

Nebraska was created a separate Territory in 1854 and was made a State of the Union in 1867. East and west its length is 415 miles and north to south its width 205 miles. Within this area are vast tracts of exceedingly fertile soil. There is a slight slope eastward and some hills along the Missouri River. Nearly all the land is arable and almost every section is available for farming or for pasture. The principal rivers flow from west to east or southeast. None of them are navigable. River bottom lands are specially fertile. Except along rivers there is no natural timber, but many groves appear as the result of tree planting. The climate is invigorating and healthful, the air is dry, although there is usually a sufficiency of rainfall except perhaps in the northwest. There are sometimes droughts and frequently severe winter storms. Nebraska holds a high position in public education and, excepting Iowa, contains the smallest number of illiterates of any northern state. School attendance is compulsory for children from 7 to 15 years of age for not less than 12 weeks each year. The public schools are models in every sense. There are graded and high schools in nearly every place and there are many normal schools, colleges and universities. There are few paupers in the state. Omaha is the largest city. It is situated on high bluffs on the west bank of the Missouri River. It has extensive packing, smelting and refining industries. Lincoln, the capital, is a wholesale and jobbing center of importance. There is a fine salt lake near it. Hastings is a city of great prosperity. Plattsmouth manufactures farm implements, carriages, locomotives, machinery, cars, etc. Nebraska City has large manufacturing and packing interests. Beatrice is interested in large quarries of building stone, stock raising, etc. Columbus, Fairbury, Falls City, Fremont, Grand Island, Holdrege, Kearney, Norfolk, North Platte and York are other growing, rich cities. Cattle and live stock are second only to agriculture. At last reports there were more than a million horses, two million head of cattle, four million hogs, and nearly half a million sheep. There are in the state 126,309 farms and the total value of all farm products was $543,482,000. The important manufactures are slaughtering, flour milling, dairy products, railway cars and farm implements. There are 6,254 miles of steam railways and 252 miles of electric lines.

NEVADA—"Silver State."

Motto: All for our country.
Area: 110,690 square miles. Population 77,407; per square mile, 0.7.

Nevada, meaning in Spanish "snowy," the "Silver State". Extreme length, north to south, 485 miles, average breadth 315 miles. Made a Territory March 2, 1861, admitted as a State October 13, 1864. Nevada was part of the extensive purchase from Mexico and was first known as the "Washoe County." In 1848 the Mormons located a colony in the Washoe and Carson valleys. Enormous silver deposits, discovered in 1859, led to increased settlement and statehood. In 1864 its population gradually decreased with the exhaustion of the silver deposits, until the later discoveries of wonderful gold properties brought a large influx of miners and investors and made millionaires in a day of many fortunate seekers of wealth. It is the third largest state in area, but the smallest in population. The surface is an elevated table land, averaging over 4,000 feet above the sea level. In reality it is a series of narrow basins with north and south directions, separated by rugged, high mountains, mostly in short ranges. This arrangement presents a grandeur of scenery nowhere surpassed in the United States. Death Valley is a dangerous arid sand plain. The Sierra Madre Mountains are part of the western boundary, with many elevations over 10,000 feet within the state. East Peak, White Mountains, in Esmeralda county, 13,135 feet, is the highest. The Colorado and the Humboldt are the principal rivers. The principal lakes are the Pyramid, Walker, Carson, Humboldt, Winnemucca and Tahoe. The latter is only partly in Nevada and is one of the most charming scenic waters in the world. The climate is healthful and invigorating. Frosts are rare in the south and east, but the winters in the north are quite cold (as low as 15 degrees F. below zero). The leading source of wealth is its mining industries. The Comstock Lode is one of the richest silver mines in the world, and within recent years gold discoveries have created a revision of estimate of the state's wealth. Salt, borax, sulphur, soda and other chemicals are found. The mountains bear white pine, spruce and fir. Grazing is extensively followed and of late irrigation is making rapid progress in developing hitherto unproductive sections. There are 2,191 miles of steam and 11 miles of electric railway. Public schools are under control of a state board of education. School attendance is compulsory for all children from 8 to 16 years old. Reno, Virginia City, the state's first capital, Carson City, the present capital), Austin, Elko, Ely, Tonopah, Manhattan, Fallon, Eureka, Goldfield, Rochester, Lovelocks and Rawhide are all rich mining cities. Nevada is one of the richest mineral states. About $5,000,000 in gold is taken from its mines annually, of silver, $8,000,000, and, of all minerals, $37,842,084. Agricultural industries are developing rapidly. The Federal irrigation project embraces 160,000 acres of land within the state. Nearly one-fifth of the farm area is already improved and producing excellent crops of wheat, vegetables and fruit. Cattle and all kinds of stock interests are increasing. Manufacturing has not yet reached great importance, but there is considerable flour milling, dairy manufactures and some car making.

NEW HAMPSHIRE—"Granite State."

Area: 9,341 square miles. Population, 443,083; per square mile, 49.1.

Named after the Hampshire county in England. Extreme length, 185 miles north to south; breadth, 45 to 90 miles. One of the 13 original states. The first settlement was made at Little Harbor (1623) and at Dover. At the outbreak of the Revolution the population was 80,000 and the state was strongly patriotic. The natural beauty of New Hampshire is sublime, its higher regions have been termed "The Switzerland of America." The highest peak is Mt. Washington, 6,293 feet, but there are 28 other peaks over 4,000 feet. The state is noted for its many beautiful lakes and ponds. The principal rivers are the Merrimac, the Androscoggin, and the Connecticut. The natural beauties of the state are said to attract more tourists than most other natural objects of the United States. The White Mountains contain twenty or more bold peaks, narrow gorges, wild valleys, beautiful lakes, rivers, cascades and tempestuous torrents. The forests contain much valuable timber. The climate is healthful and epidemics rarely occur. In the mountains snow is found eight months of the year. The summers are hot but short, and the autumn long and pleasant. Average annual temperature, 43 degrees. Rainfall, 39 inches annually. The hilly country affords poor farming; the valleys have fairly good soil. The principal products are hay, potatoes, corn, oats, wheat and tobacco. Fruit is raised profitably, dairy farming and wool growing are carried on to a very large extent. The state has much woodland; manufacturing is a source of great wealth. Cottons and woolens, boots and shoes, leather, paper, furniture, machinery and woodenware are its chief manufacturing products. Iron ore and graphite are mined on a large scale. There are large mica quarries, and New Hampshire granite is of the finest quality, and very largely quarried. Agriculture is, however, still the leading industry, and employs many people. Small as the area of the state is, there are 20,523 farms, and the total value of all farm and dairy products last reported was $40,260,000. Milk cows are largely raised and other cattle bring a high price in the New York and Boston markets. Manufacturing interests are scarcely inferior. Abundant water power renders manufacturing less expensive than where coal must be used. The total manufactured articles at last reports were valued at $182,844,000, over four times the value of farm products, and yet the number of persons engaged in their production was less than half the number engaged in farming. Education is compulsory between eight and fourteen years, during the entire school term. There are many well-known institutions of higher education. Manchester, Nashua, Concord, the capital, Dover, Portsmouth, Berlin, Keene, Rochester, and Laconia are the larger cities. All of them are rich manufacturing centers. Claremont, Derry, Exeter, Franklin, Lebanon, Newport, and Somersworth are thriving cities. There are 1,250 miles of steam and 246 miles of electric railway.

NEW JERSEY—"Jersey Blue State."

Motto: Liberty and prosperity.
Flower: Goldenrod and violet.
Area: 8,224 square miles. Population, 3,155,900; per square mile, 420.0.

New Jersey was first settled in 1620 by emigrants from New York. In 1862 the entire province was purchased by twelve Quakers, headed by Wm. Penn. In 1738 a separate government was instituted by the crown and in 1776 the State joined in the struggle for independence. Entered the Union December 18, 1787. Some of the hardest battles were fought within its borders. It is 160 miles long with an average width of 40 miles. In the north it is hilly; the highest elevation, 1,809 feet, being at High Point. The Palisades form the western bank of the Hudson for 15 miles and form a wall of rock 300 to 600 feet high. Along the eastern and southern sections the surface is low and sandy and declines toward the sea. The center is rolling with a soil particularly adapted to fruit raising. There are good harbors at Newark Bay and Delaware Bay, and in the Hudson, Delaware and Raritan rivers. The Hudson, Delaware, Passaic, Hackensack, Raritan, Navesink, Great Egg, Toms, Mullica and Maurice are its principal rivers. In the southern part are forests of low pine. The climate is mild, somewhat warmer in the southern part, and the State is generally healthful. There is a fine system of public schools and many noted colleges and other institutions of learning. The larger cities are Jersey City, Newark, Camden, Trenton, Elizabeth, Atlantic City, Paterson, Hoboken, New Brunswick, Perth Amboy, Bayonne, Orange and Passaic. Cape May and Long Branch are well known seaside resorts summer and winter. Besides these there are a score or more of important cities, all noted for manufacturing of some kind. At East Orange is the famous Edison laboratory and experimental factory. New Jersey is in fact pre-eminently a manufacturing state. It has stone quarries, iron foundries, silk mills, steel and rubber plants, ship building, textile manufacturing, locomotive works and car building and manufacturing of every conceivable kind, and notwithstanding its manufacturing interest being so extensive it is by no means lacking in agriculture. The State is one immense garden, and supplies to a large extent the markets of Philadelphia and New York in fruits and garden vegetables. The last census reports 29,672 farms in the State, and the value of all her farm products for that year was $105,303,000. There are 2,513 miles of steam railroads. Numerous electric roads connect the different cities and towns, amounting to 1,593 miles of track.

NEW MEXICO.

Motto: Crescit eundo (It increases as it advances).
Flower: Cactus.
Area: 122,634 square mile. Population, 360,350; per square mile, 2.9.

Mines were opened up and missions established by the Spaniards in 1536. Santa Fe was founded in 1542 In 1822 Mexico threw off the Spanish yoke and New Mexico became a part of Old Mexico. At the close of the Mexican War it was ceded to the United States and became a Territory in 1850, although it was not until 1863 that its present boundaries were established. It was received into the Union as a State in 1910. The eastern boundary is 345 and the western boundary 390 miles long; the average breadth is 325 miles. The surface consists of a series of high plateaus, divided by mountain ranges frequently rising into high peaks, some above the snow line, with fertile valleys below. The highest elevation is N. Truchas Peak, 13,306 feet. Below Santa Fe is an almost continuous range bearing local names running along the east side of the Rio Grande. On the west side of the river, range after range of peaks continue until they reach the continental divide. The Rio Grande, well termed the American Nile, is the principal river; it is narrow, swift and shallow. In hot weather it is often dry for 100 miles above El Paso, the water being consumed by evaporation and irrigating canals. The Pecos, Canadian, Gila, San Juan and Little Colorado are other rivers of more or less importance. The rainfall is light but the soil extremely fertile when irrigated. Great government irrigation dams and canals have been built. The great staked plain here is a treeless, dry, yet grassy elevation of 44,000 square miles, with an elevation of nearly a mile, where in some localities water is almost unobtainable. The state has a considerable supply of timber. Hot springs abound, several being favorite resorts. Placer and quartz gold, silver, iron, copper, lead, mercury and zinc are plentifully distributed. On every side are ruins of ancient cities and canals, traces of a people whose history perished with them. In caves and cliffs are vestiges of ruined homes. The climate is invigorating, the atmosphere pure and clear. Meat and vegetables dry without taint. Here is the ideal home for the consumptive. Scarcely a score of years ago the Pueblos, the Navajos and the Zuni Indians were the principal inhabitants; today Americans are crowding out these native sons of the soil. The state university, college of agriculture and mechanic arts, a school of mines, military institute, three normal schools, 71 high schools and 26 Indian schools maintained by the Federal Government, form, with the elementary schools, an excellent educational system. School attendance is compulsory for children from 7 to 14 years of age. While mining is the chief industry, agriculture is rapidly developing. There were 29,841 farms under cultivation, and the value of farm products was $63,098,000 at the last census. The soil and climate are particularly adapted to the cultivation of all fruits, vegetables and cereals, wherever irrigation is possible. Manufacturing is confined chiefly to flour, minerals and lumber. There are 3,060 miles of steam railroads and 11 miles of electric railways in the State. Santa Fe, the capital, is the oldest city in the United States, having been founded 23 years before St. Augustine, Florida. It is laid out after the manner of Spanish towns. Elevation, 6,840 feet. Albuquerque is the largest and most important city. Clovis, Las Cruces, Las Vegas, East Las Vegas, Raton, Roswell, Santa Rosa, Silver City and Texico are important and growing cities.

NEW YORK—"Empire State."

Motto: Excelsior (Higher). Flower: Rose.
Area: 49,240 square miles. Population, 10,385,227. Per square mile, 217.9.

In 1609 Hendrick Hudson ascended the Hudson River as far as Albany and gave it its name. The country was then occupied by the Mohawk Indians and the Manhattans; the latter living upon the island so called. In 1626 Staten Island and Manhattan were purchased from the Indians, the price paid for Manhattan was twenty-five dollars. The colony on the island was called New Amsterdam. For many years there were quarrels between the Dutch and the English colonists. These culminated in the capture of the Dutch colonies and changing the name from New Amsterdam to New York. Today the state contains about one-tenth of the entire population of the United States. The State took an active part in the Revolution, many famous battles of that struggle being fought on its soil. At the close of the war it became one of the original thirteen States of the Union, ratifying the constitution of 1788. Robt. Fulton made his trial trip on the Hudson River with the first successful steamboat in 1807. Slavery was abolished in the State in 1817. Only a corner of New York rests on the Atlantic, yet it has a sea coast on Staten and Long Island of 264 miles. Its lake coast at the opposite extremity is 352 miles and it has 281 miles of river navigation. It is 310 miles long and 320 miles wide. There is a diversity of soil and climate. There are several mountain ridges and as a whole the State is hilly, with fertile valleys and intersecting plains. In the west the country is less broken than north and east. From New York Bay to Albany, the Hudson River is more of a deep and narrow bay with tides flowing the entire distance, than a river. The distance is 150 miles. On the west side of the river the banks rise to from 200 to 400 feet in what are called in the south portion the Palisades. The St. Lawrence forming the northwestern boundary pours more water into the ocean than any river in the world, except the Amazon. The state barge canal, connecting New York City with Lake Erie at Buffalo, has been completed. It has a minimum depth of twelve feet and a capacity of 20,000,000 tons per season. The Mohawk, remarkable for its falls that have a perpendicular descent of 70 feet, flows 217 miles into the Hudson, the Oswego uniting with the Seneca, the Black, the Genesee with four remarkable falls, and the east branch of the Susquehanna furnish a plentiful supply of water. The Catskill mountains in the eastern part cover 500 square miles and rise to a height of 3,800 feet. The Adirondacks, west of Lake Champlain, have Mt. Marcy as their crown, 5.344 feet high. There are over 1,000 lakes, many of which are famous and exceedingly beautiful. The soil is fertile, forest trees grow mainly along the mountain sides. There are beautiful cascades and waterfalls and numerous islands, many of them well known as resorts, and of great historical interest. The Catskill and Adirondack Mountains are healthful and well patronized resorts. The climate exhibits sharp contrasts, but is generally healthful and invigorating. The present school law is a model of its kind. Children between seven and sixteen years, unless incapacitated, must attend the public schools for the full school year. There are schools for Indians and some separate schools for colored people. Teacher's institutes have been maintained since 1847. Higher educational institutions of learning are extensive. Chief among the wealthy cities is, of course, New York City, now the greatest shipping port of the world, an intelligent description of which would be impossible in so brief an article. It surpasses all other American cities in its costly and magnificent mercantile buildings and private residences, its shipping, its trade and its manufactures. Buffalo, Albany, the captal, Rochester, Syracuse, Troy, Utica, Oswego, Binghamton, Auburn, Amsterdam, Cohoes, Jamestown, Kingston. Mount Vernon, New Rochelle, Newburgh, Niagara Falls, Poughkeepsie, Rome, Watertown, Elmira, Yonkers and Schenectady are large, populous and rich cities and in every part of the State are important manufacturing and commercial cities and towns. The greatest hydro-electric plant in the world is located at Niagara. In agriculture the State ranks high, producing in profusion everything known to its latitude. In the value of manufactured articles it ranks first. There is no coal, but iron. lead and copper are found as well as building stone and marble. Foreign and internal commerce by sea, lake, river and railroad exceed many times that of any other State. One of the first railroads in America, from Albany to Schenectady, 17 miles, was built in 1831. There are 8,722 miles of steam railroads, 8,434 miles of electric roads, including elevated and subway lines, and 193.060 farms, and the value of farm products during the last year reported was 498,179,000.

NORTH CAROLINA—"Old North State."

Motto: Esse quam videri (To be rather than to seem).

Area: 52,426 square miles. Population, 2,559,123; per square mile, 52.5.

The first English settlement in America was founded by Sir Walter Raleigh on Roanoke Island in 1585. No signs of this colony were visible, however, the following year on the arrival of a second expedition and the settlement was abandoned. In 1660 English settlers from Virgiana established themselves there. In 1709 a Swiss colony settled at and founded Newbern. French and German colonies followed. In 1729 the English King purchased the entire tract and it was divided into two provinces, North and South Carolina. In 1769 it declared against England's right to tax the colonies and in 1774 was represented in the first continental congress. 1789 it ratified the Federal Constitution. It seceded in 1861 and was restored to the Union in 1868. It is 520 miles from east to west and 200 miles in greatest breath. What are called coast and swamp lands extend sometimes 100 miles inland and abound in valuable timber; in these are included the turpentine regions. The middle section is fertile, possesses great mineral wealth and abounds in streams, affording fine water power. Beyond this is a high plateau and further west are the Appalachian Mountains; the greatest altitude being 6,711 feet at Mt. Mitchell. These mountain ranges present scenes of great beauty and sublimity, among them are numerous health resorts. The coast line is 400 miles long. In the northeastern part are Albemarle and Pamlico Sounds. The Great Dismal Swamp extends north above Albemarle Sound into Virginia. 3,000.000 acres are covered by swamp lands, much of which have been drained into valuable rice lands. In the east the Cape Fear, the Roanoke, the Neuse, the Tar, Chowan, Yadkin and Catawba flow into the Alantic and in the west are New. Little Tennessee, French Broad, Swannanoa, and the Chattooga rivers. The soil is of every variety; the drained swamps are fertile and the pine regions barren. In the uplands are fine forests of all kinds of valuable timber. Cotton and tobacco are important products. Wild grapes. plums and persimmons grow profusely. There are large deposits of iron and considerable zinc, tin, mica, lead and copper. Diamonds, rubies, garnets and other precious stones have been found. In the elevated parts the climate is exceedingly heathful. School attendance is compulsory, and separate schools are provided for colored children. Besides the common schools, there are 7 normal schools. The state university at Chapel hill and 14 other institutions for higher education. State charitable institutions are well abreast of those of the Sister states of the Union. Wilmington is the metropolis and is the leading seaport. It is one of the greatest markets for naval stores. Raleigh, the capital, is a manufacturing city of importance. Asheville, Charlotte, Durham, center of the tobacco industry, Greensboro and Newbern are important cities. Concord, Elizabeth City, Fayetteville, Goldsboro, Gastonia, High Point, Kinston, Rocky Mount. Winston-Salem, Salisbury, Washington and Wilson are all large places. Agriculture is the leading industry. Nearly all cereals, fruits and vegetables are raised in abundance. Grapes and cranberries are especially plentiful. Herbs are gathered for medicinal purposes. Manufactures are chiefly resin, turpentine, cotton goods, iron and wooden ware The State is noted for production of pitch, tar and resin. At the last census there were 269,740 farms. and the value of farm products $683,168,000. There are 5,615 miles of steam and 314 miles of electric roads.

NORTH DAKOTA—"Flickertail State."

Motto: Liberty and union, now and forever, ane and inseperable.

Flower: Wild Rose.

Area: 70,837 square miles Population 646,872; per square mile 9.1

The Dakotas were named from an Indian confederation. They were part of the Louisiana purchase. In 1834 Lord Selkirk founded a Scotch colony at Pembina which removed into Manitoba a few years later. North Dakota became a seperate State in 1889. The eastern or Red River Valley section is a level prairie and believed to be the best wheat land in the world. West of this region the country is more rolling and rises to a height in Bowman county of 3,500 feet. The Missouri is its chief river and is navigable all the way through the state. It flows through some high plateaus and has many tributaries. The Yellowstone, Cannon Ball, Heart, Knife, Little Missouri and the Dakota or James are among their tributaries. The Red River forms the most of the eastern boundry. There are many fine lakes, most important of which is Devil's Lake, 14x20 miles of salt water. Along the water courses is a considerable growth of timber. The climate is severe in the winter and hot in the summer days, but dry and remarkably healthful. The state is amply provided with elementary and high schools, and higher institutions. There are 14 charitable institutions. Bismarck, the capital, on the Missouri River, Fargo. the commercial metropolis, and a large distributing point for farm machinery, and Grand Forks, are the largest cities. Cando, Casselton, Devils Lake, Dickinson, Grafton, Hillsboro, Jamestown, Langdon, Larimore, Lisbon, Mandan, Marysville, Minot, Pembina, Valley City, Williston, and Wahpeton, are important cities. North Dakota is an agricultural state; its cheif crop being wheat. Oats and barley are largely cultivated. Cattle, sheep and swine are valuable products. The wool clip yeilds about 2,000,000 pounds annually. There are some good lignite coal mines, but few minerals. Flour and grist mills are chief manufacturing industries. There are 77,693 farms, and the value of farm products last report was $270,981,000. There are 5,295 miles of steam and about 27 miles of electric railway.

OHIO—"Buckeye State."

Motto: An empire within an empire.
Flower: Scarlet carnation.

Area: 41,040 square miles. Population, 5,759,394; per square mile, 141.4.

Ohio, named for the river, was explored by Joliet in 1669. Ten years later he visited the northern border. Trading stations were established in 1680 at Maumee City, Sandusky and Cuyahoga. In 1763 it was ceded to England and in 1783 was ceded by England to the United States. First permanent settlement, made by New England veterans of the Revolution, on the Ohio between Muskingum and Hocking rivers. The Western Reserve, of which Conneaut was the capital, was settled by New Englanders. Marietta was founded later by Rufus Putman. In 1787 congress established the territory northwest of the Ohio of which Ohio was a part. In 1802 it was formed into a State with its present boundaries. Ohio has no mountains and has for the most part an undulating surface; the highest elevation is 1,550 feet at Bellefontaine. Greatest length east to west, is 230 miles and greatest breath 205 miles. Kelly's Island and Bass Islands in Lake Erie belong to Ohio. The Ohio River, its southeastern and southern border, separates it from West Virginia and Kentucky. The Muskingum. Scioto, Hocking, Little Beaver, Mahoning, Great and Little Miami, flowing into the Ohio and the Cuyahoga, Vermilion, Ashtabula, Huron, Chagrin, Rocky, Black, Portage, Sandusky and Maumee rivers flow into Lake Erie, which forms the northern boundry and has excellent harbors. The state was formerly covered with forests, considerable areas of which still exist, producing hardwood of many kinds There is coal and iron, quarries of building stone, salt springs, natural gas and oil wells. In the Licking Valley are curious mounds and earth works built by an ancient people. Near Newark they cover an area of over two square miles. Generally speaking, the climate is mild and heathful, the warmer section being in the southwest. Compulsory school age is 6 to 14 years. There is an exceptional number of higher educational institutions. Ohio has furnished the nation with six presidents. Cleveland is the largest city. It has a fine harbor and is a rich commercial and manufacturing center. Cincinnati, on the Ohio, has large packing interests. Columbus, the capital, Toledo. Dayton, Youngstown, Hamilton. Springfield, Sandusky and Akron are all wealthy and populous cities. There is a larger number of rich manufacturing and agricultural cities in Ohio than any other western state. Ashtabula, Canton, East Liverpool, Findlay, Lima, Lorain, Mansfield, Marion, Newark, Portsmouth, Steubenville and Zanesville are all important cities and towns. As an agricultural state Ohio ranks high. It is noted for an excellent quality of winter wheat; all cereals are cultivated and it produces large crops of hay, potatoes, etc. Apples grow abundantly. Horses, cattle, sheep and hogs are very extensively raised. There is a large wool product. The number of farms last reported was 256,699. The total value of all farm products raised was $567,643,000. Ohio is one of the best fruit states, especially for apples and grapes. Its manufacturing interests are larger than any other State west of New York. It produces pig iron extensively and there are iron and rolling mills, flour mills, manufactories for woolen goods, agricultural machinery, automobiles and accessories. The lake commerce adds largely to the State's revenues. There are 9,665 miles of steam, and 4,223 miles of electric roads.

OKLAHOMA.

Motto: Labor omnia vincit (Labor conquers all things).
Flower: Mistletoe.

Area: 70,057 square miles. Population, 2,028,283; per square mile, 29.2.

Oklahoma is Indian for "Beautiful Land." With Indian Territory it was ceded by Texas in 1850 and was a part of the Louisiana Purchase. It was originally known as the Indian country. In 1889 a large portion of this land was opened up for settlement and there was a rush made by as many as 50,000 emigrants for homes there. Oklahoma developed so rapidly thereafter that it was made a State in 1907. The greater part of the State is a rolling prairie and is very fertile. Except in the far western part it is well watered. In the south the Wichita Mountains have some considerable elevations. The Arkansas, Verdigris, Neosho, Illinois. Canadian, Cimarron, Washita, and Kiamachi are its principal rivers. The Red River forms its southern boundary and is navigable the greater part of the year. Soil of the river bottoms is very rich. All kinds of fruit trees and small fruits are grown in abundance as well as corn, cotton, rice, wheat, rye and potatoes. The walnut and pecan trees are very productive and there are oak, ash, elm, sycamore and cottonwood. The increasing production of petroleum makes it an important mineral state. Other minerals are coal, natural gas, iron, copper, zinc, building stone and salt. The climate is mild and generally healthful, the winters are short. It has a good school system, and separate schools for white and colored children. There is a school for the deaf and one for the blind. Oklahoma City, the capital, is the largest city in the State. Tulsa, Muskogee, Guthrie, Shawnee, Durant Elreno, Lawton, McAlester, Chicasha, Okmulgee and Sapulpa are other important cities. The state is mainly agricultural. There are some manufactures, such as cotton ginning, flour and grist mills, cotton seed oil, etc., and there is considerable mineral output. Lead and zinc mines are freely worked. There are 191,731 farms and the value of all farm products last reported was $522.-565,000. There are 6,559 miles of steam and 331 miles of electric railways.

OREGON—"Beaver State."

Motto. The Union. Flower: Oregon grape.

Area: 96,699 square miles. Population, 783,389; per square mile, 8.1.

Oregon was named for the Oregon River (now Columbia). It was discovered by Spanish navigators in the 16th century. The region was explored by the Lewis and Clark expedition in 1804-1805. Astoria was founded in 1811. It was given a Territorial government in 1848, and was admitted into the Union as a State in 1859. It has an extreme length, east to west, of about 375 miles and a width north and south of 290. By the Coast Range, Cascade and Blue Mountains traversing north to south, it is divided into several regions. The Columdia River, forming for the most part its northern boundary, receives most of the waters of the State. It is noted for numerour cascades, canons, narrows and rapids. The Columbia, Powder, Burnt, Malheur, Deschutes, John Days, Umatilla, Walla Walla, Willamette, Clackamas, Tualatin, Yamhill, Santiam, Luckiamute. Calapooya, Mary and Long Tom and the Rogue and Umpqua are the principal rivers and tributaries. There are many large lakes, most of which are in the south central portion. Waterpower developments at Oregon City and elsewhere are of great value. Crater Lake is one of the most beautiful lakes in the world. The State has a coast line of 300 miles. In the mountain region and along its rivers are scenes of grandeur and great beauty. Its dales, cascades, falls, canons and snowclad peaks are noted everywhere. Mt Hood is 11,225 feet high. There are extinct volcanos and glaciers. Many areas are densely wooded with giant trees and choice kinds. Gold and silver are found at many places. Copper, iron, coal, granite, marble and slate are abundant. The climate is mild and very invigorating. Except in the mountains, snow remains only a short time, and there is no excessively hot weather in summer. The eastern half is dry but irrigation supplies the place of rain. Portland is the largest city. Salem is the capital. Astoria is a port of entry. Albany, Ashland Corvallis, Grants Pass, La Grand, Medford, Roseburg, The Dalles, Klamath Falls and many other rich and rapidly growing cities are worthy of note. There is an excellent public school system, attendance being compulsory of all children between 9 and 15 years. The state university at Eugene and agricultural college at Corvallis are notable institutions. The forest reserves comprise timberland of over 15,000,000 acres. Leading crops are wheat and hay; oats, barley and flax are raised. Potatoes, sugar beets and hops are important crops. Apples, plums, cherries and grapes are extensively raised and exported. Live stock industry is very valuable. Salmon, sturgeon, halibut, brook trout and oyster fisheries are a source of wealth. Total mineral output is over $3,500.000 annually. Manufacturing interests are increasing; chief among them is the production of lumber and flour, canning, slaughtering and dairy products. Total value of farm crops a year was $139,060,000; number of farms, 50,188. There are 3,404 miles of steam and 722 miles of electric road.

PENNSYLVANIA—"Keystone State."

Motto: Virtue, liberty and independence.

Flower: Daisy and violet.

Area: 45,125 square miles. Population, 8,720,017; per square mile, 194.5.

Pennsylvania, meaning Penn's Woods, was bought by Wm. Penn from the English King in 1681. Proprietary government was abolished at the time of the Declaration of Independence and an independent constitution adopted. Lancaster became the capital in 1799, and Harrisburg in 1812. The first Continental Congress was held in Philadelphia. Pennsylvania is the seventh State in the Union, becoming a member on December 12, 1787. The surface is diversified; rolling plains in the west, picturesque mountains in the northwest and center and low levels in the southeast. Greatest length east and west 300 miles; width 180 miles. Blue Knob is the greatest elevation. 3,136 feet. Pennsylvania is the only state which produces anthracite coal. The Susquehanna and Delaware are the principal rivers. The Lackawanna, Lehigh, Schuylkill, Juaniata, Allegheny, Conemaugh. Monongahela, Youghiogheny and the Ohio are important streams. Nearly all break through mountain gaps. In the production of minerals the State stands probably first in the Union. It produces vast supplies of oil, and is famed for gas wells and mineral springs. In climate there is a variety of temperature. In the west and north the winters are long and often cold and in the east it is warm, the summers often extending into October. Attendance at the public schools is compulsory upon children from 8 to 16 years. The state has many universities, colleges for men and women, technical and scientific schools, and 15 normal schools. Philadelphia is the most important city and is third in the United States. The chief U. S. mint, is located here and there are many historic buildings, such as Independence Hall, etc. It is the port of Pennsylvania. Pittsburgh is the center of large iron and coal deposits, and has large iron and steel mills and large manufacturing interests. Iron, steel, coal and glass are its chief products. Harrisburg. the capital, Scranton, Erie, Wilkes-Barre, Altoona, Johnstown, Williamsport, Reading, Lancaster, Chester, York, Allentown and Bethlehem are large and rich cities. There are many others doing a commercial and manufacturing business. Pennsylvania ranks second in wealth, in population and in manufactures, and first in the production of iron and steel. The output of anthracite coal is over 88,000,000 tons annually. The State is noted for the thrift of its farmers and the extent and variety of its cereal. fruit and vegetable crops, as well as its cattle and dairy farming. Its wool clip for 1919 was 5,013,000 pounds. There is a forestry department which purchases and manages lands suitable for timber culture. There are large quarries, cement works, brick and tile works, granite and slate. The output of steel mills, blast furnaces and foundries is enormous. The manufactures amount to $2,832.250,000 a year at last census report. There are 202,256 farms. and the value of farm products last reported was $467,351,000. There are 12,476 miles of steam and 4.346 miles of electric roads.

RHODE ISLAND—"Little Rhody."

Motto: Hope. Flower: Violet.

Area: 1,248 square miles. Population, 604,397; per squars mile, 566.4.

Rhode Island was named from the island in Narragansett Bay. Earliest settlers were colonists from Massachusetts. First settlement was in 1636. In 1663 a charter was granted incorporating the colony of Rhode Island and Providence Plantations. In 1770 the Federal Constitution was adopted and Rhode Island became one of the original thirteen States of the Union, May 29, 1790. It is 50 miles north to south and varies in width from 22 to 40 miles. It has a water frontage of 350 miles. The surface is broken and hilly, though along the coast there is some marsh and cedar swamp. The islands and capes are very fertile. Narragansett Bay extends into the State 28 miles. The Pawtucket, Pawtuxet and the Pawcatuck rivers all flow into the bay. The State produces coal, granite, building stone, iron ores, some copper and slate. The climate is mild. Like all New England states the public school system is of a high order. There are high schools and a state normal and institutions of higher education. There are among charitable institutions a school for the deaf, a state home for children, a hospital for the insane. and a sanitarium for consumptives. There are 37 benevolent institutions provided by private and religious associations. Rhode Island is preeminently a manufacturing state, its output of manufactured goods at last report was $279,546,000 in annual value. Rubber and elastic goods are important industries, likewise foundry and machine work and dyeing. There are large deposits of graphite and lime. Providence is the capital and the largest city; is the center of commerce and manufacturing. Pawtucket is the site of the first cotton mill in the United States. Newport is a magnificent resort, summer and winter, a port of entry and an important naval base. Central Falls, Bristol, Coventry, Burrillville, Cranston, Cumberland, East Providence, Lincoln, Warren, Johnston, Warwick, Westerly, and Woonsocket, are all important cities, nearly all doing a manufacturing business. There are 4,084 farms, and the value of farm products at last reports was $8,660,000. There are 211 miles of steam railway and 437 miles of electric railway.

SOUTH CAROLINA—"Palmetto State."

Motto: Animis opibusque parati (Ready in soul and resource) and Dum spiro, spero (While I breathe I hope).

Area: 30,989 square miles. Population, 1,683,724; per square mile, 55.2.

South Carolina was named in honor of Charles the Second, of England. Was first settled by French Huguenots in 1562. In 1670 a few colonists located at Port Royal. It became one of the original States in 1788. It was the first State to secede in 1860, and was restored to the Union in 1868. Along the coast, the surface is level and in some places marshy. Interior section is undulating, and the northwestern is traversed by the Blue Ridge Mountains, where the highest peak, Ridge Mountain, rises to 3,659 feet. Greatest length east to west is about 235 miles, and greater width 215 miles. Much of the soil is fertile; there is, however, much that is sandy and unproductive. There are fine harbors at Charleston and Port Royal. The islands along the coast are famous for the sea island cotton. The Savannah River forms the southwest and west boundary. The Saluda, Broad, Congaree, Wateree, Santee, Great Pedee, Little Pedee, Blackburn, Cooper, Ashley, Ashpoo, and Combahee are the principal rivers. There are forests of valuable timber and springs of medical value. Glenn, Limestone and Cedar Springs are noted. In the lowlands the climate is not inviting, but in the central and western regions it is mild and salubrious. There is a State Board of Education. School attendance is not compulsory but there are restrictions on the employment of illiterate children in mines and factories; separate schools for white and colored. There are public high schools, public and private normal schools for the training of teachers. There is a hospital for the insane and an asylum for the deaf, dumb and blind. There are several orphanages, hospitals and homes for adults maintained by private charity. Charleston, founded in 1677, is the largest city. It is one of the largest seaports on the South Atlantic Coast. There are two channels. the deepest being defended by Forts Sumter, Pickens and Moultrie. Fort Sumter fired the first gun of the Civil War. Columbia, the capital, is at the head of navigation on the Congaree River, Greenville, Abbeville, Aiken, Anderson, Camden, Chester, Clinton, Darlington, Gaffney, Florence, Greenwood, Georgetown. Laurens, Marion, Newberry, Orangeburg. Rock Hill, Spartanburg, Sumter and Union are other important cities. South Carolina produces more rice than any other state; its sea island cotton is superior to all others; nearly all cereals, potatoes and tobacco are extensively raised. Fruits, some of them semi-tropical, are valuable products. More than half the State is woodland. Oysters, shad and sea bass fishing are very productive. Cotton and tobacco are of great importance. The mining of phosphate rock, granite and clay are valuable industries. Gold is produced, and some silver; manganese, iron ore, etc., are found. The output of cotton goods is about $75,000,000 yearly. There are also flour and grist mills and tobacco factories. The State has 3,850 miles of steam and 146 miles of electric railways. At the last census there were 192,664 farms. and the value of all farm products for that year was $520,522,000.

SOUTH DAKOTA—"Sunshine State."

Motto: Under God the people rule. Flower: Anemone patens.

Area: 77,615 square miles. Population, 636,547; per square mile, 8.2.

South Dakota was separated from North Dakota and made a State by Act of Congress in 1889. It is known as the 40th State. Its greatest length is 380 miles and greatest width 245 miles. It is for the most part a rolling, well-watered prairie. The Black Hills in the southwestern section have a considerable elevation and are extremely rugged. The highest point is Harney Peak, 7,242 feet above the sea level. In these hills are tracts of pine and other valuable timber. There are, also, rich silver and gold mines. West of the Missouri River are many isolated buttes from 500 to 1,500 feet high. The Missouri is the largest river and divides the State in two nearly equal parts. The Cheyenne, Grand. Moreau, White, James or Dakota, Vermillion and the Big Sioux are other important rivers. The Big Stone and Traverse are the largest lakes. All its waters are well stocked with fish. The ores of the Black Hills are of great variety and are seemingly inexhaustible. The tin deposits are said to be among the best in the country. There is coal as well as natural gas. The climate is dry and healthful. Spring opens early. Public education is free to all between the ages of six and twenty-one, and is compulsory as to children between eight and fourteen. There are elementary and secondary schools, normal schools and a school of mines. Agriculture is most important of all industries. Wheat, at last reports, yielded 30,175,000 bushels; corn, 91,200,000; oats, 38,400,000; and barley, 19,250,000 bushels. Hay, flax, fruits, potatoes, dairy products and poultry are valuable industries. Cattle, horses, sheep, hogs and mules are largely raised. The wool clip amounts to about 5,222,000 lbs. annually. About 100,000 acres are under irrigation. About $5,000,000 worth of gold and $137,000 worth of silver are produced each year. The total mineral output is about $6,000,000. Manufacturing interests consist chiefly of flour and grist mills, dairy work, lumber and mining. There are 4,284 miles of steam and 26 miles of electric roads. There are 74,564 farms and the value of farm products amounts to $321,292,000. Deadwood, Sioux Falls, Aberdeen, Madison, Redfield, Mitchell, Rapid City, Watertown, Yankton, Pierre, the capital, Lead and Huron are among the largest cities.

TENNESSEE—"Big Bend State."

Motto: Agriculture, commerce.
Flower: Goldenrod.

Area: 42,022 square miles. Population, 2,337,885; per square mile, 56.1.

In 1776 this State was known as the "District of Washington." From 1785 to 1788 is was maintained as the "State of Franklin", In 1794 it became a separate Territory and in 1796 it was admitted as a State in the Union. It seceded in 1861 and was restored in 1868. It is 430 miles east and west and 120 miles wide. It is separated from North Carolina by the Appalachian Mountains, which have a local name here of Smoky mountains. The highest peak is Mount Guyot, 6,636 feet. East Tennessee is one of the most beautiful and healthful regions in the country. Middle Tennessee is a wide, fertile plain with minor ridges, and West Tennessee is a rolling plain, ending in bluffs along the Mississippi River. The Tennessee and the Cumberland are the most important rivers though the State is well watered with numerous streams, and is well supplied with excellent water power. The State is noted for its fine scenery, medical and other springs, caves, varied minerals and coal deposits. The winters are mild and summers not extreme. Separate schools for whites and colored. In some counties school attendance is compulsory, and the employment of children under fourteen in factory or mines is illegal. The State is well supplied with higher educational institutions. Nashville, the capital, is the seat of Vanderbilt University Memphis is a port of entry and a large cotton market. Knoxville is an important commercial center and Chattanooga has blast furnaces, rolling mills and iron foundries There are many beautiful and important cities in the State The mild climate permits the growth of nearly every kind of agricultural product, all kinds of cereals, fruits, peanuts, tobacco and cotton. There are forest products. from 27,300 square miles of woodland. Stock and dairy products are important. There are annually raised about 353,000 horses, 278,000 mules, 858,000 cattle and cows, 674,000 sheep and 1,946,000 swine. The coal output is valued at $6,009,150, pig iron at $4,000,000, and copper at $630,000 yearly. The entire mineral product amounts each year to about $22,000,000. There are 252,691 farms and the value of all farm products last reported was $355,912,000. There are 4,173 miles of steam and 467 miles of electric railways.

TEXAS—"Lone Star State."

Motto: Texas—one and indivisible.
Flower: Bluebonnet.

Area: 265,896 square miles. Population, 4,663,228; per square mile, 17.8.

Texas declared its Independence of Mexico in 1836, and was an Independent Republic until 1845 when, through the efforts of Houston, its president, it was annexed to the United States and became in that year a State in the Union. Mexico had never acknowledged its independence and the Mexican war resulted. The war terminated with the taking of the City of Mexico by the Americans. The State seceded in 1861 and was restored in 1870. In territorial area it stands first among the States. Northwest to southeast its greatest length is about 760 miles, and east to west about 620 miles. It is 242 times as large as Rhode Island. It is a fourth larger than the old German Empire and twice the size of the United Kingdom of England, Wales. Scotland and Ireland. If its population were as dense as that of Rhode Island it would contain 150,000,000 people. The eastern part has much sandy forest land; central Texas is generally prairie, fairly timbered along the streams; in the northwest there are large tracts where the water is not drinkable, being charged with salt and lime salts. Along the coast the surface is low, and along the Rio Grande are many sections with scant woods. The highest regions lie between the Pecos and Rio Grande Rivers. El Capitan, 9,020 feet high, is the greatest altitude. East of the 100th meridian it is well watered. The Sabine River forms a part of the Louisiana boundary, the Neches, Trinity. navigable over 300 miles, Brazos, Colorado, Gaudaloupe, Nueces, Pecos, Canadian and Red Rivers are chief among the streams that water the State. In the east are pine forests and along the water courses are hardwood groves and many pecan trees, coal is plentifully distributed and there is an abundance of oil, besides lead, copper, silver, bismuth and building stone. In a State so large there must necessarily be a great diversity of climate. In the north and northwest there is often snow and ice, while in the south frosts are unknown. Varying from the temperate to the semi-tropical, the climate is generally healthful. In the lowlands along the coast, there is malaria. Texas has liberally endowed her public school system by means of land grants. There are three separate schools for whites and colored. There are three normal schools and many higher institutions. It is illegal to employ in factories children under 14. Stock raising is an important industry. At last reports there were over 5,596,000 cattle and milk cows, 2,790,000 sheep, and 2,356,000 swine. The wool clip amounted to 14,986.000 pounds. There were in the same year 1,199,000 horses and 784,000 mules. The chief agricultural crops are wheat, oats, rice, cotton, potatoes, tobacco, corn, sugar, vegetables and fruit. Wild fruits, grapes particu- farms, and the value of farm products was $1,076,163,000. The total annual value of different manufactured products, consisting of flour and grist mill, cotton seed oil and cake, lumber, slaughtering and packing, railway cars, oil refining, foundry and machine, rice cleaning saddlery, cotton manufactures, etc., is over $361,279,000. There is a large export trade passing through the port of Galveston, which is the chief port of entry. Austin, the capital, contains mills, foundries and factories. Houston, named after the former president of the Republic, is an important railway center San Antonio has a large and growing trade and is the oldest Spanish town in the State. Dallas is a large manufacturing center; Fort Worth has extensive agricultural and manufacturing interests. El Paso is an important wholesale and industrial city also the largest city on the Mexican border. Beaumont has large oil interests. Wichita Falls is an important business center. Del Rio has developed into an important city since 1910, when it was practically unknown. Waco possesses artesian wells with curative properties. There are many other important cities of over 10,000 population. There are 16,714 miles of steam and 989 miles of electric railway.

UTAH.

Motto: Industry and Independence.
Flower: Sego Lily.

Area: 84,990 square miles. Population, 449,339; per square mile, 5.5.

Utah was obtained from Mexico by the Treaty of 1846 It was settled by the Mormons in 1848. In 1850 it was made a Territory, with Brigham Young as governor. For many years there was constant conflict between the Mormons and the National Government. The Mountain Meadow massacre occured in 1857. In 1896 Utah was larly. are abundant. At the last cenus there were 435,666 admitted into the Union. The Wasatch Mounitains cross the State from northeast to southwest. Many of the peaks rise above the snow line. Kings peak is the highest point, 13,498 feet. In the west is a plateau known as the Great Desert, from which no streams reach the ocean.

The Colorado is the principal river and its main tributaries are the San Juan, Fremont, Grand and Green. For the most part the other rivers in the State are lost in sands or lakes. Utah Lake has comparatively pure water. It is 4.505 feet above the sea, is 24 miles long and 14 miles wide; the river Jordan connects it with Great Salt Lake, which is about 90 miles long and from 20 to 35 wide; its waters are so salty that fish do not live in it. There are a number of other lakes some of fresh and others of salt water. The climate is generally healthful; some tropical plants grow in the valleys. Bigamy was abolished by the Edmonds law. About 75 per cent of the people are of the Mormon faith. There is a good public school system, introduced in 1890. School attendance for 20 weeks annually is compulsory for all children between the ages of eight and sixteen years. There is a State normal school and other higher institutions. A little more than one-half of the land in the State has been taken up. There are about 25,664 farms, and the value of the farm crops totals $48,476,000. Every kind of cereal is produced as well as large crops of potatoes, hay, sugar-beet, vegetables and fruits. Horses, cattle. sheep and swine are abundant. The wool clip is about 15,800,000 pounds yearly. There are valuable mines, chiefly of gold, silver, copper and coal. The yearly output of gold is about $2,000,000. and of silver over $13,345,000. Other minerals are quicksilver, zinc, sulphur, manganese ores, gypsum, petroleum and salt. The total value of mineral products is about $54,000,000 annually. Smelting and refining of copper. flour and grist milling, dairy productions, fruit canning and shoe manufacturing are important industries. Salt Lake City, the capital, is the most important commercial city between Denver and the Pacific coast, and contains the famous Mormon Tabernacle, seating 8,000 people; is also an important manufacturing and railroad center. Other large places are Brigham, Eureka, Logan, Murray, Ogden, Park City, Provo, Spanish Fork and Springville. There are 2,222 miles of steam and 448 miles of electric railways.

VERMONT—"Green Mountain State."

Motto: Freedom and unity. Flower: Red clover.

Area: 9,564 square miles. Population, 352,428: per square mile, 38.6.

Vermont's name is derived from two French words, meaning Green Mountains. The state was first settled by the French near the present site of Brattleboro, and was ceded to Great Britain in 1763. Vermont was the second State admitted into the Union (1791), by the original 13 states, Kentucky being the first. It is 155 miles long and from 38 to 90 miles wide. The Green Mountains extend its entire length and contain peaks with high elevations, the highest being Mt. Mansfield, 4,364 feet. They are covered with evergreen, pine. fir and hemlock. None of the rivers is of any considerable size but they furnish valuable water power. Lake Champlain and Lake Memphremagog are among its numerous lakes. The former is noted for historic association. Its shores are lined with attractive summer resorts. Snow covers the ground nearly all of the winters, which are long and cold. The State is noted for the extreme healthfulness of its climate. Public schools are supported by direct taxation. Education is compulsory. No child under 16 who has not completed a nine-year schooling can be employed in any kind of labor or as a messenger. There are primary and secondary schools as well as normal and higher institutions. Though mountainous, agriculture is, nevertheless, the most important industry. Hay and cereals are extensively raised, as well as potatoes, tobacco, maple sugar, and apples. Vermont apples are of notedly excellent quality. Cattle raising and dairy products are profitable sources of revenue. Sheep and swine are extensively raised. The wool clip produces $200,000 yearly. The forests of the State provide material for a large timber and lumber trade, and supply many wood pulp factories. There are 29,072 farms, and the total value of farm products totals $63,318,000. Flour milling, foundry and machine shop work and the manufacture of hosiery and other woolen goods are important industries. About one-half of the marble used in the United States is produced in the quarries of this State. The annual output of marble and stone is about $12,395,000. The capital, Montpelier, is surrounded by a hilly country, which is fertile and highly cultivated. Other cities are Barre, Burlington, Rutland, Bellows Falls, Bennington, Brattleboro, Hartford, St. Albans, St. Johnsbury, Springfield and Winooski. There are 1,081 miles of steam and 102 miles of electric railways.

VIRGINIA—"The Old Dominion."

Motto: Sic semper tyrannis (Thus ever to tyrants).

Area: 42,627 square miles. Population, 2,309,187; per square mile, 57.4.

Virginia was named for Elizabeth "Virgin Queen" of England. Jamestown was the site of the first English settlement in America (1607). The Federal Constitution was adopted in 1788. Richmond became the capital in 1779. The State seceded in 1861, and became a battle ground for some of the bloodiest battles of the Civil War. It was restored to the Union in 1870. It is low and level in the east and along the coast, hilly in the interior and mountainous in the north. East to west its greatest length is about 425 miles and its width 205 miles. The Blue Ridge Mountains extend from northeast to southwest. The valleys are very fertile, some of them being especially noted. Cheasapeake Bay receives the waters of the State. The Potomac forms the northeastern boundary. The Blue Ridge and the Alleghenies are the chief mountain ranges. Mt. Rogers (5,719 feet) is the highest elevation. The Natural Bridge and the Luray Caverns in the Shenandoah region, are wonders of nature that attract many tourists. In the interior and in the south and west, the climate is very healthful. The schools are liberally supported; separate schools are maintained for white and colored children. No child under twelve may be employed in any mine or factory. Richmond, the capital, Norfolk, Petersburg, Roanoke, Newport News, Lynchburg, Portsmouth and Danville are all important manufacturing and commercial cities. Alexandria, Buena Vista, Clifton Forge, Covington, Charlottesville, Fredericksburg, Manchester, Staunton, Suffolk and Winchester are also wealthy cities, all doing more or less manufacturing. The tobacco crop for the last year reported was valued at $62,141,000. Nearly all cereals, cotton, hay and potatoes, as well as fruits and vegetables, are valuable crops, with a total crop value for last year of $341,052,000. The number of farms in the State is 186,011. Last year 9,187,328 tons of coal was produced, and there are granite, building stone, soapstone, pig iron and other mineral products. The total yearly output of mineral products is quite extensive, including iron ore. The State has extensive cotton mills, manufacturing establishments, flour mills, iron foundries and iron and steel manufacturing plants, factories for textile goods, lumber, leather, etc., the yearly value of whose output is nearly $180,000,000. There are 4,804 miles of steam and 443 miles of electric railways.

WASHINGTON—"Evergreen State."

Flower: Rhododendron.

Area: 69,127 square miles. Population, 1,356,316; per square mile, 20.3.

Washington, named for the "Father of His Country," was organized as a Territory in 1853 and was admitted as a State in 1889. It is the extreme northwestern State, about 340 miles greatest length and 230 miles in width. On the northwest the strait of Juan de Fuca, a wide arm of the sea, deep and broad enough to float the commerce and navies of the world, forms a direct connection between the Pacific and Puget Sound, an inland sea wholly within the State, and famed for the extent of its coast line. the depth, number and excellence of its harbors, safety of navigation and beauty of its scenery. The Cascade Range divides the State into two distinct sections. The greatest elevation is at Mt. Ranier or Tacoma, 14,408 feet. Forests of fir, spruce, cedar and pine cover the sides of these mountains. Above there are some glaciers and perpetual snow. Some of the peaks were formerly volcanoes. Western Washington is densely timbered. There are some fertile plateaus and much rough lands. The eastern section has several broad plains but is more or less broken in its surface. In this section irrigation is generally required. Puget Sound receives the waters from all the northwestern part of the State. Water power may be abundantly obtained in this section. The Columbia River forms part of the southern boundry of the State, and is navigable for a great part of its length. It is noted for its salmon fisheries. The climate is exceedingly healthful and inviting. In the western part, except on the mountains, there is little snow or ice in the winter, and the summers are cool. There is always a breeze from the sea. The eastern section is colder in winter and warmer in summer, but very healthful. Education is compulsory for children from 8 to 16 years. There are elementary and high schools. Higher educational institutions are well attended. Agriculture is an important industry. The naturally arid eastern section has been made fertile and productive by systems of irrigation, which are being increased and perfected each year. The fruit growing interests are of increasing importance. Apples, as well as many other fruits, are exported to the middle and eastern States. Horses, cattle, sheep and swine are extensively raised. The wool clip is about 3.450,000 pounds yearly. There are 66,288 farms, and the total value of all farm products amounts to $196,461,000. The timber wealth is immense. The forest reserves have altogether an area of 18,218 square miles. The total timber area is about 34,000 square miles. There are hardwood trees as well as fir, cedar and spruce. Nearly 1,000,000,000 feet are shipped by sea yearly. All the lakes, rivers and coast waters provide lucrative fisheries. Salmon are very abundant. There is halibut, herring, cod, shad, and many other species as well as shell fish in abundance. The value of the fish canning industry is more than $10,000,000 annually. There is nearly 4,000,000 tons of coal mined, $1,400,000 worth of marble and stone quarried, and there is iron ore, lead, and zinc, as well as other minerals, besides some gold and silver. The lumber production is very large, also products of flour and grist mills. Olympia, the capital, is situated at the head of Puget Sound. Seattle, the largest city, has large manufacturing and commercial interests, and is one of the country's greatest shipping ports, with direct connections with Alaska and the Orient. Tacoma has one of the best harbors on the Sound and is the center of valuable mining, agricultural and manufacturing interests. Spokane is a very important and wealthy city in the eastern part of the state. Walla Walla, Aberdeen, Bellingham, Centralia, Hoquiam, Everett and Yakima are very large, wealthy and rapidly growing cities. There are very many other cities well worthy of special mention. There are 6,292 miles of steam and 1,084 miles of electric railways.

WEST VIRGINIA—"The Panhandle."

Motto: Montani semper liberi (Mountaineers are always free).

Flower: Rhododendron.

Area: 24,170 square miles. Population, 1,463,610; per square mile, 60.9.

West Virginia was a part of Virginia until the period of secession in 1861. After Virginia had passed the ordinance of secession, forty of the western counties in convention repudiated the acts of the State Convention and ratified an ordinance for the formation of a new State. This State was admitted into the Union in 1862 under the name of West Virginia. For the most part it is hilly, often mountainous. The outline is very irregular. The Appalachian Mountains, which traverse it in parallel ridges, are often fertile to the top and well wooded. Spruce Knob (4,860 feet) is the greatest elevation. A large part of the state is covered with valuable forests. Coal and iron ore are here in vast deposits, as well as many other minerals, such as marble, building stone, clay, etc. The climate is very healthful, not subject to great changes; fifty degrees is about the mean annual temperature. The constitution prohibits the education of white and colored in the same school. Twenty weeks attendance at school of all children between eight and fourteen years annually, is compulsory. Besides the elementary schools there are high schools, normal schools, colleges and state Universities. For the most part the farm land is fertile, and agriculture is an important industry. Five million bushels of wheat and 25,000,000 of corn are average annual yealds. Hay, oats, potatoes and all kinds of fruits are raised in great abundance. Farm animal industry is very valuable. West Virginia produces fine breeds of horses, mules and cattle , as well as large numbers of sheep and swine. The wool clip approximates $800,000 yearly. Seventy-three per cent. of the State is covered with timber. and the lumber interests are very valuable. A large area of soil has not as yet been brought under cultivation, and yet there are 87,289 farms, and the value of all farm produce totals $152,071,000. There are extensive mining and quarrying industries; more than 51,000 men are employed in coal mines. Seventy-two million dollars' worth of coal are taken out of the mines each year, twenty-nine million dollars' worth of petroleum, and thirty-four million dollars' worth of natural gas are produced each year. There are iron mines and blast furnaces. There are building stone, salt and manufacturing clay. Clay industries bring a revenue of nearly $6,000,000 annually. Leather industries are not least in importance. The value of all manufactured articles is about $193.000,000 each year. Wheeling is the largest city and is a port on the Ohio River; the center of very large manufacturing and mining interests. Charleston, the capital, Huntington, Parkersburg, Clarksburg, Fairmount, Bluefields, Chester, Elkins, Martinsburg, Benwood, Grafton, Harpers Ferry, Hinton, Keyser, Morgantown, Moundsville, Princeton, Richwood, Sistersville, Wellsburg and Williamson are other wealthy cities, with large mining, manufacturing or agricultural interests. There are in the State 4,007 miles of steam and 660 miles of electric railways.

WISCONSIN—"Badger State."

Motto: Forward. Flower: Violet.

Area: 56,066 square miles. Population, 2,632,067; per square mile, 47.6.

Wisconsin was organized as a separate Territory in 1836 and was admitted into the Union as a State in 1848. From north to south its greatest length is 300 miles and its greatest width is 290 miles. Along the borders of rivers and lakes are cliffs and rolling hills, from a few hundred to 1,940 feet high, the latter height being that of Rib Hill, Marathon County, and in the southwest are mound elevations, the Blue Mound in Dane County being upwards of 1,250 feet. Except these not very great elevations, the State has generally a rolling surface, with rich soil and good drainage. It is the leading dairy State of the Union, due to its excellent grass lands. The State is well supplied with navigable rivers, many of which furnish fine water-power for lumber and paper mills and light. railway and manufacturing purposes. Wisconsin has a very healthful climate. The pine forests of St. Croix Valley and many other localities are resorts for consumptives. The hundreds of lakes in the northern part of the State are making that region the Adirondacks of the middle west. The public school system is of a very high order. Elementary education is compulsory for all children between 7 and 14 years in cities for the entire year, and for towns and villages six months of the year. There are nine normal schools and many noted institutions for higher education. The leading industry is agriculture. At last reports there were 189,196 farms, and the total farm products for the year was valued at $433,039,000. Potatoes about 28,000,000 bushels. Hay is an important product. Wheat, corn, oats, rye, sugar beets and other crops grow abundantly. Cattle. horses, mules, sheep and swine add largely to the yearly revenue. The last wool clip reported amounted to 3,306,000 pounds. Lumber is a leading manufacturing industry. Leather, foundry and machine shop products, flour mill products; add largely to the State's wealth. Milwaukee is the largest city. It is a large grain market, has large mercantile and manufacturing interests, and ranks high in the social wealth of its people. Madison is the capital, and has splendid educational institutions, including the State University. It is beautifully located between Lakes Mendota and Monona. Oshkosh has lumbering and manufacturing interest of great value. Racine is an enterprising city, second in size in the State. La Crosse has flouring mill and lumbering interests and many manufacturing establishments. Sheboygan, Green Bay, Appleton, Ashland, Superior, Eau Claire, Fond du Lac, Janesville, Kenosha, Marinette and Wausau are large and prosperous cities. Some of them are noted resorts. Many of the towns in central Wisconsin have large lumber interests. There are 7,736 miles of steam and 700 miles of electric railways in the State. Its extensive frontage on Lake Michigan and the Mississippi River gives it abundant cheap transportation.

WYOMING.

Motto: Equal rights. Flower: Blue fringed Gentian.

Area: 97.914 square miles. Population: 194,402; per square mile: 2.

Wyoming's first agricultural settlers were Mormons. A Territory was formed in 1868. The first Territorial Legislature, which convened at Cheyenne in 1869, gave women the right to vote. Wyoming was admitted into the Union in 1890. It is about 365 miles from east to west and 275 miles north to south. For the most part it is a plateau and mountain region, from 2,500 to 5,000 feet above the sea. Gannett Peak, 13,785 feet, is the highest elevation. The main chain of the Rockies extends across the State from northwest to southeast. It is the site of the divide between the waters of the Pacific and the Gulf of Mexico. The head waters of the Columbia, Colorado and Missouri rise in the Wind River Mountains. Women may act on juries and are eligible to public office. Education is compulsory. There are elementary and high schools, universities and colleges. Wyoming is naturally arid for the most part, but many extensive irrigation and development companies are rapidly bringing agriculture to the front. There are 15,611 farms; crops for 1920, $56,237,000. Half of the State is well adapted to stock raising. Horses, cattle, sheep and swine are extensively raised. The yearly wool clip amounts to 33,415,000 pounds. Ten million acres are covered with timber. The output of coal is 8,427,400 tons, copper is mined, and there is some gold and silver found, besides valuable quarries of building stone and gypsum, from which plaster of paris is made. Manufactures consist of cars, made and repaired, railroad ties, lumber products, flour and dairy products. The fish hatcheries keep the streams well stocked with trout and other fish. There are 1,929 miles of steam railways and 22 miles of electric railways. Stage route transportation is still common. Cheyenne is the capital, and coal and iron are found near here. It is one of the chief cattle centers of the west. Other important and growing towns are Laramie, Rawlins, Rock Springs and Sheridan. The most interesting region of Wyoming is the Yellowstone National Park, nearly all of which lies in the State. No part of this wonderful tract is less than 6,387 feet above the sea level and the snow covered mountains rise to a height of over 13,000 feet. It was established as a National Park in 1872. It contains many geysers, thousands of hot springs many waterfalls, lakes, canons and numerous mountains of petrifactions, brimstone hills and thousands of natural curiosities. Throughout the park are excellent hotels, good roads and bridges built to the chief attractions, and steamers on the lakes. All the streams and lakes are stocked with fish. Yellowstone Lake, fifteen by twenty miles in size, lies 7,741 feet above the sea.

GUAM.

Area: 225 square miles. Population, 1920: 13,275. Population per square mile: 58.3.

Guam, the largest of the Marianas Archipelago, was ceded by Spain in 1898. It has a good harbor and is used as a United States Naval Station. It is 32 miles long and from four to ten wide. Agana is the capital. The commandant of the Naval Station is, by appointment of the President, Governor of the island. There is a compulsory system of public education now established. Native children are taught English, agriculture and handicraft. The products are corn, rice, coffee and sugar. There is valuable timber, and there are about 5,000 head of cattle and 800 water buffalos on the island.

TUTUILA (American Samoa).

Area: 77 square miles. Population, 1920: 7,550. Population per square mile: 94.

The Island of Tutuila and all other islands of the Samoan group east of longtitude 171 degrees west came into possession of the United States in February, 1900. The harbor of Pagopago penetrates the south coast of Tutuila like a fiord, and is the only good harbor in Samoa. It is a United States Naval Station, under a Commandant, who is also Governor of the island. The chief products are copra taro, breadfruit, yams, cocoanuts and bananas. It is said of Pagopago "the harbor could hold the entire naval force of the United States, is so arranged only two vessels can enter at the same time. The coaling station, being surrounded by high bluffs, cannot be reached by shells from outside." The population is rapidly being educated. Over 2,000 pupils in schools. Christian churches are active.

WAKE ISLAND.

Wake Island is a small island in the direct route from Hawaii to Hongkong, about 2,000 miles from the first and 3,000 miles from the second.

The United States possesses a number of scattered small islands in the Pacific Ocean, some hardly more than rocks or coral reefs, over which the flag has been hoisted from time to time. They are of little present value, and mostly uninhabited. The largest are Christmas, Gallego, Starbuck, Penrhyn, Phoenix, Palmyra, Howland, Baker, Johnston, Gardner, Midway, Morell and Marcus Islands. The Midway Islands are occupied by a colony of telegraphers in charge of the relay in the cable line connecting the Philippines with the United States, in all about forty persons. England lays claim to some of the islands, though the ownership of the United States is without doubt valid. Some have rich guano deposits.

HAWAII.

Area: 6,449 square miles. Population, 1920: 255,912. Population per square mile: 39.4.

There are about twenty islands belonging to this group, but of these some are barren rocks. Eight are important islands, with a long and interesting history. Hawaii became a Republic in 1894, and was admitted to the United States as a Territory April 30, 1900. The mountain altitudes are from 4,000 to 14,000 feet. The principal islands of the group are Hawaii, Maui, Oahu, Kauai, Molokai, Lanai, Niihau, Kahoolawe. In Hawaii there are still two active volcanoes. The climate is warm but very equable. The Japanese current and the trade winds make the air cool and pure. In some parts vegetation is very luxuriant. The numbers of native Hawaiians is continually decreasing, and comprise but about one-tenth of the population. About forty per cent. of the people are Japanese. About ten per cent. Americans. There is an excellent public school system, and the English language is used in the schools. There are Normal and Training schools, a reformatory, industrial for boys, and one for girls, also a college of agriculture and the mechanic arts. There are colleges and seminaries for higher education. The coast defenses are cared for by the Federal Government. Generally speaking, the soil is fertile. Sugar and rice are staple crops. Coffee, honey, hides, sisal, bananas, pineapples and wool are largely exported. Plantations are supplied with irrigating canals. Exports to the United States amounted to $142,246,003 for year ending June 30, 1920, of which $116,420,795 was for brown sugar. Coffee, rice and fruits make up the rest. There are 787,083 acres of forest reserve. Lines of steamers connect the islands with the United States and other countries, and there is regular steamer communication between the islands. There are about 300 miles of public railway, 5,718 miles of telphone communication and cable connection with the mainland, with Guam and other American possessions in the Pacific. The Marconi System of wireless telegraphy is in operation between the islands and for communicating with the vessels at sea, and with the west coast of the United States. Farm animals are plentiful as well as all kinds trophical fruits and plants. Honolulu is the largest city and is the chief commercial center of the Pacific Islands. Hilo is the center of the coffee district and Wailuku is the center of the sugar district. Lihue is an important seaport. All these and many others are growing cities equipped with all modern improvements. Pearl harbor, near Honolulu, is one of the finest and most capacious in the world.

PHILIPPINE ISLANDS.

Area: 115,026 square miles. Population, 1920: 10,350,640. Population per square mile: 89.

Extending through 16 degrees of latitude and 9 degrees of longtitude from Formosa to Borneo, and the Moluccas is a group of over 3,100 islands and islets in the Malay Archipelago, named the Philippines, after Philip II of Spain. They were discovered by Magellan in 1521 and were held by Spain more than three centuries. Less than 1,200 of them are worthy of being called islands and only about 400 of them are permanently inhabited. They were ceded to the United States by Spain in 1898 after the close of the Spanish-American War, on payment by the United States of $20,000,000. Government administered by the United States in modified territorial form. Governor General appointed by President of United States. Luzon is the most populous of the islands, and following in order of importance are Panay, Cebu, Mindanao, Negros, Leyte, Bohol and Samar. Manila is the capital. Other cities and towns of importance are Albay, Batac, Batangas, Carcar, Cebu, Dagupan, Hagonoy, Iloilo, Janluay, Laoag, Lingayen, Lipa, Panay, Pototan, Ormoc, Nueva, Caceres, San Carlos, San Fernando, San Pablo, Sibonga, Tabaco, Tuburan, Urdaneta, Vigan and Zamboanga. There are about 20,000 Americans and Europeans and about 50,000 Chinese. There are some tribes of Negritos, but most of the natives are of the Malay race. The central government is composed of the Governor, who is also president of the Philippine Commission, and eight commissioners, together with the Philippine Assembly. For civil government the islands are divided into 38 provinces, each with a Governor. These provincial Governors are elected by popular vote, except in the six provinces inhabited largely by non-Christian tribes, and in these they are appointed by the Governor-General. In about 650 towns local municipal government has been established. Head hunting and other barbarous practices have been abolished. Under the beneficient government of Americans the Philippinos are prosperous and contented and are rapidly becoming an English speaking race. The Moros are Mohammedan, and there are some pagan tribes. The Archipelago is divided into thirty-six educational divisions. Each has a superintendent and all are under the direction of a secretary of public instruction. A superior and local board have advisory functions. English is taught in all the public schools. There are public night schools for adults. There is a school for training teachers, a medical school, as well as industrial and trade schools. The St. Thomas University at Manila has several faculties, including one of medicine. Agriculture is an important industry and is rapidly advancing. The Bureau of Agriculture is improving conditions with experimental farms where improved varieties of tobacco, hemp and sugar are grown and seeds from them distributed for general cultivation. The immense forests of valuable timber, gum and dye woods are under the supervision of the Forestry Bureau. Mining industries have not as yet been largely developed. There is gold in almost every island and many of the mines have long been worked by the natives. There are many other minerals. Domestic weaving is carried on by native women. Chief among manufactures are Manila cigars and Manila hemp fiber. Earthenware, cigar cases and straw hats are made. Coffee, cotton, and all kinds of tropical fruits are raised. The climate is tropical. The high temperature and abundant moisture produce a luxuriant vegetation. The antelope, fox, wild cat, monkey and alligator are among the wild animals that are found. Water buffaloes and ponies are the domesticated beasts of burden. Tortoise and fish are abundant. Nearly every island has a mountain range, some of whose peaks are very rugged.

PANAMA CANAL ZONE.

Area, 502.5. Population, 22,828.

The Canal Zone is a strip of land 10 miles wide, 5 miles on each side of the Canal, extending from coast to coast and 3 miles at each end into the oceans. Control of this in perpetuity was acquired by the United States from Panama by a treaty ratified Feb. 26th, 1904. The cities of Panama and Colon and their adjacent harbors are not included in the treaty, but the U. S. is privileged to control sanitary conditions when public welfare demanded. Panama received a lump sum and also an annual rental which began 9 years after ratification.

The grant includes "all islands within the Zone and in addition the group of small islands in the Bay of Panama named Perico, Naos, Culebra and Flamenco, and the further privilege of control of any other lands and waters outside of the zone, which may be necessary and convenient for the construction, maintenance and protection of said enterprise. Under this arragement the United States acquired the islands in Lake Gatun, and shores of this lake up to an elevation of 100 feet above mean sea level. The area of 502.5 includes this territory but not the extensions into the water at each end.

The population fluctuates according to the amount of work involved. In 1912 it was 62,810, in 1916, 31,048.

Of the present population 12,370 are white, 10,429 are Negroes and 59 are Chinese, or other colored. School attendance is almost general and nearly all of the population speaks English.

The Panama Canal channel is 42 miles long between shore lines or 50 miles if the excavations into the sea are included. Construction was begun May 4, 1904, and eleven years were consumed in the work. The first ocean steamer passed through August 3, 1914, and Aug. 15, 1914, the Canal was open to commerce. The water distance between New York and San Francisco has been reduced to 5,262 miles by the Canal. Formerly by the Straits of Magellan, 13,135 miles.

The Panama Railroad was originally built in 1850. It became necessary to abandon small sections of this road from time to time as the construction of the Canal progressed, and now, with the Canal completed, a new railroad is also completed from Colon to Panama, on the east side of the Canal.

PORTO RICO.

Area: 3,606 square miles. Population, 1920: 1,299,809.

Population per square mile: 37.

This island possession of the United States was discovered by Columbus in 1493. In the early part of the sixteenth century nearly all the natives (about 700,000) had been exterminated by their oppressors. The island was ceded to the United States by the Spanish treaty of 1898 and has been given a modified territorial government. It is about 100 miles long and 36 wide, and is separated from Cuba by the island containing the Republics of Santo Domingo and Haiti. It is about half the size of the State of New Jersey. The surface is hilly and picturesque. A range of mountains runs from east to west, the highest peak of which is 3,609 feet. There are broad plains and many tracts of level, fertile land. Along the north coast are numerous bays, creeks and navigable lagoons. The climate is generally salubrious, the mean temperature varying not more than six or eight degrees. The hot season is June to September and the cold December to February. The average daily temperature is 80 degrees. Snow never falls; between July and October there are sometimes tropical hurricanes. The present inhabitants are Creoles, Gibaros, the lower class of white peasantry, African half-breeds and the full blooded Africans, and an increasing number of Americans. Education is now compulsory; there are now 4,330 public schools; four high schools, and something over 200 private schools. There is a large normal school at Rio Piedras and a university at San Juan. The Governor and council, or heads of departments, are appointed by the President of the United States. San Juan is the capital and most important city. By the Jones Act of 1917 Porto Ricans were given American citizenship and the island created a Territory, with executive, judicial and legislative branches of government, with a resident commissioner at Washington elected by the people for a term of four years. Ponce, the second city, has a large trade in coffee and tobacco. Aguadilla, Arecibo, Arroyo, Fajardo, Mayaguez, Naguabo and San German are all important places where there is more or less tobacco manufacturing. Agriculture is the largest industry. Coffee, sugar, tobacco, and all kinds of tropical and sub-tropical fruits are raised in abundance. Sugar cultivation is increasing. Cotton is a valuable crop and is exported to quite an extent. More than 15,000,000 cigars are exported every year. Porto Rican cigars are of a very good quality. Much lace and other delicate hand-made goods are made by the women and find great vogue in the States. Exports to the United States for the year ending June 30, 1920, were valued at $133,207,508, and imports, $90,724,259. There are minerals in paying quantities. There are about 350 miles of steam railway and over 1,200 miles of good interior macadamized and dirt roads. The people are prosperous, happy and loyal.

VIRGIN ISLANDS OF THE UNITED STATES.

The Islands of St. Croix, St. Thomas and St. John originally belonging to Denmark, were sold to the United States for $25,000,000. The United States took possesssion of the islands March 31, 1917. They lie about 50 miles east of Porto Rico, have a combined area of 132 square miles, and a population of 26,051. Sugar cane, cotton, fruit and vegetables are the principal products. The population complained in 1921 because they are not being Americanized fast enough. The islands are valuable commanding one of the main routes to the Panama Canal.

DOMINION OF CANADA

Area: 3,729,665 square miles. Population: 8,769,489

Population per square mile: 2.13.

The Dominion of Canada embraces all the region bounded by the Arctic Ocean on the north, the United States on the south, the Atlantic Ocean on the east, and Alaska and the Pacific Ocean on the west, not including Newfoundland and Labrador, which are under a separate governor. Quebec was founded by the French in 1608. Originally the Dominion comprised only the Upper and Lower Provinces (Quebec and Ontario), Nova Scotia and New Brunswick; but since then there have been added British Columbia, Prince Edward Island, The Northwest Territories, Manitoba, Yukon, Alberta and Saskatchewan. The two latter were formed and admitted in 1905. Canada has a constitution similar to that of Great Britain. The executive authority is vested in the British government, and administered by a governor-general and private council. For legislative purposes there is a parliament consisting of two houses: The senate and house of commons. The nine provinces have each a separate parliament and a lieutenant-governor, appointed by the governor-general. They regulate their own affairs, provided they do not interfere with the policy of the central administration.

ALBERTA

Area: 252,985 square miles. Population: 581,995.

Population per square mile: 2.33.

This, one of the youngest provinces of Canada, is separated from British Columbia by the Rocky Mountains. It was named in honor of the Princess Louise Alberta. It was not, however, until late years that it came to be known that this area was valuable for something besides the production of fur bearing animals. It is now being sought for agricultural development. The railroads that stretch across the continent have brought to Alberta thousands of home seekers. Agriculture, mining, lumbering and grazing are chief industries. Of agricultural products wheat is the most important. All kinds of farm animals and poultry are raised and some fruits. There were 34,575,000 bushels of wheat raised in 1919. Alberta is one of the principal mining provinces of Canada. The value of manufactured articles was $30,000,000 in 1917. The cattle industry has been of great importance. There are large grazing tracts and fine grasses. Coal of excellent quality has been found in many places. Medicine Hat has been lighted and heated with natural gas for several years with apparently no diminution of supply. Irrigating canals have been constructed and others are in progress through tracts not sufficiently watered. Calgary is the principal city and has a number of manufacturing establishments. Edmonton, the capital, is a rich city, with many large commercial industries, and fine educational facilities. Lethbridge has large mining interests, and is located in a natural wheat belt. Medicine Hat is a wealthy city with modern improvements. Strathcona is the site of the University of Alberta. Wetaskiwin, Tabor, Raymond, Red Deer, McGrath, MacLeod, Lacomb, High River, Fort Saskatchewan, Coleman, Claresholm and Cardston are other large and prosperous cities and towns. There are about 4,519 miles of steam railway in operation.

BRITISH COLUMBIA.

Area: 355,855 square miles. Population: 524,582.

Population per square mile: 1.47.

The first settlement was made in the island of Vancouver in 1806, which was made a British province but became part of British Columbia in 1866. This is the most western province of the Dominion and it has three times the area of the United Kingdom. This entire region is mountainous. The Rockies and the Coast Range running parallel contain many peaks over 10,000 feet, some covered by glaciers. The coast is very irregular and possesses many fine natural harbors. There are numerous rivers, those among the mountains flowing through deep ravines. There are interior plains where excellent agricultural land abounds and there are pasture lands in the south covered with bunch grass on which horses, cattle and sheep live through the winter. It contains more than one-half of all standing timber of Canada and is second in mineral production. Gold and silver as well as iron, coal and many other minerals are in abundance. There are forests of fine timber. Near the ocean and on the islands the climate is moderate. On the high elevations and in the interior it is colder, very severe in the northeastern region. The school system is modeled after that of Ontario. Agriculture is not as yet largely developed but great progress is being made in the rich agricultural and fruit growing valleys. There is valuable trade in furs, such as mink, martin, beaver, fox and otter. The great wealth of the province, however, is in its mining industries. There are over 4,247 miles of steam railway now traversing the province. Victoria is the capital and chief city. It is the principal military station of Great Britain on the Pacific Coast. It contains the government and parliament buildings. It is the terminus of the Canadian Pacific Railway. New Westminster, between Vancouver and the United States border is the market for the Fraser and Thompson Rivers gold fields. It has extensive fisheries. Besides these and Chilliwack, Esquimalt, Prince Rupert, Prince George, Rossland, Union and Wellington, there are other important and growing cities, some of which are being developed by the rapidly extending railway systems.

MANITOBA.

Area: 231,926 square miles. Population: 610,118.

Population per square mile: 2.63.

The province of Manitoba was formed and became a part of the Dominion of Canada in 1870 after the Hudson Bay Company had surrendered to the British Government all claim to that territory. The province is nearly the center of the Continent. It very much resembles Minnesoto and North Dakota, which are on its southern border. It has numerous lakes and high plateaus, there are few wooded areas except along the water courses. The summers are short and very warm, the winters long and severe and the springs very short. On the whole, it is very healthful. It is governed like all the provinces as outlined in the article on Canada. The industries are almost exclusively agriculture and stock raising. The soil is rich and large areas have been brought under cultivation by the steam plow and turned into wheat fields. The Red River and Assiniboine valleys are the most important wheat raising areas; large herds of cattle graze upon the wide unfenced plateaus. Horses, sheep and swine are valuable interests. Many kinds of berries and large fruit are successfully cultivated, as well as potatoes and garden vegetables. The average yield of wheat is about 40,000,000 bushels and of oats about 32,000,000. Winnipeg is the capital and principal city, situated at the confluence of the Red and Assiniboine Rivers and at the head of navigation from Lake Winnipeg. It enjoys a constant increase in population and trade. It is the greatest grain export market in the British Empire. It has over 150 factories with an output of $25,000,000 yearly and there are large iron industries and manufactories of structural steel. There are 4,168 miles of railroads.

NEW BRUNSWICK.

Area: 27,985 square miles. Population: 387,867.

Population per square mile: 13.8.

New Brunswick, lying northwest of the State of Maine, is 205 miles long and 187 wide. It has a coast line on the Gulf of St. Lawrence of 500 miles. There are fine bays and harbors. The Bay of Fundy is noted for its high tides, sometimes of 50 feet, rushing in with frightful speed. The numerous rivers afford excellent water power. The surface is mostly undulating, the highest elevation being 2,470 feet. For the most part it is covered with forests of spruce, where game abounds to such an extent as to make it a paradise for hunters. Liberal provision has been made for education. About half a million dollars are expended yearly for free schools, which are not sectarian and are under the control of the government. There are primary intermediate and grammar schools. At Fredericton is the University of New Brunswick. Forests and fisheries are the chief sources of wealth. Fair crops of cereals and potatoes are raised, and stock raising and dairy farming are important industries. There is a large acreage of land suitable for farming not yet under cultivation. There are copper and iron ores of excellent quality as well as coal, marble and building stone. Fredericton is the capital. It contains the government buildings and the university. St. John is the largest city. Its principal business is lumbering and ship building. Chatham, Gagetown, Moncton, St. Andrews, St. Stephen and Woodstock are important points. There are 1,959 miles of railway.

NOVA SCOTIA.

Area: 21,428 square miles. Population: 523,837.

Population per square mile: 24.4.

Nova Scotia was originally a French possession, known as Acadia. The Acadians were removed by the British, which suggested Longfellow's "Evangeline." It is the most easterly province of the Dominion, and is a peninsula connected with New Brunswick by a low, fertile isthmus some sixteen miles wide. About one-fifth of its area consists of lakes, rivers and inlets of the sea. About half its surface is adapted to farming. The climate is not as cold as Central Canada. Frosts are not usual before Christmas. The spring is short and vegetation rapid in growth. For the most part the summers are dry and warm. The public school system is free and attendance compulsory; the government has an agricultural college and experiment farm near Truro, where both men and women can receive a practical education in agriculture and domestic economy. Halifax, the capital, has a magnificent harbor. It is the chief naval station of the Dominion. Annapolis is the oldest European settlement on the Atlantic Coast. The productive Annapolis Valley formed the site of the prosperous settlement made famous by "Evangeline." Amherst, Antigonish, Digby, Liverpool, Pictou, Shelburne, Truro, Windsor, Yarmouth, North Sydney, Baddock, Port Hood, and Arichat are places worthy of note. There are 1,480 miles of railway open.

ONTARIO.

Area: 407,262 square miles. Population: 2,929,054.

Population per square mile: 9.67.

Ontario is the most populous and wealthiest province of the Dominion. For the most part the surface is less than 1,200 feet above the sea; but few hills rise to 2,000 feet. Ontario is full of small lakes, has an extensive river system and almost unlimited water power. The climate is usually healthy, but the winters are severe and long and the heat during the summer frequently extreme. On the peninsula crops mature about as they do in New York. The educational system provides practically free instruction and gives successful pupils the highest education at a very moderate cost. Besides the University of Toronto and Upper Canada, a very noted institution, there are several denominational, medical and other colleges. Trinity and Knox Colleges are located at Toronto; the Ontario Agricultural College at Guelph. There is an experimental farm at Ottawa with branches in the other provinces. Agriculture leads the industries. The land is fertile and the Canadian farmers are thrifty. Ontaria supplies about fifty per cent. of Canada's dairy products. All cereals are grown in abundance, as well as potatoes of excellent variety, and garden vegetables. Apples and hardy fruits are plentiful. Stock raising and dairy farming flourish; the wool clip adds largely to the revenue. Export trade is on the increase. Lumber interests are of great importance, also mining and fisheries. Manufacturers are increasing, their value being $580,000,000 yearly. The forest area is about 60,000,000 acres. Toronto, the capital and most important city, is the site of the provincial government buildings and the fountain head of the Canadian School System. It has many well-appointed educational institutions. It has extensive manufactures and is the chief center of commercial and industrial activity in the Dominion. Ottawa, the capital of the Dominion, is the center of the great lumber districts. Wood pulp is an important article of manufacture and export. Cobalt has become an important article of export, breaking the monopoly of Saxony. It was discovered only a few years ago by a party of American tourists. The Parliament buildings are imposing and substantial structures. London, Kingston and Hamilton are large, rich cities. Bellville, Brantford, Guelph, Peterboro, St. Catharines, St. Thomas, Stratford, Windsor and Woodstock are places of importance. There are 11,057 miles of railroads open.

PRINCE EDWARD ISLAND.

Area: 2,184 square miles; Population: 88,615.

Population per square mile: 40.56.

This garden land of the Dominion is given up almost entirely to farming. It is well settled, is 140 miles long from east to west and varies from 4 to 27 miles in width. Its surface is generally undulating and well watered. Its forest lands are now mostly cleared, and it has no elevations more than 500 feet. The climate is unusually healthy, the winters not being severe and the summers very comfortable. There is a very thorough educational system; primaries, high and normal schools, and a college. The schools are not sectarian. Charlottetown is the capital and chief city. It is the center of trade on the Island. Summerside, Georgetown and Lowrie are other important places. Agriculture is the principal industry. Considerable attention is given to silver fox farming. Potatoes and cereals are the chief crops: fisheries are a source of great profit, and horses, swine and poultry are raised. There are few manufacturing or mining interests. Coal is believed to exist, but very deep in the ground. The Province has 278 miles of railroad in operation.

QUEBEC.

Area: 690,865 square miles. Population: 2,361,199.

Population per square mile: 3.42.

Quebec extends from the northern borders of Maine, New Hampshire, Vermont and New York, northward to Hudson Strait and Baffin Land. There are no great elevations except along the St. Lawrence eastward, these being continuations of the Green Mountains of Vermont. The surface is for the most part level for great distances. The St. Lawrence and its tributaries are streams of great volume and commercial importance. Along the Gulf of St. Lawrence there is a coast line of 1,164 miles The falls on the Montmorency near where that stream enters the St. Lawrence, seven miles below Quebec, are 250 feet high and 50 feet wide. They afford one of the most striking scenes in North America. The St. Lawrence, navigable for large ships to Montreal, is closed by ice four months in the year, during which the ocean outlet for Canadian produce is by way of Portland, Maine. The climate is much colder here than in Ontario in winter. Summers are warm and rainfall ample. Cereal and vegetable products reach perfection rapidly. There is a council of education made up of two committees. An important part of the population of Quebec is French and use the French language. Agriculture is the chief industry; all kinds of cereals and many fruits are grown in abundance as well as garden vegetables. Stock raising and dairy and poultry farming are a large source of wealth. Produces more than one-half of the pulp wood of Canada. Lumber interests are very valuable and fisheries are of very great importance. Asbestos is largely mined, and there are copper, iron, mica and graphite. Montreal is the largest city. Quebec is the capital and one of the largest lumber markets in Canada. The new bridge at Quebec was opened for traffic in 1917. The main span, the longest in the world, being 1,800 feet long, 100 feet longer than that of the Forth bridge in Scotland. It cost about $15,000,000, and its construction on the cantilever principle was a most daring piece of engineering. La Val University and a Presbyterian College are located here; Hull, opposite Ottawa, has also a large Lumber trade as well as extensive manufacturing and commercial interests. Three Rivers and St. Johns are rich cities. Levis, Lennoxville, St. Hyacinthe, Sherbrooke, Sorel and Valleyfield are other large and prosperous cities. There are 4,734 miles of steam railroads in operation.

SASKATCHEWAN.

Area: 241,310 square miles. **Population:** **757,510.**
Population per square mile: 3.14.

Immediately east of and adjoining Alberta is a region, vast in extent, known as the Province of Saskatchewan, from an Indian name meaning "rushing waters." It is about 760 miles from north to south and 300 miles from east to west. It became one of the provinces of the Dominion in 1905, and in the main is a fertile region, though far north it is more or less swampy in some localities and mountainous in others. In the southern regions are broad, grassy praries, which are seemingly as productive as those of Manitoba. But a few years ago this fine territory was inhabited almost solely by Indians and wild animals. Stretching away north and west of Prince Albert are immense forests of pine, poplar and birch. The central and southern regions are drained by the Saskatchewan River and its tributaries. Rising in the Rocky Mountains, this great river flows about 1,200 miles and empties its waters into Lake Winnipeg. The climate admits of the production of nearly all cereals except corn. It is dry and healthful. Potatoes and many vegetables do well, as also hardy fruits. The soil is very productive and the summer heat has been known to reach 100 degrees. About 115,000,000 bushels of wheat are harvested yearly and about as many bushels of oats. Barley and flax are valuable crops. Sheep and stock raising are important industries, and while dairy interests are still young, they bid fair to become very large within a few years. Many creameries are now being erected. Mining interests are valuable in the north and the lumber industry and coal mining are important. Game, fish and fur add to the wealth of the province. Education has progressed with great rapidity. School districts, limited to 25 square miles, are established by the government and controlled by the taxpayers. There are at the present time about 3,226 schools in the province, and there is a university at Saskatoon. Regina is the capital and largest city. It has a college and normal school and is located in a fine agricultural belt. Saskatoon is the second largest city and covers an area of about four square miles. Here are mills, factories and shops. Arcola, Battleford, Broadview, Estevan, Grenfell, Humboldt, Indian Head, Lloydminster, Maple Creek, Melville, Moose Jaw, with mills, breweries and factories, Moosomin, North Battleboro, Oxbow, Prince Albert, Rosthern, Swift Current, Weyburn, Wolseley and Yorktown, are all fine growing cities and towns. The raising of farm animals, cereals, mining, lumbering and coal are among the principal industries. Altogether there are over 6,124 miles of steam railways in Saskatchewan.

YUKON.

Area: 206,427 square miles. Population: **4,162.**
Population per square mile: 0.02.

The Yukon Territory was constituted a separate political unit in 1898. Mining is the principal occupation. Coal, copper, gold are the chief minerals, the total value of which at last reports amounted to $4,550,000. The principal forest trees are white and black spruce, balsam, poplar and birch. The country contains much big game, such as the moose, caribou, mountain sheep and bears. Fisheries are important. There are 102 miles of railway in the territory.

NORTHWEST TERRITORIES.

Area: 1,242,224 square miles. Population: 6,684.
Population per square mile: 0.005.

These territories comprise the three Provisional Districts, namely, Mackenzie, Keewatin, and Franklin. The government is carried on under the direction of a commissioner, aided by a deputy commissioner and five councilors.

NEWFOUNDLAND AND LABRADOR.

Newfoundland.
Area: 42,734 square miles. Population: 254,587.
Population per square mile: 5.7.

Labrador.
Area: 120,000 square miles. Population: 4,073.
Population per square mile: .054.

John Cabot discovered Newfoundland in 1497. It was inhabited by an Indian tribe, the last survivors of which disappeared a century ago. It is noted for its fishing banks, particularly for its cod, lobsters and herring. Labrador, a narrow strip running northward, is considered as part of the colony. Newfoundland is roughly triangular in shape; each of its three sides being about 350 miles in length. It is so fringed with islands and indented by bays that it has a coastline of about 2,000 miles. In the west, is a ridge of hills rising from 1,000 to 2,000 feet. These are dotted with innumerable ponds and lakes, which are the sources of many streams. The hills are poorly wooded, while the valleys are for the most part covered with valuable timber. The industries are mainly confined to catching and packing fish for export. There is considerable lumbering, however, and some coal and iron are found. There are about 888 miles of steam railway, and a system of local telegraphs and cable connections with Europe, Canada and the United States. St. John's is the capital and principal city. It is the center of the fishing trade. Other important places are Harbor Grace, Carbonear, Twillingate and Bona Vista.

MEXICO.

Area: 767.198 square miles. Estimated population, 1912:
15,501,684. Population per square mile: 19.2.

Yucatan was visited by Solis and Pinzon in 1508 and major Mexico in 1518 by Francisco Hernandez de Cordova. In 1519, Cortez landed where Vera Cruz now stands and ascended the tableland, where he found the Aztecs united under Montezuma. In two years Cortez with ruthless methods subdued the Aztecs, and the country continued a Spanish possession for three centuries. In 1810 the rule of Spain had become so unbearable that it caused an outbreak, headed by Hidalgo, who declared the Independence of Mexico on September 15 of that year. In 1821 General Iturbide declared himself emperor of Mexico, but had to flee in 1824, and the republic was established. Several presidents ruled the destinies of the country with more or less severity until 1864, when the throne of Mexico was offered to Archduke Ferdinand Maximilian of Austria, by a European clique, but this effort to import imperialism into America met with disaster and Maxmilian was executed in 1867, and Benito Juarez, who had been president of the northern part of the country, took the reins of government. He was followed by Lerdo de Tigada, who in 1876 fled, and General Porfiro Diaz made his entry into Mexico City. He ruled the country with the exception of four years (1880-4, General Manuel Gonzalez) until May 25, 1911, when he presented his resignation to congress. On November 6, 1911, Senor Francisco I. Madero assumed office of president and ruled until February, 1913, when a coup de'etat took place, resulting in the president's murder February 23, 1913, and his replacement by General Victoriano Huerta. In April, 1913, a rebellion was raised in the north by Generals Venustiano Carranza and Francisco Villa, leaders of the constitutionalists, and the insurrection steadily advanced southward. Huerta became involved in differences with the United States, and on April 27, 1914, United States troops landed and seized Vera Cruz. Huerta resigned on July 15, 1914. Francisco Carbajal was in charge of the government until August 12, when he surrendered it to a representative of Carranza. In October, 1915, Carranza was recognized as president of Mexico by the United States government. He was deposed for inefficiency in 1920, and while attempting to leave the country with a large stock of gold was, on May 20, treacherously assassinated. He was succeeded as president by General Alvara Obregon, December 1, 1920, who did much to pacify the country. Villa disbanded his army and settled down as a farmer in July, 1920, and other malcontents, fearing intervention, became equally quiet. The present constitution of Mexico bears date of February 5, 1917. By its terms Mexico is declared a federative republic, following in general form the government of the United States.

Mexico is a region of mountain elevations, but through the center of the country is a vast plateau or table-land, a southward continuation of the elevated regions of the southwestern United States, from six to eight thousand feet above the sea. Lowlands lie at the foot of the plateau borders and make up the rich coastal strips on both the Atlantic and Pacific sides. The highest point in Mexico is the volcano or peak of Orizaba, about 18,250 feet. Popocataptl, another volcano, rises to 17,500 feet. There are numerous other volcanoes sometimes active, with their snow-line at 14,500-15,000 feet.

Mexico is sparingly watered, and the streams, descending from the elevated interior, assume the character of rapid torrents, dry at one season, and overflowing at another. The lakes of Mexico are numerous, but unimportant. The largest is Chapala, with an area of 1,500 square miles. It has great diversities of climate within a relatively narrow compass, generally divided into three classes; the hot lands, from the sea to 3,000 feet elevation; temperate, from 3,000 to 5,000-7,000 feet; and cold above 7,000 feet. The coasts are hot, humid and in many parts unhealthy. The elevated tracts of the middle zone are usually healthy and enjoy an agreeable temperature.

The republic is well suited for agriculture. Within a radius of 300 miles may be produced the crops of the tropical, semi-tropical and temperate zones, owing to the varying latitude. The soil is rich in all sections. There are millions of acres of virgin soil and millions more which have been barely skimmed by the antiquated methods of agriculture in vogue. Principal products are corn, cotton, sisal, jeniquen, rubber, wheat, coffee, and beans. There is a large output of sugar and molasses.

Mining is the principal industry, and is carried on in 24 of the 31 states and territories. The production of gold and silver amounted to over $70,000,000 for the last year reported. The other minerals include copper, lead, iron, quick-silver, tin, cobalt, antimony and sulphur. The latter is found in the crater of Popocatapetl. Coal production is estimated at 700,000 tons annually. Petroleum production is on the increase, the last annual report giving 15,689,268 barrels, and Mexico's oil has become one of the necessities of the commercial world. The oil industry is entirely in the hands of Americans and Europeans, as are the larger mines and other industrial enterprises. Total exports in 1918, $183,652,725: imports, $82,235,017. In 1920 imports from the United States were $143,785,526; exports to the United States, $168,330,626. **Opals and "Mexican Onyx" are mined extensively.**

Education is free and compulsory. The University of Mexico is located in Mexico City, and there are numerous other colleges and institutions for higher education, private, clerical and association. There is a national library and 150 other public libraries, museums for scientific and educational purposes, and meteorological observatories. The periodicals are printed in Spanish, English, Italian and French. The first newspaper in America was printed in Mexico City. Mexico City, capital and chief city, is one of the most imposing cities of Latin America. Its lofty position in a tropical region insures to it an equable and exceptionally pleasant climate. It has fine academies, theaters, public buildings and museums. Zacatecas is a city of importance in mining. It is built over a vein of silver, contains good residences, municipal palace, theaters, cathedral, and has manufactures of pottery, and a large distributing trade. Gualalajara is noted for its manufactures. Leon has an extensive commerce. Other important and growing cities are Aguascalientes, Campeche, Chihuahua, Colima, Cuernavaca, Durango, Guanajuato, Hermosillo, Irapuato, Merida, Monterrey, Morelia, Oaxaca, Orizaba, Pachuca, Puebla, Saltillo, San Luis Potosi, Tampico, Tepic, Toluca, Tuxpam and Vera Cruz. Mexico has 15,804 miles of steam railway in operation.

CENTRAL AMERICA

BRITISH HONDURAS (Belize).

Area: 8.592 square miles. Population, 43,000.
Population per square mile: 5.1.

A British crown colony on the Caribbean Sea, south of Yucatan, noted for its production of mahogany and logwood. There are schools supported by the government and sectarian schools, all well attended. Chief town and capital is Belize, and Corozal is another important place. The coast is low and swampy, the climate is hot, moist and unhealthy for white people, yet there are few epidemics, while earthquakes and hurricanes are unknown. The west and southern frontiers are mountainous, and dense forests abound.

COSTA RICA

Area: 18,691 square miles. **Population:** 164,000.
Population per square mile: 24.8.

Costa Rica has been an independent State since 1821. It has a president who is elected for four years and a chamber of representatives elected for the same period. The right to vote is free to all who can support themselves. Spanish is the universal language of the country. Education is compulsory and free. The National Government pays the teachers in the elementary schools. Almost everything is grown, but the principal crops are coffee and bananas. There is considerable export of cocoa, hides, rubber and valuable woods. New rubber plantations are proving productive. There are gold and silver mines. San Jose is the capital, and other growing cities are Alajuela, Cartago, Heredia and Limon. The state has 402 miles of railway.

GUATEMALA

Area: 48,290 square miles. **Population:** 2,232,000
Population per square mile: 40.2.

A constitutional republic, elects a president by vote of the people for a term of six years, and a legislative body for four years. About half of the population are the native Indians, most of the remainder being half caste. There are very few pure descendants of Europeans. Capital is Guatemala, and other important places are Quezaltenango, Coban and Totonicapan. The military force of Guatemala, as reorganized, numbers 85,535 officers and men when mobilized. The reserve army consists of 40,575, divided into 81 battalions. All male citizens are liable to conscription from 18 to 50. Education is free and compulsory. There are many private as well as public schools; primary and secondary as well as higher institutes and normal schools; a national central institute which confers degrees. The soil is extremely fertile. Coffee is the principal crop. Tobacco, sugar, rubber and bananas are largely exported; nearly all cereals are grown, quite abundantly. It has 502 miles of railway.

HONDURAS

Area: 44,275 square miles. Population: 637,114
Population per square mile: 13.8.

The republic was established in 1821. Exclusive authority rests with the president, who is elected by popular vote for four years. The majority of the population are Indians. The seat of government is Tegucigalpa; other important places are Pespire, Choluteca, Nacaome, La Esperanza and Santa Rosa. Every citizen of Honduras belongs to the regular army from the age of 21 to 35; to the reserves from the age of 35 to 40. Foreigners are exempt from service, naturalized citizens being exempt for 10 years. The troops on July 31, 1918, consisted of 46,106 fighting men and 21,505 reserves, making a total force of 77.611. Public instruction is free, and compulsory from 7 to 15 years of age. At the capital is a university, instructing in law, medicine, and other sciences. Bananas, rubber, coffee, sarsaparilla, tobacco, sugar, oranges, lemons, beans, rice and wheat are grown. Cattle are raised and exported as well as horses, mules, sheep and swine. There are about 500 miles of railway open.

NICARAGUA

Area: 49,200 square miles. Population: 638,119
Population per square mile: 18.

Nicaragua became a republic in 1843. Its present constitution was adopted in 1913. The president is elected for four years and there is a congress of two houses with 40 deputies, elected for 4 years, by universal suffrage, and 13 senators. The population is of mixed blood and races and use the Spanish language. The active army consists of 2,000 men; in war it may rise to 7,000. Military service is obligatory between 17 and 55 years of age. The period of active service is a year. The marine consists of one very small boat, on the Pacific coast, capable perhaps of carrying a machine gun and 25 men. There are 356 public schools, 10 colleges and 2 universities. Such crops as coffee, tobacco, bananas, cocoa, sugar and cereals can be raised in great profusion, but the scarcity of labor prevents anything like such crops as are possible. In the forests are most valuable woods, and medicinal plants, gums, and dyes. Cattle are abundant. There are several gold mines and one of silver worked by British and American companies. Precious stones are found. Managua is the capital. Leon, the former capital, and other important places are Granada, Matagalpa, Masava, Jinotega, Chinandega, Boaco and Bluefields. There are 180 miles of steam railway.

SALVADOR

Area: 13,183 square miles. **Population:** 1,336,442.
Population per square mile: 99.

Salvador became a republic in 1839. President is for 4 years and the congress for one year. Population is mostly mixed races and Mestizos. San Salvador is the capital; other important places are Santa Ana, San Miguel and Nueva San Salvador. The army may be divided into three parts: (1) available force, (2) forces that can be made available at short notice, (3) reserve force. In case of war, military service is compulsory from 18 to 50 years of age. Education is free and compulsory. There are primary, higher, normal and technical schools and schools of law and medicine. Its mineral wealth includes gold, silver, iron, copper and mercury. Other productions are similar to those of the other republics. There are about 215 miles of steam railway.

CUBA.

Area: 44,125 square miles. **Population:** 2,898.905.
Population per square mile: 65.34.

Cuba was discovered by Columbus in 1492. The natives found called their home Kooba and although the natives themselves and all traces of them long since vanished the name has remained. Santiago and Trinidad were founded in 1514 and Havana in 1519. After having been under Spanish rule since its discovery, it became an independent republic in 1898 under the supervision of the United States. The executive, legislative and judiciary is similar to those of the United States. The chief cities are Havana, the capital, Santiago, Matanzas, Cienfuegos, Camaguey, Cardenas, Mazanilla, Batabano, Guatanamo, Holquin, Nuevitas, Trinidad, Santa Clara, Bahia and Rio are important seaports and trading centers. Cuba has an extensive coast line and possesses a number of good harbors. A chain of mountains traverses the island from southeast to northwest; 8,000 feet is the highest elevation. With about 200 rivers it is well watered. For the most part, except in the low lying districts, the climate is healthful. There are two seasons, the dry, from November to May, and the wet, from May to October. At the time Cuba was freed from Spanish rule 64 per cent of its people could not read. Since then the obligatory school laws are enforced and great improvement has been made. There is a university at Havana where the highest instruction is given and there are many institutes and colleges . Cuba's wealth lies in the great fertility of its soil and her favorable location. Sugar, coffee, cocoa, tobacco and cereals are abundantly grown. $65,000,000 worth of sugar and $32,000,000 worth of tobacco are exported yearly. Cattle raising is a very important industry and there is great wealth in forest lands, where the most valuable woods, gum, resins, and oils, as well as medicinal plants, are found. In the distrist of Santiago de Cuba mines of iron and copper are worked. There are 3,200 miles of steam railway, besides some private lines connecting sugar plantations with main lines. The World War brought great prosperity to Cuba. There are nearly 4,000,000 head of cattle, about 800,000 horses and over 70,000 mules. Forest wealth is very great; the island is rich in cabinet wood, mahogany and cedar being the most important. There are thirty-two species of palm; the cedar is used extensively for the manufacture of cigar boxes; all tropical fruits and most of those native in the temperate zone are freely raised. The Isle of Pines is included as part of Cuba. The United States government retained Guantanamo as a naval base at the time of setting up the Cuban Republic. Regular aerial mail service has been established between the United States and Cuba, which has become a popular winter resort for Americans. It is 11,639 square miles larger than Ireland.

WEST INDIES.

West Indies is the common name of the archipelago extending from the extremity of Florida to the northern coast of Venezuela. It includes the Bahama Islands, the Greater Antilles, the Virgin Islands, and the Lesser Antilles.

ANEGADA ISLAND.

Length: 10 miles. The northernmost of the British Virgin Islands.

ANGUILLA ISLAND.

Area: 35 square miles. Population: 4,075.
Population per square mile: 116.4.

Of Leeward Islands, British West Indies. Cotton, salt and phosphate of lime are principally produced, besides cattle and garden stock.

ANTIGUA ISLAND (Barbuda, Redonda).

Area: 170 square miles. Population: 32,209.
Population per square mile: 189.9. Capital: St. John.

Antigua, with Barbuda and Redonda as dependencies. Discovered by Columbus in 1493, and settled in 1632. It is the seat of government of the colony. Chief products, sugar, cotton and pineapples. It exports sugar, rum, molasses, tamarins, arrowroot and cotton.

BARBADOS ISLAND.

Area: 166 square miles. Population: 191,664.
Population per square mile: 1,100. Capital: Bridgetown, population: 16,648.

Colonized in 1625 by Great Britain. Chief exports are sugar, cotton, rum and molasses. Has 28 miles of railway.

CURACAO.

Area: 403 square miles. Population: 57,619.
Population per square mile: 142.9. Capital: Willemstad.

A Dutch colony, comprising all the Dutch Antilles. Settled by the Spanish in 1527, and was taken by the Dutch in 1634. The colony consists of the islands of Curacao, Bonaire, Aruba, south half of St. Martin, St. Eustache and Saba. Chief products are corn, beans, pulse, cattle, salt and phosphate of lime.

DOMINICA ISLAND.

Area: 305 square miles. Population: 40,270.
Population per square mile: 132. Capital: Roseau, population 7,000.

Belonging to Great Britain, is of volcanic origin, and was discovered by Columbus in 1493; was ceded by France to England in 1763. Chief products, sugar, coffee, fruit, cocoa and limes. It contains a Carib settlement with a population of about 400, the majority being of mixed negro blood, but about 100 are pure Caribs. It is very mountainous and picturesque, and abounds in rivulets well stocked with fish. Climate is healthy and the soil good.

GRENADA AND THE GRENADINES.

Area: 133 square miles. Population: 7,388.
Population per square mile: 572.9. Capital: St. Georges.

An island and a group of islands belonging to Great Britain, forming part of the Windward Islands. Colonized by the French in 1651; taken by the British in 1762. Of volcanic origin, abounding in streams, mineral and other springs. Climate is healthy, and the soil is very fertile. Products are cocoa, cotton, spices, sugar, nutmegs, rum and coffee. Fruit is also grown. Large numbers of turtles are caught and exported. The largest of the Grenadines is Carriacou. Area about 11 square miles, population 6,886.

GUADALOUPE ISLAND.

Area: 722 square miles. Population: 212,430.
Population per square mile: 303. Capital: Basse Terre, population 8,656.

Situated in the Lesser Antilles, consists of two islands, named Guadaloupe and Grand Terre, separated by a narrow channel; it has five dependencies, consisting of the smaller islands, Marie Galante, Les Saintes, Desirade, St. Bartholomew and Saint Martin. Discovered by Columbus in 1493, was colonized by the French in 1635. Several times taken by Great Britain, and was finally secured to France in 1815. The western island, Guadaloupe proper, is mountainous, but the eastern island, Grand Terre, is generally low. Point a Pitre has a fine harbor. Chief products are sugar, coffee, cocoa, and for local consumption there are grown bananas, sweet potatoes, manioc, tobacco, Indian corn and vegetables. There are forests of valuable timber, which is little worked.

HAITI.

Area: 10,204 square miles. Population: 2,500,000.
Population per square mile: 245. Capital, Port au Prince, population 120,000.

Formerly a French colony. Occupies the western half of the island of Haiti. Governed under a constitution ratified June 12, 1918. The executive is vested in a president, elected for 4 years. Exports chiefly cotton, coffee, sugar, mahogany and logwood. Haiti is a mountainous forest island. Mineral resources considerable, but undeveloped. In November, 1915, Haiti became a protectorate of the United States by joint treaty. There are 64 miles of railway in operation.

JAMAICA.

Area: 4,207 square miles. Population: 891,040.
Population per square mile: 212. Capital: Kingston, population, 57,379.

Is a colony of Great Britain, acquired in 1655. The chief articles of export, are sugar, rum, tobacco and fruit. It is the most important by far of the British West India Islands. Attached to it are the Turks and Caicos Islands. Grand Cayman Island, about 100 square miles. Population, 4,128. Capital, Georgetown, population 1,446. Little Cayman, about 12 square miles, population 136. Cayman Brac, about 12 square miles, population 1,300. Railway mileage, 200. Women were given the vote in 1919.

LEEWARD ISLANDS.

A British colony in the northern division of the Lesser Antilles, which comprises Antigua, Barbuda and Redonda, St. Christopher, Nevis, Montserrat, Anguilla and Dominica.

MARTINIQUE ISLAND.

Area: 385 square miles. Population: 194,000.
Population per square mile: 504. Capital: Fort de France

An island of the Lesser Antilles, a colony of France. Was discovered by Columbus in 1502, and in 1635 was colonized by the French. Inhabitants are chiefly negroes and half castes. The surface is mountainous; the leading products are sugar and cocoa. Coffee, cotton and tobacco are also produced. In 1902 occurred the eruption of Mont Pelee, destroying St. Pierre and about 30,900 inhabitants. Martinique has several good harbors, the best of which is at Fort de France.

MONTSERRAT ISLAND.

Area: 32 square miles. Population: 12,196.
Population per square mile: 381.

Discovered by Columbus in 1493; settled by the British in 1632; occupied temporarily by the French in 1664 and in 1782. Two-thirds of the surface is mountainous and barren, the rest is well cultivated. Chief products are cotton, sugar, lime-juice, cottonseed, cattle and papain. Chief town, Plymouth, population 1,911.

NEVIS ISLAND.

Area: 50 square miles. Population: 12,945.
Population per square mile: 259. Capital: Charlestown, population 912.

An island of the Lesser Antilles, colonized by the English in 1628. The surface is mountainous, and sugar is the chief product.

SAINT CHRISTOPHER ISLAND (St. Kitts).

Area: 65 square miles. Population: 26,283.
Population per square mile: 404.3. Capital: Basseterre, population, 8,159.

An island of the Lesser Antilles. This was the first of the West Indies settled by the French in 1625, but the English had a small colony there in 1623. Ceded to the English in 1713, taken by the French in 1782, but restored to Great Britain in 1783. It is traversed by mountains which rise to 4,110 feet above the sea. Chief products are sugar, rum, cotton and molasses. Sulphur is found in the mountains.

SAINT LUCIA ISLAND.

Area: 233 square miles. Population: 53,788.
Population per square mile: 233. Capital: Castries.

Was settled by the English in 1639; was several times held by the French, but permanently by the British since 1803. Its surface is mountainous and volcanic. Sugar, cocoa and rum are the chief products.

SAINT VINCENT ISLAND.

Area: 150 square miles. Population: 51,190.
Population per square mile: 304. Capital: Kingstown, population, 4,300.

Ceded by the French to the British in 1763. Its surface is mountainous, and in 1812 there was a volcanic eruption of Mt. Soufriere. Education is well advanced. Arrowroot, cotton, sugar, rum, cocoa and spices are produced. The sea island cotton grown is the best in the British Empire. The forests are extensive.

SANTO DOMINGO.

Area: 19,332 square miles. Population: 955,159.
Population per square mile: 53. Capital: Santo Domingo, population 26,812.

This republic is in the eastern part of the island of Haiti. The executive is vested in a president chosen for six years. There is a national congress of two houses chosen with restricted suffrage, for 6 years. Education is compulsory, and supported by state aid. There are primary, superior, technical and normal schools. Sugar growing is a flourishing industry. Cacao, coffee, tobacco, cotton, are also grown. Santo Domingo has 150 miles of railway. Since 1916 a military government of United States naval officers have been on the island.

SOMBRERO ISLAND.

A small island of Leeward group, governed with the British Virgin Islands.

TOBAGO ISLAND (With Trinidad).

Area: 114 square miles. Population: 18,750.
Population per square mile: 164.5.

Discovered by Columbus in 1498. Has been a British possession since 1763. The climate is unhealthful. The surface is in part mountainous, and has some productive soil. Sugar, rubber, coffee, cacao, tobacco and cotton are cultivated.

TRINIDAD ISLAND.

Area: 1860 square miles. Population: 381,309.
Population per square mile: 220. Capital: Port of Spain, population, 6,400.

Northeast of Venezuela. Discovered by Columbus in 1498, and taken by the British from the Spanish in 1797. The surface is varied, portions being mountainous. Chief products are sugar-cane, cacao, coffee, cocoanuts, rice and rubber. There is a large asphalt lake in the island. Oil is being exploited with satisfactory results. 108 miles of railway lines are in operation.

VIRGIN ISLANDS (British).

Thirty-two islands not owned by the United States. Principal islands: Tortala, Van Dyke, Guano, Great Camance, Scrub, Beef, Cooper, Salt, Peter, Norman and smaller, 58 square miles in all, with a population of 6,112. Cotton raising chief industry. Limes, sugar and cocoanuts are also produced. Capital, Roadtown; population 410, on Tortola. Occupied by peasant farmers.

SOUTH AMERICA

Area: 6,851,306 square miles. Population: 63,754,313.
Population per square mile: 9.3.

When, about four hundred years ago, the Spanish and Portuguese adventurers were exploring South America in their search for gold, they found there races of Indians in a high state of civilization who were traced back by their own legends to about 280 A. D. From what branch of the human family they were descended has never been satisfactorily explained. They could not endure the encroaching treatment of the Europeans and only traces of their intelligent civilization are found in worked out mines, and architectural ruins. The length from north to south of South America is over 4,600 miles and its extreme width 3,200. Like North America, it is broken by mountain chains, which extend the entire length, very near the western coast. The interior is a vast and fairly watered plain. The Andes which parallel the west coast, have many collateral ridges with wide valleys between them. They are superior to all other mountain heights, except the highest peaks in the Asiatic Himalayas. Their peaks are always snow covered, among them are active volcanoes. The highest peak is 23,000 feet. They present sharp cliffs and precipices, narrow passes and deep chasms. The plains or great basin areas cover nearly two-thirds its area. The rivers flowing into the Pacific are necessarily short and of no great volume. East of the mountains the vast plain contains three great rivers, the Orinoco, flowing 1,960 miles from its source to the Atlantic, the Amazon, flowing from the mountains of the west just south of the equator 3,270 miles and receiving in its course the waters of the Madeira, the Topajos, the Xinger, the Purus, the Jurus, Jutay, Javary, Rio Teodor (named in honor of its discoverer, Theodore Roosevelt), Ucayoli, Rio Negro, Japura, and Putumayo; all large and important streams; and the La Plata formed by a union of the Paraguay, Uruguay and Parana. The Amazon and the valley it drains are marvels among the physical features of the earth. The climate is tropical. The elevated table lands are more temperate and often delightful. In Brazil and Guiana the lowlands are very unhealthful. In the mountain region there is, of course, a range from extreme heat to continual snow. Of the inhabitants the natives are mainly Indians of mixed breeds, with scarcely anywhere a trace of the blood of the Incas or the Quichua. In the north and center are Caribs and Ges and in the south the Fuegans. In the densely settled areas there are mainly Europeans and Africans with some few Americans and all kinds of color and race mixture. The forms of government of the South American republics approximate that of the United States, modified to suit local conditions and racial characteristics, one of the most serious differences being that in South America state and church are united, Peru going so far as to prohibit the practice of any form of religion but the one prescribed by its constitution. In recent years the Pan-American movement has brought about a better understanding, aided by the building of the Panama Canal by the United States, and has greatly promoted friendly intercourse between the two Americas.

ARGENTINA.

Area: 1,153,119 square miles. Population: 8,279,159.
Population per square mile: 8.8. Capital: Buenos Aires, population, 1,650,000.

Argentine signifies "Land of Silver." It came into the possession of Spain as the La Plata Country in 1512. A few years later it was attached to Peru and remained so until 1776, when Buenos Aires separated from it. In 1810 a new government was formed but it was not until 1860 that the present republic was established. The president is the executive and is elected by representatives of the 14 provinces for 6 years. The legislative authority is vested in a national congress, consisting of a senate and house of deputies. The president and vice-president must be Roman Catholics and they cannot be re-elected for consecutive terms. The republic includes fourteen provinces and a large tract in the interior divided into territories. It has an extended sea coast, but few good harbors. The coastal plains are low, slowly rising toward the north and west. The western portion is broken by the Andes where rise many of the rivers In the northeast it is very fertile and in other sections where the soil is dry it supports vast herds of cattle, horses and sheep. The region formerly known as Patagonia is largely sterile and inhabited by uncivilized Indians. The chief rivers of Argentine are the Rio de la Plata and the Parana. There are many large lakes in the southern portion. There are extensive forests of valuable and medicinal woods in the north. Wild animals are common in the wilder parts. Except along the coast the climate is dry, tropical in the north and cold in the south. Argentine has the smallest number of native inhabitants of any South American country except Uruguay. For the most part the population is made up of Latin Americans, Italians, Spaniards, French predominating. These are from an emigration of 4¾ millions of Europeans since 1857. Education is well advanced. It is compulsory between 6 and 14 years of age. Besides the secondary and preparatory schools the government maintains 30 national colleges. There are 57 normal schools, 34 for special instruction, and there are national and provincial universities which comprise faculties of law, medicine and engineering. In the city of Buenos Aires there are many newspapers. Buenos Aires is the capital and most important city. It is supplied with all modern advantages and is one of the most cosmopolitan centers of the world. Corrientes, La Plata, Parana, Rosario, Sante Fe, Cordoba, Bahia Blanca, Mendoza, Salta, San Juan, San Luis and Tucuman are cities of wealth and importance. The republic stands high among the South American states in enterprise, progress and intelligence. At present, its chief wealth is in the immense herds of cattle, droves of horses and flocks of sheep spread over the extensive pampas. A very small per cent of its great area, 730 million acres, is under cultivation, yet the annual value of the agricultural yield is enormous. Over 5 million tons of wheat are produced annually. Rice, cotton, sugar, oats, tobacco, corn and fruits are in abundance; the most important manufactures are flouring mills, tobacco factories, cotton mills and weaving establishments, creameries and butter and cheese factories. Gold, silver and copper are extensively mined and there are lead, iron, coal and salt. The commercial possibilities of Argentina are unequaled. There are 22,578 miles of steam railway open. Trans-Andean travel has become of considerable importance.

BOLIVIA.

Area: 514,155 square miles. Population: 2,889,970.
Population per square mile: 5.6; Capital: La Paz, population, 100,000.

It was not until 1825 that Bolivia obtained freedom from Spanish domination and became a republic. Its early history is largely that of Peru and Colombia. The executive is a president, elected by direct vote of the people, for 4 years, and he is not eligible for re-election. The legislative power is in a senate and chamber of deputies, the former elected for 6 and the latter for 4 years. All citizens who can read and write have the right to vote. The eastern slope of the republic is an immense plain, most of which is a vast wilderness, fertile but sparsely inhabited. There are mountain ranges on its western side, reaching high elevations; the highest being 22,000 feet. Among these ranges is Lake Titicaca, the largest body of water in the Western Hemisphere at so high an elevation. Its waters do not reach the sea but are drained into salt marshes in the south. The climate is hot and unhealthful in the lowlands, but temperate and very salubrious in the elevated plains and lower mountain elevations. It is said that Bolivia has a greater proportion of people living beyond 100 years than any country in the world. The native Indians are greatly superior to the ordinary native races. The Indian population is about half, equaling all the white and mixed races. The majority of the people are engaged in agriculture. Public instruction is free and norminally obligatory. There are a number of universities and colleges and 19 establishments where instruction is given in law, medicine and theology . Military service is compulsory on all males between 20 and 50 years. Sucre is a beautiful city in the center of a valuable silver mining region; it was once the capital. La Paz, the present capital and chief city, is situated near Lake Titicaca, 12,195 feet above the sea. Potosi was once the center of the richest silver mining in the world. Cochabamba is in a fine agricultural district and is a growing city. Oruro is an important railroad terminus in a tin mining district. Santa Cruz is well situated and is growing rapidly. With enormous possibilities, agriculture is primitively conducted and is in a backward condition. A system of irrigation is greatly needed for the dry tracts. There are, nevertheless, nearly all kinds of cereals produced. Coffee and cocoa are largely exported, so also is rubber, cotton and medicinal herbs. Cattle and sheep are numerous. There are large mineral exports, including gold and silver. There are at present 1,700 miles of steam railway in the republic.

BRAZIL (United States of).

Area: 3,275,510 square miles. Population: 30,492,275.
Population per square mile: 9.3. Capital: Rio de Janeiro,
Population, estimated, 1,000,000.

In the year 1500 a Portuguese fleet took possession of the soil of what is now Brazil but it was not until the year 1549 that Bahia was founded and became the capital, which was afterwards changed to Rio de Janeiro. In 1822 Brazil declared itself an independent empire and Dom Pedro was declared emperor. In 1889 a revolution overthrew his son and successor who abdicated and Brazil became a republic known as the United States of Brazil. The president is elected for one 4 year term directly by the people. The legislative authority is in a congress, consisting of a senate and chamber of deputies, with the sanction of the president. In point of area Brazil is the fifth nation on the globe. From north to south it is 2,600 miles and from east to west 2,500. Much of its northern and western boundary line has never been explored. It contains three vast areas: The Brazilian plateau, comprising the coast and central mountain region; the Amazonian and Paraguay basins in the center, and a strip north of the Amazon, the southern extension of the Guiana plateau. Compared to the other republics the mountains are inconsiderable. Extending from Uruguay the coast Range terminates in many irregular spurs between Para and Pernambuco, from which place these ranges make the coast to Rio de Janeiro very beautiful. Their heights range from 5,000 to 9,000 feet. The Amazon river is a remarkable natural feature. Ocean vessels can ascend to Para and smaller steamers many miles further. It is more than 3,000 miles long and is four miles wide a thousand miles from the sea. Tide ascends 400 miles. There are no lakes worthy the name. One of the most awe-inspiring features is the boundless forests, which are estimated to cover a million and a half acres. Many of the woods therein are unknown in the north. There are medicinal, spice, dye and the choicest cabinet woods, trees bearing edible fruits and nuts; there are rubber trees and palms and every kind of tropical vine and plant. The climate is for the most part tropical, healthful along the coast wherever there are sanitary measures enforced. In the low interior parts there is some fever. About 40 per cent of the inhabitants are Italians. Portuguese and Spanish or their mixed descendants. About 20 per cent are negroes and their mixtures and the rest Indians. Of the latter there are in the interior many still uncivilized tribes. Education is free but not compulsory, and there is a good public school system. Throughout the republic there are 12,744 public schools and though there is no university in Brazil, there are 25 faculties that confer degrees. There are military schools and schools of art and for the blind and deaf and dumb. There are colleges of law, medicine and pharmacy; engineering, industrial and agricultural schools, generally supported by the separate states. Rio de Janeiro is the capital and largest commercial city of Brazil. It is one of the most beautiful cities of the world. It is a very busy shipping point and has manufactures of large importance. Bahia, the former capital, is the second city, and was for many years the principal whaling port in the world. Pernambuco is a city of commercial importance and is fancifully called the Venice of America. Belem, Porto Allegre, Manaos, Nictheroy, Maceio, Campinas, Ceara, Desterro, Ouro Preto, Para, Parahyba, Santos and Sao Paulo are other rich and growing cities. Agriculture is encouraged by the government. Coffee is the chief product; after that sugar, tobacco, cotton and tea. India rubber, cocoa, nuts and timber are valuable sources of revenue. There are vast numbers of cattle, horses, sheep and swine. Enormous wealth lies in the millions of acres of forests not yet penetrated. There are gold and diamond mines, mica, copper, platinum, crystal, agate and other valuable stones and coal in many places. There are cotton mills, woolen factories, silk mills, flour mills and breweries. The undeveloped resources of Brazil are immeasureable. There are about 19,000 miles of steam railway and over 3,000 miles in process of construction. Nealy 2,000 miles of railway are owned and operated by the government.

CHILE.

Area: 289,829 square miles. Population: 3,945,538.
Population per square mile: 13.6. Capital: Santiago,
population 415,641.

Chile origanally belonged to the Viceroyalty of Peru. It was one of the first South American countries to rebel against Spain, which it did in 1810 and secured independence in 1818. It extends from Peru to Cape Horn and is 2,200 miles long and about 100 wide. For the most part it is an inclined plain, rapidly sinking from the base of the mountains, which form the greater part of its eastern boundary, to the seashore of the Pacific. This plain is interspersed with foothills of the Andes. In the north there are mountain peaks from 14,000 to 23,000 feet high and the surface is generally bleak and sandy. This is the mining region. There are several volcanoes, some of which are active. There are many short rivers, from the mountains to the coast, some of which are navigable. Dense forests are spread over plain and mountain. The climate is one of the healthiest in the world; whether along the seashore or in the interior, the atmosphere is even, soft and delightful. A very hardy race of Indians are the principal native inhabitants. The majority of the population is of European origin. The president of the republic is elected for 5 years. Members of both branches of congress are elected for 3 years. There are hospitals and many charitable institutions; public instruction is free but not compulsory. The State pays for all. Professional and scientific instruction is furnished by two universities, and in colleges and lyceums, there are also mining and commercial schools, as well as many schools of industry. Santiago, the capital, was founded in 1541. It has many educational, benevolent and religious institutions, and many fine buildings. Valparaiso is the chief port. Chillan, Antofagasta, Vina del Mar, Curico, Temuco, Concepcion, Talcahuano, Copiapo, Coquimbo, Iquique, La Serena, Punta Arenas, San Carlos, San Fernando, Talca and Valdivia, are other important and rich cities. Wheat, nearly all cereals, tobacco, vegetables, fruits and sugar are raised in abundance. There are horses, cattle and sheep in great numbers. Manufacturing is confined mostly to flour, dairy products, wine making and brewing. There is some carriage and machinery making. The mines are very rich; gold, silver, copper and many other valuable minerals are freely mined and bring immense revenues. There are coal, iron, tin and lead mines. More than $10,000,000 worth of nitrate is exported yearly. There are 5,607 miles of steam railroad.

COLOMBIA (United States of).

Area: 440,846 square miles. Population: 5,472,604.
Population per square mile: 12.4. Capital: Bogota, population, 137,571.

Columbus discovered this territory on his third voyage in 1498 and in his honor it was named Colombia. It was a Viceroyalty of Spain until 1819, when it gained independence. Simon Bolivar was its first president and within the next six years he founded the governments of Peru and Bolivia. Out of the original Colombia the republics of Venezuela, Ecuador and New Grenada were formed in 1832. There were civil wars and insurrections almost constantly until 1886 when a new constitution fully established the present republic, from which Panama separated itself in 1903. On April 4, 1914, Colombia signed a treaty with the United States at Bogota, agreeing to recognize the independence of Panama and receiving in return 25 million dollars and certain rights in the Panama Canal Zone. It is the most northwesterly division of South America and is traversed by four mountain chains. There is a vast and very high table land which is fertile, cool and healthful. This region is very populous. Alternating with the high mountain chains are luxuriant valleys and plains. Along the coast are dense forests, and here fever prevails. The Magdalena, the Cauca, the Orinoco and the Amazon with their tributaries form the water system. There are very extensive forests of choice woods and nearly all kinds of minerals. Here are found birds of brilliant plumage. Colombia has been called the naturalist's paradise. The climate ranges from the mountain peaks, where there is perpetual snow, down the elevated plains where it is temperate and for the most part delightful, to the low bottom lands where the full heat of the tropics is found. The executive power is in a congress of two houses, the sena- the legislative in a congress of two houses, the senators elected for four years and the representatives for two years. The judiciary is in a supreme court and the ordinary lower courts; the judiciary of nearly all South American republics is much the same. Education is free but not compulsory. There are institutions of higher education. Medicine and natural sciences are taught in the higher institutions. Bogota, the capital, was founded in 1538. It has a good distributing trade. Cartagena, Barranquilla, Manizales, Bucaramanga, Cali, Chiquinquira, Medellin, Cucuta and Sorocco are important cities. Though the soil is fertile there is little of the country yet under cultivation. There is great lack of transportation and means of communication. Coffee is the staple product. Cotton and tobacco are grown, also sugar, cocoa and some wheat and corn. Rubber trees grow wild and are being cultivated. About 70 per cent of the coffee exported goes to the United States; most of the tobacco to Germany, and the cotton to London and France. There are about 800 miles of steam railroad. The interior roads are little more than simple mule tracks and much of the inland traffic is by river. Colombia is very rich in minerals; gold is found in every department. There are iron, copper, lead, platinum and emeralds. Extensive salt mines are monopolized by the government.

ECUADOR.

Area: 116,000 square miles. Population: 2,000,000.
Population per square mile: 17.
Capital, Quito. Population, 70,000.

Through a civil war, which divided the republic of Columbia, Ecuador was formed in the year 1830. Its executive is a president, elected for a term of four years, and the legislative is a congress of two houses; the senators are elected for a term of four years and the deputies elected for two years by citizens who can read and write. The election of the president takes place by a direct vote of the people. The three greatest mountain heights are Chimborazo, 20,498 feet. Cotopaxi, a celebrated volcano, 19,613 feet, and Tungaragua, 16,690 feet high. There are great table lands where the soil is very fertile and the climate delightful. There are numerous wild animals and sloths, bats, serpents, some venomous, besides countless insects, fish and birds. The Galapagos Islands, all of volcanic formation, about 700 miles off the coast, belong to Ecuador; their climate is very fine but they have but 200 inhabitants. Primary education is obligatory and free. There is a university in Quito, also one in Cuenca and Guayaquil. The staple product is cocoa; coffee also is quite freely grown. The rubber industry is an important one. Rubber trees are being extensively cultivated. Cotton and tobacco are grown to a large extent. Medicinal barks and herbs, alligator skins and cotton tree fibre are exported. Nearly all the so-called Panama hats are made in Ecuador. There are great resources in Ecuador and when it becomes more settled politically, when it pursues a more liberal policy, and when it fosters internal improvements, railroads and means of communication it will become a very wealthy and populous republic. There are about 400 miles or railroad in operation.

GUIANA, BRITISH.

Area: 89,480 square miles. Population: 311,000.
Population per square mile: 3.6. Capital: Georgetown,
population, 54,000.

A British colony, first settled by the Dutch in 1580; was acquired by the British in 1803, and was formally ceded to them in 1814. The leading product is sugar. Rich gold mines are worked in the western part. Climate is hot, rainfall heavy, but winds from the ocean have a moderating influence. 95 miles of railroads are open.

GUIANA, DUTCH, OR SURINAM.

Area: 46,060 square miles. Population: 107,827.
Population per square mile: 2.3. Capital: Paramaribo,
population, 36,726.

A Dutch colony, settled by the English in 1652; it was acquired by the Dutch in 1674 in exchange for their North American colonies. It was held by Great Britain from 1804 to 1814. Public schools are numerous, and there is one normal school. Chief products are sugar, cocoa, bananas, coffee, rice, corn, rum and molasses. Gold is mined in small quantities. About 100 miles of railway.

GUIANA, FRENCH, OR CAYENNE.

Area: 32,000 square miles. Population: 26,325.
Population per square mile: .85. Capital: Cayenne, population, 13,527.

It was settled by the French in 1626; was several times taken by the English and Dutch; and was held by the Portuguese 1809-17. Political prisoners were sent there during the French Revolution, and regular penal colonies were established in 1853. The climate of the coast is very unhealthy. There is little agriculture in the colony. The crops consist of rice, corn, manioc, cocoa, coffee, sugar-cane, indigo, tobacco and gutta percha. Education is well established. The most important industry is placer gold mining. Silver, iron and phosphates are also worked.

PANAMA.

Area: 32,380 square miles. Population: 450,000.
Population per square mile: 14.

Panama, formerly a department of Colombia, asserted its independence and became an independent republic in 1903. It elects a president every four years. Soon after its independence Panama made a treaty with the United States in which it granted in perpetuity a zone five miles wide on each side of the canal route, and within this zone the United States has the exclusive control of police, judiciary, sanitation and other purposes. Panama is about 480 miles long and between 37 and 110 miles wide. It forms the connecting strip between North and South America. Its population is of mixed races, Spanish, Indian and negro mostly. Panama is the capital. The city was founded in 1518. Colon, on the Atlantic coast, is also an important point. Education is of rather a primary character, but there are high and normal schools. The soil is of the greatest fertility and land is offered to small farmers on easy terms. Bananas are at present the most important product. The United States Fruit Company (A. U. S. Company) has large plantations and exports nearly a million dollars' worth of bananas yearly. Coffee and rubber are largely exported. Cocoanut industry adds largely to the wealth of the republic. Valuable woods and medicinal plants are found in abundance. Cattle raising is very profitable, hides being exported extensively. Panama is said to possess every mineral except coal. There are about 200 miles of railway. The gold balboa is equivalent to the American gold dollar; the fractional currency is the peso and fractions thereof. Two pesos equal an American dollar. There is no paper currency.

PARAGUAY.

Area: 65,000 square miles. Population: 1,000,000.
Population per square mile: 15.4. Capital: Ascunsion,
population, 101,790.

The republic of Paraguay threw off the Spanish yoke in 1811 and established its independence. Francia, the first president, made himself an autocratic dictator, more despotic than any sovereign, until 1840, when he fortunately died. After about 30 years of confusion, Paraguay settled down to a better condition of government in 1870. It is an interior republic, having no seacoast. There is a mountain chain which has considerable elevation in the north and south. The Parana and Paraguay are the two chief rivers. In the northern section are grassy plains dotted with palms. The southern section is one of the most fertile districts in the world. This section fully developed could support more people than any tract of equal extent in South America. The president is elected for four years, senators and deputies four years. There is a high court of justice, inferior courts and courts presided over by local magistrates. Education is free and compulsory. Asuncion, the capital, is the only very important city. Concepcion, Encarnacion, San Pedro, Lucue, Carapegua, Paraguari and Villa del Pilar are other promising towns. Cattle raising and agriculture are the principal industries. There are large numbers of horses, mules, sheep and swine. The exports are hides, dried beef, tobacco and medicinal plants. Sugar, cotton, coffee, rice, many cereals and all kinds of sub-tropical fruits are raised. The forests contain many rubber trees, dye woods and valuable gum trees. There are about 300 miles of steam railway. Interior roads are mere mule and bullock tracks, and transportation is very difficult.

PERU.

Area 722,461 square miles. Population: 5,000,000.
Population per square mile: 7. Capital: Lima, population, 150,000.

The early history of Peru is full of incident, intensely interesting and reads like a romance. After 289 years of the Spanish yoke, Peru declared its independence in 1821. Three years of war followed, but in 1824 Spain gave up the fight and Peru became an acknowledged republic. Its extreme length from north to south is 1,110 miles and its width varies from 100 to 700 miles. The Andes Mountains traverse the republic from north to south, parallel to and about 60 miles distant from the Pacific coast. There are high plateaus and valleys which are very fertile, and there are unwatered barrens. There are volcanoes and hot springs. There is a vast wilderness of tropical forests and there is a wealth of mines. The streams in the east are tributaries of the Amazon. In the west they flow but a short distance from mountain to sea. Along the coast the heat is modified by the sea winds, in the valleys it is very great, but on the elevated table lands it is cool all the year and very favorable to health. There is a president elected for 5 years, and a congress, consisting of a senate and house of representatives, elected every two years. Senators and representatives are elected by direct vote of the people. About fifteen per cent of the population are white, more than half the balance are Indian, and the others of mixed races. There are, besides, many uncivilized Indians whose numbers are unknown. Public instruction is free and compulsory. The law, however, in this respect is not enforced. High schools are maintained where a moderate fee is charged. In Lima there is a university and there are universities at Arequipa, Cuzco and Trujillo. There are several schools of science, as well as a military and naval school. Justice is administered by the courts common to the South American republics. Lima is the capital and principal city. It was founded by the adventurer Pizarro in 1538. Lima ranks high among the South American cities. It is subject to dangerous earthquakes. Callao is the principal seaport. It has a large export trade. Arequipa, Cerro de Pasco, Ayacucho, Huara, Huacho, Cuzco and Iquitos are all rich cities noted for mines and commerce. Cuzco was the original capital of the ancient Incas. Agriculture and mining are the principal industries. There is little manufacturng. Nearly all labor is performed by the Indians, who are indifferent laborers. There are vast mineral resources; gold, silver, copper and lead are largely exported. All the agricultural productions of temperate and tropical climes are produced in Peru. Coffee, sugar, cotton, cocoa, rice, tobacco and rubber are in abundance. Medicinal products of the forests are a source of great wealth. Cocaine is largely manufactured in Lima. Wool from the alpacas produces a large revenue. The great obstacle to commerce is the primitive means of communication. When this is overcome, there will be thousands of square miles of magnificently fertile lands opened up for colonization. Northern pep and enterprise are needed. The principal manufactures are cotton and woolen goods, gums and medicine. There are now about 2,000 miles of steam railroads.

URUGUAY.

Area: 72,153 square miles. Population: 1,429,585.
Population per square mile: 19.2. Capital: Montevideo,
population, 361,452.

Uruguay, once a Viceroyalty of Spain, and lately a dependency of Brazil, became an independent republic in 1828. The legislative power is in a parliament of two houses; senators are chosen by an electoral college and representatives by direct vote. The president is elected for four years. The judiciary is a high court of justice elected by the parliament, appeal courts, three courts for civil, criminal and commercial cases, departmental courts and smaller courts with magistrates presiding. The Atlantic Ocean, the Uruguay and the La Plata Rivers are the boundaries on three sides: Brazil being its boundary line on the northeast. The entire surface is a great plain, sparsely wooded. There are few elevations of more than 2,000 feet. The soil is very fertile and the climate mild and healthful; frosts are unknown, and the ocean breezes cool and equalize the temperature. Public schools are free and the attendance compulsory. There is a university and several minor colleges and schools of art and trade. Montevideo, the capital, is the chief city; its only imposing building is the cathedral. It has considerable shipping trade which might be easily increased. Other cities are Colonia, Paysandu, Mercedes, Salto and San Jose. Agricultural industries are being extended. All cereals common to temperate zones are raised. Wheat, wool and animal products are largely exported. Breeding stock is being introduced from Europe and Argentina. In the north there are gold, silver, copper and lead mines. There are about 1,700 miles of steam railway, mostly owned by British capital. Interior roads average better than those of most South American republics.

VENEZUELA (United States of).

Area: 398,594 square miles. Population: 2,844,618. Population per square mile: 7.1. Capital: Caracas, population, 90,000.

The Venezuelan coast was discovered by Columbus in 1498. Until 1819 it was a dependency of Spain, at which time a union was formed with Colombia (then New Grenada) and Ecuador. From this union Venezuela seceded in 1830 and the present republic was formed. Legislative authority is in a congress of two houses, and the executive in a president, elected by the congress for seven years. He must be a Venezuelan by birth and over 30 years old. It is the most northern republic of South America. There is a coast line of 1,584 miles. The surface consists of grassy plains, a high plateau in the south and the Andes in the west. The Orinoco is the principal river. Nearly all minerals are more or less abundant. The climate is tropical, subject to extremes of drought and moisture. Many of the Indians are still uncivilized. Scarcely one per cent are European born and the majority are mixed races. Justice courts are similar to those of the neighboring republics. Elementary education in the public schools is free and compulsory from seven to the completion of the primary grade. There are normal schools, colleges and universities. Caracas is the capital and chief city. It is the seat of the Central University. Valencia is the center of the coffee growing district. La Guaira is a port of entry. Barcelona, Barquisimeto, Carupano, Bolivar, Cumana, Maracaibo, Merida and Puerto Cabello are other important towns. In agricultural industry Venezuela ranks second to Brazil. It naturally divides into three zones, the agricultural, pastoral and the forest zone. In the first are sugar, coffee, cocoa, many cereals and fruits; the second is a vast cattle growing region, and in the third are rubber, gums, medicinal plants and fruits. Coffee, cocoa, rubber, hides, cattle and gold are exported. Agriculture, mining and commerce are handicapped by poor roads, which are common to all the South American republics. There is a total length of 533 miles of steam railway. Away from the limited railway service and the streams, traffic is for the most part carried on by pack mules and small mule carts.

EUROPE

Area: 3,754,282 square miles. Population: 484,118,769. Population per square mile: 129.

The period following the World War has been a time of great stress and upheaval in Europe, due to uncertainty as to war settlements, to readjustment of national boundaries, the creation of new nations, misunderstandings, jealousies and civil embroilments, the bolshevik experiment in Russia which threatened at times to involve all Europe, and other causes. America, during this period, and well over into 1921, had to contribute food to save the children of Central Europe from starvation. Depreciation of money values has wrought havoc with commerce.

The centuries-old proposition that war has been an instrument for human good and progress—a dictum of monarchs, and coupled always with the orthodox doctrine of the divine right of kings—seems about to be abandoned. Under the leadership of the United States a series of most promising efforts is under way to institute an international system of arbitration that will go far towards doing away with war altogether. Out of the proposed League of Nations as devised at Versailles, and the court of arbitration as tentatively organized by Elihu Root and representative jurists from other countries, there seems good reason to believe that there will develop an international understanding or league that will lead to some measure of disarmament and the permanent establishment of world-wide peace. The march of events in Russia, however, must be considered, and there are other sinister influences that may yet seriously change the present purposes of a war-sick world. The United States withdrew early in 1921 from the Reparations Commission.

Germany has been defeated. Helgoland and Kiel Canal fortifications have been dismantled and destroyed at German expense, her navy has been distributed, her merchant shipping divided among the Allies, and her air ships ordered not to go beyond her borders. Much of her territory has gone to France, Poland and Denmark, and France has the free use for fifteen years of her best coal regions, with a plebiscite to follow to determine whether that region shall go back to Germany or remain permanently French.

Austria, utterly prostrate, has been denied the right to become part of Germany, and exists in a condition of utter poverty, Hungary having elected to continue as a separate nation. Bohemia, Moravia, Slovakia and Ruthenia have become the new nation of Czechoslovakia, and Yugoslavia has been formed from Serbia, Croatia, Slavonia, Bosnia, Herzegovina, Dalmatia and Montenegro, with the Serbian King Peter on the throne. Poland takes her place as one of the great republics of Europe, made up of the provinces that were in former times taken from her by Russia, Germany and Austria, with permanent access to the Baltic at Danzig. Italy has recovered the territory of which Austria had despoiled her, and extended her domain on the northern and eastern shores of the Adriatic. Fiume has been created a neutral free state, as a way for Yugoslavia to the sea, somewhat similar to the Danzig outlet for Poland. Roumania has vastly expanded, and Bulgaria diminished in size. Greece has doubled in area, taking over nearly all of Turkey in Europe, a large territory around Smyrna, all the historic islands of the Ægean Sea, and Bulgarian and Turkish Thrace. But the recall of King Constantine to the Grecian throne is regarded unfavorably by the Allies, and may lose for her some of these gains.

The creation of the Danzig corridor, a strip of valuable territory extending from Poland proper to the Baltic at Danzig, separating East Prussia from the rest of Germany, and connecting Polish commerce with the outside world by sea, was one of the most radical acts of the Versailles Conference.

The Kiel Canal has been thrown open to the merchant shipping of the world. Lithuania, Latvia, Esthonia and Finland are new nations, sprung from the break-up of Russia, and Ukrainia seems to be emerging as a separate national entity. Siberia shows signs of independence also. Georgia and Azerbaijan are new republics on the Asian border.

The shores of the Dardanelles, the Sea of Marmora and Bosporus have become the "Zone of the Straits," governed by an Interallied Commission.

Though smallest, Europe is the most populous and powerful of the world's grand divisions. It excels in wealth, manufactures and commerce. Its greatest length, northeast to southwest, is 3,400 miles; greatest breadth, 2,430 miles. There are eight mountain ranges, none of which equals those of the Western Hemisphere, or the Asiatic heights. Mt. Blanc in the Alps attains an elevation of 15,781 feet. All the great rivers too, though navigable for considerable distances, are smaller than the principal ones of other continents. The chief lake region is in northwestern Russia, but the Swiss lakes are famed for their beauty. There are salt lakes around the Caspian Sea which are below sea level. About one-twentieth of the area is in islands, chief of which are the British Isles, Sicily, Corsica, Sardinia and the Balearic. The forests are less in extent than they were in former centuries. No other grand division enjoys a climate so equable. At all seasons the air is modified by the ocean winds and currents. Naturally the greatest extremes of heat and cold are found on the north and east borders. Along the Mediterranean the climate is sub-tropical. Of the inhabitants ten distinct races are represented in the present population, all of which will be separately considered. Generally speaking, education, except in elementary form, is not common among the masses of poorer people. The products and industries, as well as all details of description relating to the soil, resource, wealth and progress will be briefly noticed under the headings of the states and countries comprising Europe.

ALBANIA

Area, 11,317 square miles. Population, 1,000,000. Per square mile, 76. Capital, Durazzo. Retains pre-war size and independence.

Leading cities: Durazzo, 5,000; Scutari, 32,000; Elbasan, 13,000; Tirana, 12,000; Agyrocastro, 12,000; Berat, 8,500; Korytza, 8,500; Valona, 6,500.

A small mountainous district on the east shore of the Adriatic. The small part of the country that is under cultivation is farmed in a very primitive manner. Education very backward.

Albania was declared independent May 13, 1913, and on February 21, 1914, the crown was handed to Prince William of Wied, but soon after the declaration of war in 1914 this prince and his associates left Albania, and in 1916 the country was in Austrian hands. In June, 1917, the country was under Italian control. Italy made peace with Albania in 1920, but Yugoslavia and Greece were still pressing their claims for Albanian territory. These claims were later satisfactorily adjusted, and Albania retains her independence.

ALSACE-LORRAINE

A territory, formerly of Germany, and was under direct imperial government. It was acquired from the French by the treaty of 1871. Area 5,604 square miles. Population 1,717,451. It is a fertile and well timbered region, with great mineral wealth and active and varied manufactures. Capital, Strassbourg. Other important towns are Mulhausen, Metz and Colmar.

By the treaty of peace 1919 Alsace-Lorraine is restored to France and control of the Saar Basin will remain in French hands for 15 years.

Alsace-Lorraine have become districts of France under the names of Bas-Rhin Alsace, Moselle, Haut Rhin.

ANDORRA

Area: 175 square miles. Population: 5,231. Population per square mile: 30.

Andorra, a miniature republic, in the Pyrenees, between France and Spain, enclosed by mountains, is under the suzerainty of France and the Spanish Bishop of Urgel. The inhabitants are primitive, kindly and hospitable mountaineers. Its climate is cold, but healthy, and there are rich mines of iron and valuable forests. Oats and barley are the only crops. There are about twenty towns or hamlets. Andorra was declared a free state by Charlemagne in 790, in reward for services rendered to him by its inhabitants.

AUSTRIA (REPUBLIC OF)

The new republic of Austria is that part of the former Austro-Hungarian Empire occupied by the German speaking population. By special ruling of the Allies a union of this remnant of the old empire with the new German republic was forbidden, as was also the use of the name "German Austria."

Area of the new republic, about 33,000 square miles. Population (1920), 6,067,430.

The close of the war left present Austria prostrate in every sense of the word and a problem on the hands of the Allies. The former sources from which she derived her commanding influence have passed into other hands and she was left the "beggar" among European nations with little to look forward to. Vienna, the capital, metropolis and chief manufacturing city, was formerly one of the world's largest centers of life and culture.

Austria-Hungary declared war on Serbia July 28, 1914, ostensibly for the murder of Archduke Ferdinand and wife at Sarajevo, June 28, 1914, thus starting the greatest war in history.

BELGIUM

Area: 11,373 square miles. Population: 7,555,576. Population per square mile: 666.

Belgium remains unchanged by the war settlement with the exception of the addition of several hundred square miles of territory ceded by Germany and known as the Eupen and Malmedy districts, which were largely of Belgian population.

Formerly a part of the Netherlands, Belgium was formed into an independent Kingdom in 1830, by a provisional government that was created by a revolution which broke out at Brussels in 1830. At the signing of the Treaty of London, April 19, 1839, the new kingdom was recognized by all the States of Europe. A national congress elected the first king on June 4, 1831, Prince Leopold of Saxe-Coburg, who ascended the throne July 21, 1831. Belgium is a constitutional, representative and hereditary monarchy. The French and Flemish languages predominate, a great mass of the people speaking only one of the two. The chief agricultural products are rye, oats, wheat, potatoes, beets and barley in the order named. A large percentage of the people are employed in agricultural pursuits. The mining industry includes quarrying, metallic mines, iron ore, coal; and pig iron, steel ingots and steel rails are manufactured. Belgium leads in textile manufactures, notwithstanding that her factories were destroyed during the war and the machinery carried away. These machines were recovered after the war or replaced, and the country is again prosperous. Belgium is the most densely populated and one of the smallest of European states. The surface is generally flat in the center and toward the North Sea, and slightly hilly in the southeast. The principal rivers are the Meuse and Schelde. These, with their numerous affluents, give to Belgium the finest waterways of the continent. The climate in the plains of Flanders, near the sea, is cool, humid and unhealthy. In the southeast hot summers alternate with cold winters. Otherwise, the climate is favorable. The entire country resembles a great garden. Horses and cattle are of a superior quality. Vast herds of swine are raised. On October 13, 1914, the Belgian Government withdrew to Le Havre, in France, as all but a small portion of Belgium was occupied by Germany, in the European war of 1914. Brussels, the capital and most important city, ranks among the richest and finest of Europe. Adjacent to it is the famous Waterloo battlefield. Antwerp is the commercial center. Railroads from many European regions center here. It is strongly fortified and is an extensive silk manufacturing center. Ghent is on four navigable rivers, cut up by many canals and divided into twenty-six isles with 300 bridges. It is one of the greatest cotton manufacturing cities of the world. Louvain had many historic and beautiful buildings, cathedrals and universities, dating back to the fourteenth century, most of which were destroyed or damaged in the European War of 1914, and their priceless books and manuscripts destroyed or carried away. Louvain is to be rebuilt finer than ever, and much of the plundered contents restored. It would be an excellent extension of the principle of self-determination for all European nations to return art treasures forcibly taken from each other. Belgium has 5.401 miles of railway. Belgian Kongo was annexed to Belgium in 1907, and is its only colony.

Moresnet—Also called Kelmis. A town with a territory one and a half square miles on the border of Belgium and Prussia. It is an autonomous little Republic under the protection of the two states between which it is wedged. Population 3,500. To Belgium by treaty of peace 1919.

Eupen—A town of Rhenish Prussia, 10 miles southwest of Aix-la-Chapelle. It is a manufacturing city, population 14,297. To Belgium by treaty of peace 1919.

Malmedy—A town of Rhenish Prussia. Population 4,680, mostly Walloons engaged in the making of leather. To Belgium by treaty of peace 1919.

BULGARIA

After-the-war settlement with Bulgaria leaves its area somewhat reduced. Greece gained Bulgaria's Thracian sea coast, leaving her only outlet on her Black Sea front.

Area: 41,000 square miles. Population: 4,600,000. Population per square mile: 112.

Bulgaria declared her Independence of Turkey on October 5, 1908. September 30, 1912, Bulgaria allied with Serbia, Greece and Montenegro commenced war on Turkey, which was ended May 13, 1913, Turkey ceding to the allies all its European territory west of a line drawn from Midia on the Black Sea to Enos on the Ægian Sea, and also Crete. Owing to disagreements among the allies as to the division of the territory ceded to them, war broke out among the allies. On July 10, 1913, Roumania intervened to impose peace on the allies and to exact for herself from Bulgaria an extension of her frontier. The chief industry is agriculture, but it is in a very backward condition; herding is also important. Iron and coal are the chief minerals. Military service is universal and obligatory. Less than 30 per cent of the population can read and write. There are 1,384 miles of railroad open. England, France, Italy and Russia declared war on Bulgaria Oct. 15-19, 1915. The chief town is Sofia, the capital.

CZECHOSLOVAKIA

(The Czechoslovak Republic)

Four states—Bohemia, Moravia, Ruthenia and Slovakia—form this new republic. Slovakia was formerly part of Hungary, the other three of Austria. The people are of two branches of the same nations, about seven million Czechs in Bohemia, Moravia and Silesia and three million Slovaks. Added to these will be a considerable number of Germans (about 2½ million) mostly in Bohemia and Moravia. This gives the new republic a population of about 13 millions and an area approximating 60,000 square miles. The first president of the new republic is Thos. G. Masaryk, a Moravian. The capital is Prague in Bohemia. The people of this new republic are far above the average in habits of life and intelligence. The Czechoslovaks were an independent nation as far back as the fifth century (Bohemia). They suffered severely during the religious wars, being at the time very strongly protestant in their inclinations.

As part of the old Austria-Hungarian Empire the Czechs and Slovaks at first were by force of circumstances compelled to fight in the ranks of that empire, as were the Croats and Slovenes, their kindred in the south, but as soon as opportunity offered many of them passed over to the Russians and Italians and later on they performed conspicuous service on the side of the allies especially in the Russian and Asiatic districts where their service was of the highest value. The Czechoslovak army's great march through Russia and Siberia equalled in heroic spirit the march of Xenophon's ten thousand Greeks through Persia.

The new government assures universal suffrage, men and women equal in every political way. The church and state are separate, and the government recognizes the principles of initiative and referendum.

Education is very advanced, both in the common and higher branches.

In agricultural production great advance has been made during the last fifty years, and the lands adjacent to the great rivers (the Moravia, Dyje, Vetara, and Labe) are among the finest in Central Europe. Chief farm products are potatoes, wheat, beetroot, and hops. About 25% of the people follow agriculture as a living. The Bohemian, Moravian, and Ruthenian lands are well timbered, but Slovakia is more open, like the middle west in the United States.

In manufactures the country is well supplied. Sugar refineries, coal mines exist in numbers, and many other thriving industries. Gold, silver and some radium are produced.

The hope is well warranted that this new and cohesive nation is destined to a prosperous and continued existence among the most enlightened of nations.

CYPRUS

Area: 3,584 square miles. Population, 286,922. Population per square mile: 80. Capital: Nicosia.

The third largest island in the Mediterranean, and on the outbreak of hostilities between Great Britain and Turkey, was annexed by the former November 5, 1914. Education is well advanced. Cyprus is essentially agricultural. Chief products are wheat, barley, vetches, oats, olives and cotton. Grapes are produced in large quantities. Sponge fisheries are successfully carried on, over 150,000 sponges being fished annually. Gypsum, terra umbra and marble are found in abundance. There are 76 miles of railroad and 746 miles of good carriage road. The climate is generally healthy. Rich and abundant remains of antiquity have been discovered, having special importance as illustrating some stages of Grecian sculpture and kindred arts.

DANZIG

The "Free City of Danzig" is one of the creations of the war. This free city is under the guarantee of the League of Nations. Its creation was due to the desire to settle as soon as possible the claims of Poland and Germany. The former claiming historic rights and the latter the Germanic condition of the present population.

Danzig is within the Polish customs frontiers and Poland has the use of all docks and shipping facilities.

The population of the city proper was 182,468 which is somewhat augmented by the inclusion of adjacent territory to about 200,000. Area: 579 square miles.

DENMARK

Area: 17,144 square miles. Population: 3,289,195. Population per square mile: 192.

The crown of the kingdom of Denmark was made hereditary in 1660. In 1863 Frederick the Eighth died without direct heirs, upon which event, "to preserve the peace," the great European powers conferred the succession of the crown upon Prince Christian of Schleswig-Holstein and the direct male descendants of himself and Princess Louise of Hesse-Cassel, niece of King Christian the Eighth of Denmark. Denmark has a small percentage of illiteracy. The population is almost entirely Scandinavian. Education was made compulsory in 1814 between the ages of seven and fourteen. Every able bodied Danish subject must serve in the army, except those of Iceland and the Faroe Islands. The law of Denmark prohibits the building of large estates by the merging of smaller ones and encourages in every way the division of landed property into those of smaller area. About 80 per cent of the area is productive, of which about six per cent is wooded. Of the waste land (about 20 per cent of the whole) about one-sixth is in peat bogs. The leading crops are wheat, barley, oats, rye, potatoes and beetroot, and the farms support much live stock. The Danish fisheries are extensive. The climate is extremely humid and very temperate for so northerly a region. Rain and fogs are frequent. The summers are hot, the winters seldom severe. Denmark presents a low, flat surface and is nearly surrounded by water. Some of the northern parts are actually below sea level, being protected by dykes and embankments. Large rivers are absent, but lakes are numerous in Jutland and the larger islands, and there is an extensive canal system. The capital and chief city is Copenhagen, one of the most prosperous in Europe, with a superb harbor, strongly fortified. Denmark has 2,662 miles of railway. Danish colonies and possessions embrace Faroe Islands and Greenland. Denmark's West Indian possessions of the Virgin Islands, comprising St. Thomas, St. Croix, and St. John (area 132 sq. m.; pop. 26,051), sold to United States for $25,000,000 in 1917. Iceland was granted independence in 1918, with permanent neutrality guaranteed.

The area and population has been somewhat increased by the accession of part of Schleswig by plebiscite.

ESTHONIA

Esthonia was one of the provinces of Russia, in the Baltic region. It is now an independent republic, and is ruled by a constitutional assembly. The capital is Reval. It has an area of 23,160 square miles, and a population of about 1,750,000. The chief exports are timber, flax, cellulose and meat.

FINLAND

This new republic is in the extreme northern part of Europe. Was proclaimed on December 6th, 1917, an independent state and so accepted by all the leading nations. Both men and women over 24 years of age vote. Area is about 148,000 square miles. Population about 3½ million. About 11 per cent of the area is in lakes. Education is very general. Forestry forms the main industry and supplies the chief income of the people, as more than 50 per cent of the area is covered by spruce and pine forests. Wheat, rye, flax, potatoes and hemp are raised. Pig iron, iron ore and bar iron are produced. Ethnographically the Finns are kindred to the Magyars of Hungary. In their habits of life and industry they are among the leading people of Europe.

FIUME

Fiume is an independent state created by the Treaty of Rapallo, signed between Italy and the kingdom of Yugoslavia. By Article 4 of the treaty the contracting powers recognize the independence of Fiume in perpetuity. The treaty has been duly ratified. The Treaty of London granted Italy a large area of continental Dalmatia. Difficulties rose between the Italians and the Yugoslavs as to Italy's share, and the difficulties were complicated by the action of the poet D'Annunzio in seizing Fiume and annexing it to Italy. The difficulties were, however, solved by the Treaty of Rapallo. A further agreement was arrived at between the Free City, Italy, and Yugoslavia in reference to the port of Fiume, which includes the port of Barros, according to which equal rights are granted to the three parties concerned. The area of the new state is given as 8 sq. miles, and the population as 49,806.

FRANCE

Area: 212,654 square miles. Population: about 40 millions. Population per square mile: 195.6.

As a result of the tremendous sacrifices of France the population has undoubtedly decreased. This has been counterbalanced by the restoration of Alsace-Lorraine with a population of about 1,900,000 and an area of 5,604 square miles. Control of the Saar basin will be in French hands for a term of 15 years, and Germany has ceded all of her colonies to the Allies, parts of which have gone to France.

The peace of France is assured by the restrictions placed on Germany's military power, by the accession of Alsace-Lorraine, the neutral zone on the Rhine, and the establishment of international peace league and court of arbitration.

France, or "Gaul," was largely peopled from Italy and annexed to Rome 48 B. C., but later it fell into the hands of the Goths, Burgundians and Franks. The monarchy was founded by Clovis, who defeated the Romans at Soissons in 492. Soon after, 800 A. D., when Charlemagne reigned as emperor, the Normans and Danes ravaged the land and the foundation of the Norman power was laid in 900. The first Republic began in 1792. Napoleon, the First, was made consul in 1799 and emperor in 1804. The restoration occurred in 1814, the second Republic 1848, the last Empire (Napoleon, the Third) in 1852, the third Republic 1870. The president is elected for seven years.

The coast line of France is 1,760 miles long, two-thirds of it on the Atlantic and one-third on the Mediterranean Sea. The eastern portion of France is hilly and mountainous, while in the west three valleys slope to the Atlantic. The chief rivers are the Seine, Loire, Garonne and Rhone; leading forests Ardennes, Argonne, Compeigne, Fontainebleau and Orleans. The Pyrenees Mountains separate France and Spain, the Ceveness and Vosges Mountains form the Franco-Swiss-German line. The northwestern coast is irregular, with numerous bays. The west-southwest coast is mostly precipitous and shelving. The Mediterranean coast is low and broken by lagoons. The climate of France is temperate and healthful, being slightly warmer in the southeast and cooler in the north.

About two-thirds of the people live in the rural districts or towns of less than 10,000 population. Agriculture is the chief industry. Silk culture is extensively followed. The annual yield of mines is about $130,000,000. Leading minerals: coal, lignite and iron. The manufacturing occupations in order of importance are: clothing, woodworking, building, etc., leather work, foundry work, iron work, sugar works; silk, wool, textile, linen and lace industry; pottery and fisheries. The state now recognizes no religion, as a law was passed in 1905 separating church and state. Education is compulsory between the ages of six and thirteen years. Education is at a high standard and is furthered by the state by improved facilities and greater educational freedom. In art, science, literature and industry the French have set the pace for Europe since the dark ages, and are admittedly the most cultured nation.

The French frontiers extend about 1,575 miles, of which 419 bound Spain and the remainder Germany, Belgium, Switzerland and Italy, and are dotted with many fortified places. Paris is surrounded by a wall with many forts and batteries. The army service is compulsory, only physical disability being an excuse for non-service. In the European war of 1914-18 Germany occupied a part of northern France as far as Soissons. The French navy is formidable and is being constantly improved. The railway mileage of France is about 25,472. Germany declared war on France Aug. 3, 1914; France declared war on Austria Aug. 10, 1914; on Bulgaria, Oct. 15, 1915. The local vehicle roads are excellent, probably not surpassed by those of any country. Throughout France, and even on the great Simplon highway across the Alps, there is no grade steeper than a rise of one foot in twenty. Colonies and affiliated lands: Andorra: A republic under the joint care of France and the Spanish Bishop of Urgel. French colonies and dependencies have an estimated area of over four million square miles with about 41 million people. French India, Cambodia, Laos, Cochin-China, Annam, Tonking in Asia, Sahara, Algeria, Tunis, Senegal, Upper Senegal and Niger, Ivory Coast, Mauritania, French Equatorial Africa, Reunion, Mayotte, Somali Coast, Guinea, Dahomey, Madagascar in Africa; St. Pierre and Miquelon, Gaudeloupe, Martinique and Guiana in North and South America; New Caledonia and Tahiti, etc., in Oceania. France's possessions in Africa alone are twenty times as great in area as the home country, without reckoning in her interest in Kamerum and Southwest Africa, conquered jointly with Great Britain.

Leading cities: Paris, the capital, is next to London, the greatest European city in population and wealth, and follows New York among the world's cities. Its decrees of fashion are copied worldwide. Lyon is the chief seat of silk manufacture and the great center of the south of France. Marseilles is the largest seaport, with a harbor capable of floating hundreds of vessels. Its beginning was a Greek colony from Asia, about 600 B. C. Bordeaux is the chief center of the iron trade, and was the seat of the government from September 3 to December 9, 1914. Other important cities are Lille, Nantes, Toulouse, St. Etienne, Nice, Le Havre, Rouen, Roubaix, Nancy, Reims, Toulon, Amiens, Calais, Versailles and Dunkirk.

GERMANY

Area: 183,381 English Square Miles. Population: 59,857,283.
Population per square mile: 329

The German Republic became a fact on the abdication of Wilhelm the Second, on November 9th, 1918.

Under the Council of Peoples Commissioners in Berlin' the Imperial Parliament was dissolved, reigning princes of the Federal States abdicated or were deposed and a National Assembly was summoned.

The election for the body, for which all Germans, men and women over 20 years old voted, was held in January, 1919. The National Assembly on February 11th, 1919, elected Friederich Ebert as the first President of the Republic.

The President receives 100,000 marks per annum, is given an additional allowance of 100,000 marks yearly and is elected for 7 years. Future Presidents will be elected by direct vote of all citizens who are 20 years of age or over.

As a result of the war Germany lost all of its colonies, and portions of its European areas, including Alsace-Lorraine to France, Eupen and Malmedy districts to Belgium, part of East Prussia to Poland, Memel, under International control, Danzig, which became a free city, part of Schleswig to Denmark, and a small area to Czechoslovakia. The Saar Basin is placed under the League of Nations, with provision for a plebiscite after 15 years.

The laws of Germany provide for entire liberty of conscience and complete social equality among all religious denominations. There is no State Church. About two-thirds of the population are Protestants. Roman Catholics about one-third, and more largely centered in Bavaria and Baden. Alsace-Lorraine and the territory lost to Poland were largely Roman Catholic.

Education is very general and compulsory. Laws provide for elementary schools in every town and village, and children between the ages of 6 and 14 must attend these or other schools. Above the elementary schools are middle schools, children may continue their studies at the continuation schools, in the evening or at other convenient time. The Gymnasien, prepare pupils in nine years for university attendance. Facilities for education of every nature are well provided throughout the Republic.

Germany has uniform codes of commercial and criminal law. Judges are appointed by the State and not by the Central Government, and all courts are subject to the state in which they preside.

Social insurance has been compulsory since 1880, against accidents, sickness and old age and infirmity of workmen.

During January, 1919, the existing army was disbanded and replaced by a provisional National Defence Army, pending the creation of a permanent Defence Force. In January, 1921, the Reichswehr was reduced to its authorized establishment of 100,000 men. The total personnel of the navy equals about 15,000, but there are no modern vessels of war remaining under the German flag.

The subdivision of the soil is about as follows: Acres: arable land, 65,148,000; grass meadows, pasture, 21,760,500; vineyards, 296,500; woods and forests, 35,558,000; all others 12,811,500.

Number of farms or enclosures cultivated by one household about 5,750,000, averaging about 13.5 acres each. Principal products, potatoes, hay, rye, beets, oats, barley, wheat.

Live stock census in December, 1920, showed a total of 4,458,422, an increase of over 300,000 during the preceding year.

Forestry is very important. Area of 35,552,930 acres.

Minerals of Germany are produced chiefly in Prussia. Principal minerals are coal, lignite, iron and zinc ore, copper ore, rock salt, and potash. Output of pig iron in 1913, 16,763,809 tons; in 1919, 6,731,699 tons.

It is customary to date the beginning of the German Empire from the time of Charlemagne, who reigned during the close of the eighth and the commencement of the ninth centuries, but this is hardly correct, for Charlemagne brought under one empire what are now the states of Italy, France and Germany; the division of these states having been made by his three sons.

The government under Wilhelm 2nd was a constitutional monarchy of the Confederated German states; Wilhelm 2nd, hereditary king of Prussia, having the title of Emperor of Germany.

Germany is well watered with many rivers and smaller streams and there is an abundance of lakes in the southern part.

The climate is cold, often rigorous in the northern part, but warm and healthful in the southern. The coldest region is the northeast and warmest, the southwest. The people of the different German states are the descendants of various tribes and branches.

Wine, beer, beet sugar and liquors are exported. Brewing, spinning, weaving, and wood carving have been national occupations from antiquity. All kinds of linen, cotton, woolen and silk goods, glass, porcelain, cutlery, clocks, jewelry, and notions are manufactured and exported. Steel is made in Prussia.

The former empire included Alsace-Lorraine, Anhalt, Baden, Bavaria, Bremen, Brunswick, Hamburg, Hesse, Lippe, Lubeck, Mecklenburg-Strelitz, Mecklenberg-Schwerin, Oldenburg, Prussia, Reuss-Elder Branch, Reuss Younger Branch, Saxe-Coburg-Gotha, Saxe-Meiningen, Saxony, Schaumburg-Lippe, Schwartzburg-Rudalstadt, Schwartzburg-Sondershausen, Waldeck and Wurttemberg.

Railways to the extent of 38,809 miles.

GIBRALTAR

Area: 2 square miles. Population: 18,448.
Population per square mile: 9,224. Capital: Gibraltar.

Gibraltar is a naval base and position of strategic importance, although modern methods of warfare have greatly lessened its importance. There is a deep harbor of 260 acres; Belongs to Great Britain. It was classical Calpe, and one of the pillars of Hercules.

GREAT BRITAIN AND IRELAND

(United Kingdom)

Area: 121,633 square miles. Population: 45,569,259.
Population per square mile: 373.

The end of the great war finds the position of Great Britain greatly enhanced as a world power. It is true that the United Kingdom is responsible for a tremendous debt, the greatest in the history of any nation, but conditions of advantage help to offset this. The threat of the German navy has vanished, and leaves the island kingdom without fear of loss of her historic supremacy. Then there has been large accession of colonies in Africa, as the major portions of all former German possessions pass title to Great Britain. Roughly estimated the increase in colonial area is about two and one half million square miles. Add this to the pre-war conditions shown below and a good idea of the present great responsibilities of the empire will be had. One of her statesmen has stated that the empire is in reality a minor league of nations.

England's sacrifice in men and treasure in the great war was tremendous. Her control of the sea, combined with the assistance of the American and French navies, made final victory possible.

The history of the British Islands begins at too early a period to be within the scope of these descriptions. From the Scots and Picts, the Saxons and Angles, the Danes and the Normans, we find this island group in the twentieth century occupying a position and exercising a control over the affairs of the world little dreamed of by the civilized peoples at the beginning of the Christian era. It was not until 1801 that all the British Islands were united under the one government. Whatever may be said of the motive that inspired the wars Great Britain has undertaken during the nineteenth century, it must be admitted this government has opened immense fields for settlement and enterprise, and given a great impetus to the spread of civilization. In learning, in wealth, in energy, in commerce, and in manufacturing, Great Britain stands among the leading nations. The British Islands (England and Wales, Scotland and Ireland) lie between the 49th and 61st degrees of north latitude, and 2nd degree of east and 11th degree of west longitude. Scotland, the most northerly part of the islands, is naturally poor north of the Clyde, but is inhabited by thrifty and energetic people. It is famed for beautiful lakes and fine scenery. Ireland, about 60 miles west of England, is a fertile island with a few low hills. Its fine lakes are chief among the attractions. The climate is even and the moist air produces such vivid verdure that it is called the Emerald Isle. The British Government is a constitutional monarchy. There is a hereditary king, a house of lords and a house of commons, whose joint approval is necessary to all legislation. The British courts are famous for their independence, erudition, fairness, and prompt administration of justice. The old red tape and maze of precedents have small consideration in modern British courts. England has 50 administrative counties, Wales 12, Scotland 33 and Ireland 38. Parliament is the highest legislative tribunal; its powers extending to civil, ecclesiastical, temporal and military affairs. Education is very advanced in England and the colleges and universities are well known. The supremacy of English commerce is of comparatively recent times. Until the reign of Queen Elizabeth the trade of the country had been almost wholly in the hands of foreigners. The Levant Company, and the East India Company, extended their operations into the East, while the Virginia Company, Bermuda Company and the Hudson Bay Company, and a number of other companies, turned to the then newly discovered lands of the West, and were influential factors in the establishment of colonies. Thus began the transformation of a small European country into a vast world empire. London, the capital, is the largest city in the world, and a center of the world's trade and wealth. Liverpool, the second city of Great Britain, is the chief maritime city of Europe. Other great cities of England are Leeds, Bristol, Bradford, Nottingham, Salford, Manchester and Hull. There are over 20 other cities in England with a population of from 75,000 to 200,000. Edinburgh, the old capital of Scotland, is noted for its educational institutions. Glasgow, Aberdeen, Greenock, Leith and Paisley are other wealthy Scotch cities. For the products of loom and forge, mine and factory, Great Britain holds front rank. There are 28,718 miles of steam railways, and 492 miles of electric railways. In Ireland, Dublin is the capital and principal city. It has extensive manufactories. Belfast, Cork, Limerick, Londonderry and Waterford are other large cities.

On Aug. 4, 1914, England declared war on Germany; Aug. 12, on Austria; Nov. 5, on Turkey, Oct. 15, 1915, on Bulgaria.

IRELAND

Irish Free State and Northern Ireland

To end the disturbances and distressing political conditions existing between Great Britain and Ireland an act was passed by Great Britain in 1920. Separate Parliaments were set up for Southern Ireland (26 counties) and Northern Ireland (6 counties). The two bodies to choose a joint "Council of Ireland" of 40 members as a connecting link. The Ulster Unionists accepted and their Parliament was elected May 24, 1921, and opened by the King in person in the following June.

The Sinn Fein refused to accept the act and their chosen members met in Dublin Mansion House and again proclaimed a Republic. The British Government declared the Irish Parliament illegal, made arrests, seized books and property of the Sinn Fein, which in its turn formed a body called the Irish Republican Army, and carried on guerrilla fighting of violent nature. Finally, each side appointed a delegation to settle affairs, and later articles were adopted by both sides. Ireland is to have a Self Governing Dominion the same as that of Canada. The Free State to take care of its own coast defense, but to depend by sea on the power of the Imperial forces.

Northern Ireland (Down, Antrim, Londonderry, Armagh, Tyrone and Fermanagh) maintains its separate existence. Its Parliament first met in June, 1921, formed a ministry and received powers from the Imperial Government for its local functions. The powers are wholly domestic. It remains as before in its relations to the empire, but independent of the Free State of Ireland.

GREECE

Area: 41,933 square miles. Population: about 9,000,000.
Population per square mile: 104.

The expansion of Greece after the war has increased her area to a great extent and the population to about 8 to 9 million.

The final participation of Greece on the side of the Allies was due to the popular sentiment aroused by Venezilos, one of the most admired public men produced by the war. The king leaned toward an alliance with the German-Austrian combination, but his final resignation paved the way to the entrance on the allied side. The fate of other small nations and the inability of the Allies to assure the proper help were also factors leading to the natural hesitancy of Greece.

Following is a pre-war description:

Greece was a kingdom under the protection of England, France and Russia, but late in 1915, when these powers called upon it for aid in the Balkans against the Germans, Greece refused to be drawn into the war, choosing rather to be neutral, notwithstanding its alliance with Serbia. The government is a constitutional monarchy. The legislative power is in one house called the "Bule," consisting of 184 representatives. Greece is situated in the south of Europe and is nearly all mountainous. It has a magnificent climate; frost and snow are seldom seen. The inhabitants are descendants of the original Hellenic race, with admixtures of Slavs, Albanians and Italians. School attendance is compulsory on all children between five and twelve years, but the law is not enforced. About 86 per cent of the males can read and write. There are normal schools, private schools, agricultural and trade schools, gymnasiums and universities. Athens is the capital and chief city. Its attractions are its antiquities and ruins of magnificent palaces and temples. It has considerable commerce and some manufactures. Notwithstanding the mountainous character of the country, agriculture is the principal industry. There are small streams and many valleys which are made fertile by irrigation. All cereals are raised, and olives, grapes, tobacco and cotton are important products. Sheep and goats swarm about everywhere, many in a half wild state. Iron, lead and zinc are mined. The lands are for the most part in the hands of small farmers. The most favored and best cultivated crop is the currant, which covers vast districts. The yield for the last reported year was 160,000 tons. There is some silk culture. About 5,000,000 gallons of wine and nearly 4,000,000 gallons of olive oil are exported. Sponges are exported in large quantities. There are 1,365 miles of steam railway, 3,000 miles of interior roads, and a canal across the Isthmus of Corinth.

Mount Athos is inhabited by the monks of the Greek, Russian, Bulgarian and Serbian monasteries and hermitages. They till the fields, tend the vineyards, harvest, fish, weave, sell in shops, and take upon themselves all the secular duties of the community as well as the sacred. Founded by Peter the Athonite, it has grown to a colony of thousands. At present each of the 20 monasteries is a sort of little republic in itself, some being administered by abbots chosen for life, others by a board of overseers elected for a certain term of years. The independent administration of Mount Athos has been respected by the Greeks and will continue to be protected by them.

Crete was under Venetian rule from 1211 to 1669, when it fell into the hands of the Turks, and was governed by them as a vilayet. Great Britain, Russia, France and Italy intervened to quell insurrections in 1898 and it was constituted an autonomous state, subject to Turkey, but paying no tribute. In 1906 the Greeks took over the administration of affairs, and in 1908 it was annexed to Greece. On November 1, 1913, Turkey and the powers recognized Crete as part of the Grecian kingdom.

HUNGARY
(Regency)

The formation of the Hungarian Republic began November 16, 1918, with Count Michael Karolyi as provisional president, as King Karl had abdicated 3 days before. The provisional national assembly was pledged to provide for universal suffrage, secret ballot, jury system and final distribution of the land among the peasants.

Count Karolyi resigned March 22, 1919, on receipt of a note from the allies concerning the boundary between Hungary and Rumania. Then followed a bolshevist regime and later a new republic was set up.

The area of the Hungarian Republic has been reduced from 125,000 to 36,000 square miles, and its population from 20,000,000 to 8,000.000. the lost territory and population going to Rumania, Yugoslavia and Czechoslovakia. Roumanians took Budapest, then retired, stripping the land. The country was then governed by a regency, and continues in an unstable condition.

ITALY

Area: 117,982. Population: 40,070,161.
Population per square mile: 331.

The area and population of Italy was considerably increased by the addition of former Austrian territory. The added population is very largely of a Germanic nature and constitutes the only considerable element of Italy now using a foreign language, as the great mass of the population is Italian in descent and speech.

The prevailing religion is Roman Catholic and the nation is almost solidly devoted to that church. Freedom of worship is granted to all recognized religions.

Public instruction is regulated by the state, and schools of every class are maintained. In Piedmont a percentage of 9:1 were illiterate among the male and 12:8 among the female, the most favorable showing in the kingdom. The greatest illiteracy is in Calabria, about 70%.

The present government is a constitutional monarchy. The legislative authority rests conjointly in the king and a parliament of two houses, a senate and lower house. The senate is composed of princes of the royal house, and the lower house of deputies elected by ballot of the people, but no citizen can vote except he be 21 years of age, can read and write, and pays taxes to the amount of 20 lire. Italy consists of a peninsula in the south of Europe, the large islands of Sicily, Sardinia and Elba, and about sixty-six other smaller islands and since the great war has added to her domain the Trentino region, Gorizia and the Iotrian peninsula, Trieste, and some of the eastern Adriatic littoral, in all 15,000 to 18,000 square miles, with about 2,000,000 population. The Apennines traverse its length from north to south, and the Alps separate it from France. The fertile plains of Lombardy are in the north. Some gold is found in the Alps and silver in Sardinia. Iron, zinc, copper, galena, antimony, etc., are among the principal minerals. Italy is celebrated for its climate, but this we should say relates more to its winters, which are ideal, rather than to the summers which are hot and stormy. In the west along the coast regions and north of Venice there are unhealthy marshes. There is a great deal of race mixture, which may be traced to the old days of the Roman slave trade. Unity of language, however, is very noticeable. Justice is rendered by the Pretori, the Tribunals, Courts of Assize, Courts of Appeals, and the Court of Cassation. Public schools are regulated by the state and attendance is compulsory on all children between six and twelve years of age. The law, however, is not enfocred. There are 22 universities, 35 schools of agriculture, 509 industrial and commercial schools, 13 government fine art institutes, and many other institutions of higher education. Naples, the largest city, is built on a beautiful bay of the same name and is well known to tourists. Milan is a historic city with fine old structures. It was here that Napoleon was crowned King of Italy in 1805. Rome, whose influence has extended over the entire world, contains the most magnificent cathedrals and palaces in the world, as well as the ruins and relics of a grandeur as yet unequaled in modern times. Turin, Palermo, Genoa, Florence and Venice are other well known cities, all renowned in history; the latter being built on seventy small islands between which are canals used as streets, on which gondolas carry passenger from one part of the city to another. The principal industry is agriculture. Cereals are cultivated in the north, and orange and olive groves and vineyards cover large sections in the south. The silk worm is extensively cultivated. Tropical fruits and nuts grow in abundance and are largely exported. Sardine and sea fisheries are profitable industries. Fine marble is quarried, and there are many manufactures of woolen, cotton, silk, hemp and linen fabrics, leather, machinery and many other commodities which are exported. The Italian seldom forms attachment for any other land and emigrants are continually returning. Service in the army or navy is compulsory for a period of 19 years, commencing at the age of 20 years. There are 11,165 miles of steam railways; 8,540 miles belonging to the state. Foreign dependencies of Italy are Eritrea, Somaliland, Tripoli and Cyrenaica, all in Africa. May 23, 1915, Italy entered the great war against the central powers. The war has resulted in extending her colonial possessions.

JUGO-SLAVIA (YUGOSLAVIA)

Area: 95,628 square miles. Population: 11,337,686.
Population per square mile: 141.8.

The Jugo-Slav (Yugoslavia) kingdom or the "Kingdom of the Serbs, Croats and Slovenes," comprises former Serbia, Croatia, Slavonia, Dalmatia, Bosnia-Herzegovina and Montenegro. Excepting Serbia and Montenegro all this territory once formed part of the former Austro-Hungarian empire, and like their northern kindred, the Czecho Slavs, the people were at first forced into the armies of the dual empire, but passed over to the side with which their sympathy lay at the first opportunity.

In Bosnia, at Sarajevo, the act was committeed that was taken as a pretext for starting the great war, when Archduke Franz Ferdinand and wife were assassinated. Belgrade in Serbia witnessed the opening of the war, and the heroic defence of the Serbs against Austrian attacks. Later on the country was conquered by the more efficient Germans, and great destitution and sacrifice was the lot of the desperate Serbians. It is doubtful if any nation lost as much as Serbia in proportion to size.

The Yugoslavs form the chief bulk of the present population of the Balkan Peninsula. They are close kin both as to language and derivation, and differences in language and habits are chiefly local.

LATVIA

Latvia was formerly the Russian province of Courland, with parts of Livonia and Vitebsk. It declared its independence in November, 1918, and elected an assembly in April, 1920, of 150 members, and a state council of 102 members. Area: 24,440 square miles. Population: 2,500,000. Riga is the chief city and capital of the republic.

LIECHTENSTEIN

Area: 65 square miles. Population: 10,716.
Population per square mile: 165. Capital: Vaduz.

A small state lying between the Austrian Tyrol and the Rhine. The population is Germanic; chiefly agricultural; products are corn, wine, fruit and timber.

LITHUANIA

A former province of Russia, Lithuania is now a republic, proclaimed such on Nov. 30, 1918. Elected a president and assembly on April 4, 1919. Vilnius is the Capital. **Area:** 59,633 square miles. Population: 4,800,000.

LUXEMBURG

Area: 998 square miles. Population: 259,891.
Population per square mile: 261.

As a grand duchy, and from 1818 to 1866, was a partner in the then dissolved Germanic Confederation, but in 1867 was declared by the Treaty of London to be a neutral territory and independent. On August 1, 1914, Germany invaded Luxemburg. Luxemburg is the chief town and capital. Under the peace treaty Luxemburg is entirely independent of Germany.

MEMEL

Area: 1,057 square miles. Population: 60,294.

Formerly part of East Prussia north of the Memel River, now under the administration of allied and associated powers.

MONACO

Area: 8 square miles. Population: 22,956.
A small principality on the French Mediterranean coast.

NETHERLANDS (HOLLAND)

Area: 15,760 square miles. Population: 6,724,662.
Population per square mile: 535.

The Netherlands form a characteristic portion of the great plain of western Europe. The surface is mostly low and flat. In some places near the coast, it is many feet below the sea level and is protected from the sea by dykes, some of which are sixty feet high and are maintained at great annual cost. There are neither mountains or valleys of note, but in all directions the country is crossed by streams and canals, the latter of more importance than the rivers. The government is a constitutional monarchy. The royal family belongs to the House of Orange. The legislative authority rests conjointly with the sovereign and a parliament called the States General, consisting of two chambers. The second, or lower, chamber may only introduce bills, the upper chamber approving or rejecting the same. There are eleven provinces and each has its own representative body. The inhabitants, known as Dutch, belong to the low German branch of the Germanic race. The school age is six to thirteen years, and attendance is obligatory. There are infant, elementary and middle class schools, classical schools and universities, as well as schools for working people, technical and navigation schools. Justice is administered by the High Court of the Netherlands, Courts of Appeal, District Tribunals and Cantonal Courts. There is no trial by jury in the Netherlands. The poor are mostly relieved by organized private charity. Amsterdam, the commercial metropolis, is built upon a foundation of piles. It is noted for its shore dykes and street canals. It has large commercial and manufacturing industries. Rotterdam has large shipping interests, as well as manufacturing and varied industries. The Hague, the capital, is noted for the beauty of its streets, its palaces and its environs. Utrecht, Groningen, Arnhem, Haarlem, Leyden, Nymegen, Dordrecht, Leeuwaarden and Tilburg are other important cities. Agriculture has reached a high degree of perfection. All cereals and roots are grown. Dairy farming, poultry and bee culture are sources of great wealth. Some coal is mined in the province of Limburg. There are large exports of textiles. Raw material is imported, and exported in various manufactured forms. There are 2,000 miles of canal and 2,320 miles of steam railways. The Netherlands is a free trade country. Every citizen is liable to service in the army from 19 to 40 years of age.

The colonial possessions of the Netherlands, situated in the East Indies and West Indies, embrace an area of 783,000 square miles and a population of 38,000,000, about six times as large as that of the mother-country.

In Asia, Dutch East Indies:—Java and Madura, Sumatra, Riau-Lingga Archipelago, Banca, Billiton, Borneo, Celebes Molucca Islands, Timor Archipelago, Bali and Lombok and New Guinea. In America, Surinam, or Dutch Guiana, Curacao, and a number of smaller islands along the coast of Venezuela.

NORWAY

Area: 124,643 square miles. Population: 2,632,010.
Population per square mile: 19.2.

Norway embraces the western and northern two-fifths of the Scandinavian Peninsula. It has a very extensive, deeply indented surface, is mountainous, and consists for the most part of high grade table lands, separated by deep and narrow valleys. The Glommen is the most important river; there are many smaller streams. To the south, near the island of Mosken Valro, is that remarkable whirl of currents known as the Maelstrom. The people of this north country began to be known about the fifth and sixth centuries. In 1814 Norway and Sweden were joined under one monarchy, and were so governed until 1905, when Norway declared the union dissolved and elected a son of the king of Denmark as king of Norway with the title of Haakon VII. Fog and storm are very prevalent along the coast, but the interior is drier. The winters are very cold and the summers warm. The longest day in the south is 18 hours and in the north it is about three months. The government is a constitutional monarchy. The legislative power is in the "Storthing," which is the representative of the people. The king may twice veto a legislative act of the "Storthing," but if it is passed a third time it becomes a law without his sanction; nor, except in a few cases, may the king appoint any but Norwegians to public office. The great majority of the people are Scandinavians. School attendance is compulsory. There are elementary, secondary, communal and private schools, as well as normal schools and universities. There are, likewise, schools for abnormal children and reformatory schools. Cristiania is the capital. It is fortified and has quite extensive manufacturing and commercial interests. Bergen, Drammen, Stavanger, Trondhjem, Cristiansand, Fredrikstad, Cristiansund, Haugesund, Frederickshald and Arendal are other large and prosperous cities. Agriculture affords poor returns for the best efforts of the people and much of the food necessary is imported. Fisheries, however, afford valuable employment, the most important being cod and herring. Shipbuilding, lumbering, woodworking and mining are all sources of much profit. The water powers are valuable. The exports are timber, fish, minerals and fur. There are 1,967 miles of steam railway, all but 282 miles being owned by the state. In proportion to the population, Norway has the largest mercantile navy in the world.

POLAND

The new Republic was formed from parts of Russia, Germany and Austria, a restitution of what was formerly a great independent nation, ruthlessly torn apart by more powerful neighbors. According to Polish figures the new Republic will have an area of about 250,000 square miles and population of 36,234,000, which may be slightly modified. At any rate Poland will take its place as one of the largest and most populous of the European states, about equal to France and to Italy in population.

Poland was independent from the end of the 10th to the end of the 18th century, and in the 15th century was one of the highly civilized nations of Europe. In 1772, 1793 and 1795 Poland was divided by Russia, Prussia and Austria. Poland was the battle ground for some of the earliest and most important actions between the Russians and Austro-Germans in the recent war and the suffering of the people and loss of material wealth has been beyond computation.

The first president was Joseph Pilsudski. The Poles are Slavs. Every Pole over 21 years of age, male or female, may vote. Education of the people has been well taken care of in those parts formerly Austrian and German, and it is expected that the entire population will now be well favored in that respect. Agriculture is the chief industry in Poland. Russian Poland and the German Polish acquisitions include a great percentage of arable land, and forestry is important in all the republic, not less than 18% of the whole in each province. Chief products, rye, wheat, barley, oats, potatoes, sugar beets. Animal industry important. Mining: Coal, iron ore, zinc, lead, salt rock. Oil production is a growing industry. Among manufactures are chemical works, metal works, blast furnaces, etc. By the terms of peace treaty, Poland will have direct access to the sea via the Vistula through Danzig.

PORTUGAL

Area: 35,490 square miles. Population: 5,957,985.
Population per square mile: 152.8.

Portugal entered upon a period of maritime discovery and prosperity in 1385, and for two hundred years was one of the great powers of Europe. Its monarchial government was overturned and a Republic established with very little bloodshed October 4, 1910. King Manuel II., the deposed king, took refuge in England. Portugal has a coast line of about 500 miles. The country is generally mountainous and is well supplied with navigable rivers. Mineral resources exist in great variety. There are salt marshes along the coast. Mineral springs abound, and there are extensive forests. The winters are short and mild, and the climate generally equable. The people are of the Aryan stock and belong to the Latin family. The republican government has separated the state from the church. Primary education is free and compulsory, and the schools are well attended. There are three universities, a technical school, colleges for music and art, commercial schools, a military academy and a naval school. Lisbon, the capital, contains the public buildings, educational institutions, palaces and residences of the nobility. Its foreign trade is large, but it has few manufactures. Oporto is the center of the industrial district. Its wines (port) have a world-wide reputation. Braga is an old city with large trade and manufactures. Coimbra, Setubal and Evora are famous for manufacturing, for educational and other institutions. Portugal entered the Great European War on March 9, 1916, when Germany declared war on her. There are 1,849 miles of steam railway.

Portugal's dependencies are Portuguese India, or Goa, Daman and Diu in India; Macao in China; Timor in East Indies; Cape Verde Islands, Azores and Madeira in Atlantic Ocean; Portuguese Guinea, Islands of Saint Thome and Principe, Angola and Mozambique in Africa.

RUMANIA

Area: 122,282 square miles. Population: 17,393,149.

To the pre-war kingdom of Rumania were added parts of Russia, Hungary, and Bulgaria, thus expanding from an area of 53,489 square miles and a population of 7,508,009 to more than twice these figures.

Rumania became independent of Turkey July 13, 1878. It was the eastern outpost of Rome and the population of pre-war Rumania was largely Italian in origin and custom.

Incorporated into present Rumania are people of diverse origin and sympathy, Bulgars, Russians, Turks, Magyars, Saxons, etc. Leading religion is the Russian Orthodox, but there is a considerable element belonging to Greek, Roman Catholic and Protestant churches. Each religion is assured full liberty. Education free and compulsory.

Agriculture is the leading industry. Wheat, rye, barley, oats and corn is raised in abundance. Forestry is important. Cattle raising increasing. Coal and oil is produced.

Railway mileage 2,313, under government control.

RUSSIA

Russian Socialist Federal Soviet Republic in Europe and Asia. The revolution which started March 12th, 1917, led to the abdication of Czar Nicholas 2nd.

The Duma set up a Provisional Government under Prince Lvoff, which was reorganized May 17, 1917, and on August 6th, a new Cabinet was formed under Alexander Kerensky. After another reorganization this lasted until November 7, 1917, when it was deposed by the Military Revolutionary Committee of the Petrograd Soviet, and handed over to the All-Russian Congress of the Councils of Workmen's, Soldiers' and Peasants' Deputies. On November 10th, was announced: "The All-Russian Congress of the Councils of Workmen's, Soldiers' and Peasants' Deputies decrees the form of administration of the country pending the meeting of the Constituent Assembly. The Government authority is with the Board and chairmen of these Commissiarats, that is, the Police Commissaries, and the right of systematizing them belongs to the All-Russian Congress of the Councils of Workmen's, Peasants' and Soldiers' delegates and its Central Executive Committee.

The change in national title from the "Russian Socialist Federated Soviet Republic" to the "Allied Soviet Republics" took place the first week in November, 1922, when the All-Russian Soviet Executive adopted a resolution, introduced by the Ukrainian Soviet Government, providing for a "centralized organization of the Allied Soviet Republic," doing away with the illusion of "independence" and "autonomy," with which the various "federated" republics had been labeled. This change necessitated new supplementary treaties between Soviet Russia, Soviet Ukraine, Soviet White Russia, the Transcaucasian Republics, and the late Far Eastern Republic. The voluntary decision of the Far Eastern Republic of Siberia centralized at Chita, its capital city, to abolish itself, November, 1922, and join the Russian Soviet of Moscow, was a consequence of the latter's new organization

Military service is compulsory, but only the workers can defend the country with arms.

The highest authority is the All-Russian Congress of Soviets which consists of representatives of town Soviets on a basis of one delegate to 25,000 inhabitants and of Provincial Congresses of Soviets on a basis of one delegate to 125,000 inhabitants.

Prevailing religion is the Orthodox faith.

Education is now obligatory and free of charge. Children are provided with hot lunches and all necessary books and appliances. Numerous kindergartens and children's clubs have been established.

To the many institutions existing before the Soviet have been added others for the study of medicine, economics and other sciences.

Education as advanced by the present Republic has up to November, 1921, resulted in teaching 5 million out of 30 million former illiterates to read and write. Only 15 per cent of the Red Army are now illiterate against the pre-war figures of 85%. In 1914 there were 1,700 "Secondary Schools." In 1920 in the smaller areas, about 4,000 schools.

The production by agriculture, commerce, and industry is gradually assuming promising growth. In 1921 the number of persons dependent on the state was reduced from 38 million to 8 million.

Principal exports, timber, flax, hemp, platinum.

Railway mileage 1921 was 29,909.

Area and Population, Census of Aug. 20, 1920.

	Area Sq. Miles	Population
Great Russia	1,290,440	65,751,898
Ukraine	174,510	26,001,802
White Russia	23,290	1,634,223
Labor Communes	36,570	5,987,460
Autonomous R'plic	1,533,630	18,748,572
Autonomous Areas	169,560	2,057,413
Siberia	4,210,420	9,257,825
Total	7,438,420	124,050,493

Associated Republics closely connected by agreement of permanent character.

	Area Sq. Miles	Population
Azerbaijan	33,970	2,096,973
Armenia	15,240	1,214,391
Georgia	25,760	2,372,403
Far East	652,740	1,811,725
Total	8,166,130	131,545,985

of divisions of the old empire that are still closely affiliated.

The following Asiatic countries have made agreements with the Soviet.

	Area Sq. Miles	Population
Bokhara	79,440	3,000,000
Khiva	24,310	519,438
Mongolia	5,556,000	645,000
Total	5,659,750	4,164,438

Thus the governments formed from territory formerly part of the old Russian Empire and which are now under Soviet rule, together with those closely affiliated by agreement control an area equalling about 24% of that of the earth, and with a population of about 8% of the total for the world.

Following countries, formerly part of the old Russian Empire are not included as they formed independent organizations without affiliations or federation with the Soviets.

Finland, Esthonia, Latvia, Lithuania, and Poland. Bessarabia is now part of Rumania.

SAN MARINO

Area: 38 square miles. Population: 11,944.
Population per square mile: 29.7.

Embraced within Italy and on its Adriatic coast east of Tuscany and north of Marches, is the tiny Republic of San Marino, the oldest and smallest state in Europe. The chief exports are wine, cattle and stone.

SPAIN

Area: 194,783 square miles. Population: 20,719,598.
Population per square mile: 102.6.

The silver mines of Spain were the magnets that attracted the Gauls, Carthagenians, Romans, Goths and Moors in the earliest centuries. As Hispania it was one of Rome's most valuable provinces. The Moors were later dominant there for centuries. The reign of Ferdinand and Isabella began in 1479. During the sixteenth century Spain was one of the most powerful monarchies in Europe, and Spanish ships were on every sea. From 1873 to 1875 it enjoyed the distinction of being a republic. It is now a constitutional monarchy, the executive being with the king and the legislative with the "Cortes" and king; the "Cortes" being composed of a senate and house equal in authority. Seven mountain ranges break the monotony of the surface, more than half of which is an elevated tableland. There are nine important rivers; four flowing into the Mediterranean and five into the Atlantic. The entire coast line is 2,080 miles. In the southwest the climate is tropical, but on the central plateau it is cold in winter. Earthquakes are frequent. There are about 500,000 Basques in the north who differ in race and language from the rest of Spain. There are public and private schools, as well as universities, law, medical and special schools; yet, at least fifty per cent of the population cannot read or write. Military service is compulsory. There are many fortresses that guard the frontier. The navy is small and the vessels old. The country is very fertile; four-fifths of the soil is productive and agriculture is the chief industry. There are a few cereals, but grapes, olives, nuts, oranges and other fruits are the chief agricultural products. Wine and oils are extensively exported. Silk culture is carried on in several provinces. All kinds of farm animals are plentiful. There are large manufacturing establishments of cotton and woolen goods, and there are paper mills and glass factories. The income from fisheries is about $8,000,000 annually; there are 400 establishments for the canning of sardines. Spain is rich in minerals, almost every kind being found in the mountain elevations. Madrid, the capital, is the largest city. Barcelona is a walled city on the Mediterranean and has valuable manufactories. Valencia, Seville, Malaga, Murcia, Zaragoza, Cartagena, Bilbao, Valladolid, Cadiz and Grenada, noted as the capital of the Moorish rulers, are other large cities. There are 9,299 miles of steam railway. Spanish colonies are Rio de Oro and Adrar, Spanish Guinea, Fernando Po, Annabon, Corisco, Great Elobey, and Little Elobey, all in Africa.

SPITZBERGEN

An island to the north of Europe, is under the sovereignty of Norway. Area about 25,000 sq. miles. Inhabited by a few hundred miners and sailors.

SWEDEN

Area: 173,035 square miles. Population: 5,813,850.
Population per square mile: 33.7.

Sweden comprises the eastern three-fifths of the Scandinavian Peninsula, being separated from Norway by the Kiolen mountains. The northern part is largely forest, the central part is a mining district, and the southern is devoted to agriculture. The air is dry and clear, severely cold in the winter and hot in the summer. Sweden is a constitutional monarchy. There is a Council of State and a "Diet," the latter being a parliament or congress of two houses, the members of which are elected by the people. The power of the king is exercised in conjunction with the Council or the Diet. The great majority of the inhabitants are of the Scandinavian branch of the Aryan family. There is a supreme court, superior and minor courts, all quite independent of the government. Public instruction is free and compulsory, and children not attending must furnish proof that they are being educated privately. There are four universities, and there are private schools of science, medicine and law, as well as normal and high schools. The sloyd (slojd) system of training in manual dexterity is famous, and has been extensively copied by other nations. Stockholm, the capital, is the literary, social and commercial center of the country. It exports largely of lumber, iron, cotton and woolen goods, leather, machinery, etc. Goteborg, Malmo, Norrkoping, Halsingborg, Gefle, Orebro, Karlskrona, Eskilstuna, Boras, Sundsvall, Jonkoping, Uppsala, Lund, and Falun are other large and important places. Commerce, shipbuilding and fisheries are leading industries. More than half of the land surface being under forests, naturally timber and woodwork industries are of great importance. Only about two per cent of the land area is under cultivation. Cereals and potatoes are raised and cattle and dairy products are thriving industries. Is rich in iron, and there are many other minerals in more or less abundance. Sweden profited greatly from the world war, proclaiming neutrality and supplying goods to Germany. There are 8,928 miles of steam railway, of which 2,911 miles belong to the state.

SWITZERLAND

Area: 15,976 square miles. Population: 3,937,000.
Population per square mile: 269.3.

In the early part of the middle ages Switzerland was a part of the German Empire. In 1315 it secured independence, which it has maintained. The legislative authority is vested in a parliament of two chambers, a state council and a national council. United, these chambers represent the supreme government. The president and the vice-president of the federal council are the first magistrates of the republic. Both hold office one year and are not eligible for re-election, though the vice president may be elected president. Each canton and demi-canton has its own local government, but all are under the federal government. Switzerland is the most mountainous country in Europe. The mountain scenery is grand. Mountain chains cover much of its surface, and from the great glaciers of these heights, the Rhine and the Rhone, the Danube and the Po collect their head waters. There are beautiful lakes well known to tourists. Naturally, the great elevations produce differences in climate, which is often very variable in the same localities. There are often cold mornings and evenings with excessive heat during the day. Seventy per cent of the people speak German, the rest French or Italian. Switzerland depends upon a national militia for defense. Service in this force is compulsory and universal. Education is very widely diffused and is compulsory. Its elementary, higher, professional and classical institutions are found in all the larger cities. There are four well known universities. Geneva is known for its excellent watches, clocks, music boxes and jewelry. It is also noted for science and literature, and it occupies a very exalted place among European cities. It has been selected as the seat of the League of Nations. Switzerland maintained absolute neutrality in the war of 1914-18, and served as a place of refuge for deposed kings, etc. The people have made an art of entertaining tourists. Bern, the capital, is a beautiful city 1,700 feet above sea level. It has many manufactories and considerable commerce. Basel is the center of the silk industry. There are a number of other cities, Zurich, Lausanne, St. Gallen, Chaux de Fonds, Luzern, Biel, Winterthur and Neuchatel, all noted for manufacturing, for educational institutions, for ruins and landmarks of the past, and for picturesque scenery. Notwithstanding the mountainous nature of the country, more than fifty per cent of the land is under cultivation. The Swiss excel in husbandry. Cereals, potatoes and grapes are chief crops. Dairy products are of great importance. There is hardly a canton in which the vine is not grown. Manufacturing and mining are valuable industries. There are 3,530 miles of steam railroad, five of the principal railways being owned by the government.

TURKEY IN EUROPE

By treaty of Mudania, October, 1922, Thrace, including Adrianople, up to the Maritza river, is restored to Turkey. A new neutral zone is created east of the Podima-Kalikratia line, including Constantinople and also the Gallipoli peninsula, south of the Balka-Bulair line. A republic has been proclaimed by the Turkish Nationalist. (See Turkey in Asia.)

UKRAINE

Declared a Republic in 1917 and so governed itself to November, 1922, when it became a part of the Allied Soviet Republics. Ukraine includes the former governments of Volhynia, Podolia, Kherson, Poltava, Kief, Chernigof, Ekaterinoslaf and has claimed a considerably extended domain. The capital is at Kiev. Other important cities are Odessa, Kharkov, Yekaterinoslav and Zhitomir. Normally the country is rich and produces great crops of grain. Here are also found great deposits of iron ore.

ZARA

An Italian port on the east coast of the Adriatic.

ZONE OF THE STRAITS

Comprises the territory on each side of the Dardanelles, Sea of Marmora and Bosporus, between the Black and Aegean Seas, formerly Turkish, now under a Commission, appointed by the League of Nations.

ASIA

Area: 17,057,666 square miles. Population: 900,000,000.
Population per square mile: 52.76.

Asia is the largest, as well as the most populous, grand division of land on the globe. It is over 6,000 miles long, about 5,250 wide. Its coasts are deeply indented with seas and bays, and it contains within its interior great seas and lakes, broad rivers, and the loftiest mountain peak and highest table land in the world; further details of which will be given under the headings of the different Asiatic countries. So great is the extent of Asia that every known climate is found within it, from the severe cold of the Siberian area to the varied semi-tropical temperature, the great summer warmth and rainfalls of the monsoon area and the intense heat of the sub-equatorial. The Mongol and the Caucasian races occupy nearly the whole of Asia. The Himalaya, the Hindu-Kush and the Caucasian Mountains are the dividing line separating the two races; those north of these ranges being Mongols and those south Caucasians. The Malay Peninsula is occupied by the Malay race, and there are a few Nomadic tribes still under patriarchal rule. In Asia the great and dangerous animals are found, such as the elephant, tiger, rhinoceros, orang-outang, zebra, camel, crocodile, serpents, etc. The vegetable productions and fruits of southern Asia equal in luxuriance and delicacy those of any part of the world. The domestic animals and fowls are descendants of the parent stock from which the world has been supplied, and, yet, the industries of agriculture and of pasture and dairy are far behind those of the progressive portions of the globe, although as intensive gardeners Asiatics get twice the produce from a given area as do any other people.

ADEN, PERIM, SOKOTRA, KURIA MURIA ISLANDS, AND BAHREIN ISLANDS

Area: 10,462 square miles. Population: 58,165.
Population per square mile. 55.6.

Aden, a volcanic peninsula on the Arabian coast, on the Gulf of Aden, about 100 miles east of the south entrance to the Red Sea, but seventy square miles in extent, has one of the best harbors in that part of the world. It is one of the links of the system of British fortified coaling and naval stations on her path to India.

Perim, at the immediate southern entrance to the Red Sea, is an island in the center of the Strait of Bab el Mandeb, of about five square miles, and is also held by the English.

Sokotra, an island in the Indian Ocean at the entrance of the Gulf of Aden, originally a part of the Sultanate of Zanzibar, became a British protectorate in 1876. It is of sufficient size to have industries worthy of note. Dates, various gums, and butter are mainly exported.

The **Kuria Muria Islands** were ceded to Great Britain by the Sultan of Oman for the purpose of landing the Red Sea cable, and are now leased for guano collection. They are in Kuria Muria Bay, at the opening of the Arabian Sea into the Indian Ocean.

Bahrein Islands. A group of small islands in the Persian Gulf off the coast of El Hasa in Arabia. The great industry is the pearl fishery. Dates are produced. Also British.

ARABIA

Nejd Hasa (Emirate)

A small independency of central Arabia with its capital at Riyadh. Estimated permanent population, 25,000.

Jebel Shammar (Emirate)

Population estimated, 20,000.

A small principality north of Nejd to which it formerly belonged. Its population is largely nomadic. Capital, Hail.

Asir

Population estimated, 1,500,000.

A principate on west coast of Arabia. Capital, Sabiyah.

Yemen

Area: 75,000 square miles. Population, estimated, 1 million.

Capital, Sanaa. The Immanate of Yemen is very old. Agriculture is followed to a considerable extent.

Koweit

Population: 50,000.

A sultanate on the Persian Gulf. Under subsidy to Great Britain.

AFGHANISTAN

Area: 250,000 square miles. Population: 6,380,500.
Population per square mile: 24. Capital: Kabul.

This is a mountainous country, averaging 4,000 feet above the sea. It depends largely upon irrigation for cultivation. It is far from the sea, shut in from the rest of the world by high mountain chains. The chief caravan route is over the Kaiber Pass. The Afghans are a mixture of different tribes. It is a hereditary monarchy. Justice is dispensed by the nobles after the feudal fashion. Spoilation and theft are almost universal. There is an army of about 60,000 men, being mostly retainers of the great chiefs. Kabul, the capital and principal city, is about 6,000 feet above the sea. Its streets are narrow and winding. It has oriental merchants, but modern arsenals, gun factories, etc., a strange admixture of the twentieth century in military progress and ages past in other respects. It is an agricultural country and of most crops produces two harvests each year. Some cereals and many fruits grow in abundance. There are some mining and primitive manufacturing of silks, carpets, camel hair goods, etc. At Kabul is a small local railway. Wheeled transportation is not generally used, camels, coolies and ponies being the freight carriers.

AZERBAIJAN

Area: 33,970 square miles. Population: 2,096,973.

A Republic from March, 1918, to November, 1922, when it united with the Allied Soviet Republics. The bulk of the population of Azerbaijan is composed of Mussulmen and Armenians. The capital is Baku (population 250,000), in the heart of a great oil region. It is favorable also for production of cotton, cereals and cattle raising.

ARMENIA

Area: 15,240 square miles. Population: 1,214,391.
Capital: Erivan.

Independence was proclaimed December, 1918, and all nations notified. The Armenian government, a Soviet Republic, was proclaimed April, 1921, and November, 1922, affiliated with the Allied Soviet Republics. The chief towns are Erivan, Alexandropol and Kars. By an agreement with the Caucasian states, Batum, a city of importance on the Black Sea, has been declared a free port.

BALUCHISTAN

Area: 134,638 square miles. Population: 834,703.
Population per square mile: 6.2. Capital: Khelat.

Baluchistan, "Country of the Baluchs," a British dependent state or protectorate, is on the northwest border of India, between that country and Persia and south of Afghanistan. The ruler, khan of khelat, is the head of a confederation of chieftains, with powers that are difficult to define, and under the dominancy of a British Resident. The country is hilly and even mountainous, and to a great extent, is a region of sandy, barren deserts. In the lowlands where there is water and irrigation is possible, the country produces tobacco, indigo, cotton, rice and sugar, and, on the highlands, barley, wheat, madder and fruits. Lead, iron and copper are found and scantily produced. The manufactures are inconsiderable. Baluchistan disputes with Aden the record of being the hottest land in Asia. The dryness and withering nature of the heat and occasional sandstorms add much to its discomforts. It has no harbors on the Arabian Sea, but two or three safe roadsteads, from which wool, hides, madder, dried fruits, tobacco and dates are exported. Khelat, the capital, is the only town worthy of mention.

BHUTAN

Area: 20,000 square miles. Population: 250,000.
Population per square mile: 12.5. Capital: Punakha.

Bhutan is an independent state in the Himalayas, north of India and south of Tibet. It is 90 miles wide and 180 long. The authority is divided between two Rajas: one a secular and the other a spiritual head. The people practice both polygamy and polyandry. Education is neglected. Cereals, tobacco and spices are the principal products. Brass, copper and iron goods are manufactured.

BOKHARA

Area: 83,000 square miles. Population: 1,250,000.
Population per square mile: 15. Capital: Bokhara.

Was founded by the Usbegs in the fifteenth century. Mir Muzaffar-ed-din in 1866 proclaimed a holy war against the Russians, who thereupon invaded his dominions, and forced him to sign a treaty ceding the territory of Tye Doria, to consent to the demand for a war indemnity, and to permit Russian trade, but with the break-up of Russia this arrangement no longer exists. The country produces corn, fruit, silk, tobacco, cotton and hemp; and breeds goats, sheep, horses and camels. Gold, salt, alum and sulphur are the chief minerals found. There are 186 miles of railroad open. Besides the capital, Bokhara, the chief towns are Karshi, Khuzar, Shahr-i-zabz, Hissar, Charchui, Kabakol and Kermine.

BRITISH NORTH BORNEO

Area: 31,106 square miles. Population: 208,183.
Population per square mile: 6.7. Capital: Sandakan.

Occupies the northern part of the island of Borneo. The interior is mountainous, Mount Kini Balu being 13,455 feet high, but most of the surface is jungle. Owned by Great Britain, and the affairs are administered by a governor appointed by the British crown. Chief products are timber, sage, rice, cocoanuts, gums, coffee; many fruits, nutmegs, cinnamon, pepper, gambier, rubber and tobacco. A railway, 130 miles, runs from Brunei Bay into the interior and from there to Jesselton on Gaya Bay.

BRUNEI

Area: 4,000 square miles. Population: 30,000.
Population per square mile: 7.5. Capital: Brunei.

On the northwest coast of Borneo, owned by Great Britain. General administration under British Resident. Production much the same as British North Borneo.

CAMBODIA

Area: 45,000 square miles. Population: 1,634,252.
Population per square mile: 36.3. Capital: Pnom Penh.

Cambodia is, for the most part, a lowland, well watered country, with some hills both to the east and west of the Mekong or Cambodia river, which passes nearly centrally through it. The products and industries are about the same as those of Annam, its trade being carried mainly through Saigon or down the Mekong. The capital, Panompeng, and Kamput, the principal city, are worthy of note. The French protectorate was recognized in 1863. A large number of Malays and Chinese inhabit the country.

CEYLON

Area: 25,481 square miles. Population: 4,686,383.
Population per square mile: 180.

A British insular colony in the Indian Ocean immediately southeast of India, and so closely connected with it that a proposed railroad from one to the other will extend only thirty-five miles on islands, twenty-two on exposed coral reefs and only one across shallow channels. Its authentic history dates from 543 B. C., and comes down through an unbroken line of 160 Singhalese rulers to 1815, when it finally became entirely a British colony. In Indian mythology Ceylon was the Paradise in which Adhama and Eva dwelt until their expulsion for sin. While well watered, it has no rivers of any great size. The interior plains are extremely fertile and have won it its various names and produced for the British their most prosperous plantation colony. Valuable plumbago mines exist in the interior and Ceylon has long been famous for its rubies, sapphires and pearls. It is a veritable garden of fascination for botanists and zoologists, its tropical verdure surpassing most like portions of the globe. The elephant, bear, panther, numerous monkeys, paradise peacocks and other bright plumaged birds, many snakes, and other reptiles, countless fish, and insects are found and abound in the rivers, jungles or mountain sides. In times of drought wild elephants from the jungle belt raid plantations and eat the crops, although in ordinary times they are very timid, eating, even, the straw thatch off the roofs of the planters' bungalows. While the climate is very tropical, the heat is moderated by the surrounding sea, and the fact that it is in the path of two monsoons. The mean temperature is 88 degrees. In the hill country the climate is most charming and healthful. Fully seventy per cent of the population are agriculturists. Not one-tenth of one per cent are Europeans, nor one per cent of European descendants. Education is steadily advancing. The administration is in the hands of a Governor-General and Legislative Council. Justice is administered by a supreme, a district and police courts. Tea, coffee, cocoa, cinchona, cocoanut oil, dates and spices are prominent products and are exported. Tea is the chief export, Ceylon ranking third in the world in this respect. A large area is under cocoanut culture. There are about 750 miles of railway open to traffic. Colombo, the capital, is a strongly fortified city of much strategic and commercial importance. Trincomali is the headquarters of the British East India fleet, while Kandy is noted for the excellence of its climate and beauty of its surroundings. Other important places are Point de Galle and Kandy.

The Maldive Islands are a group 500 miles west of Ceylon, governed by a hereditary Sultan, and are a dependency of the Ceylon government. There are seventeen of these islets, richly clothed with palms and yielding various fruits and edible nuts. The people are Mohammedans, thoroughly civilized, and great navigators.

CHINA

Area: 3,913,560 square miles. Population: 320,050,000.
Population per square mile: 82.

China proper and its dependencies form a vast republic in Eastern Asia, which consists of five great divisions, viz: China and provinces, Manchuria, Inner Mongolia, Tibet, and part of Sinkiang. The total length from north to south is 1,860 miles and width 1,520 miles. Within this vast region are four great mountain ranges, from whence proceed some of the longest rivers in the world. Manchuria and Inner Mongolia embrace the great middle table land of Asia. Tibet is cold and barren. Among the interesting features in the country is the Chinese wall that bounds China on the north and separates it from Chinese Tartary. This wall is 1,500 miles long and thick enough to admit of six horsemen riding abreast on it. It is said to have been completed 214 years before the Christian era. While the country is subject to great extremes of heat and cold, it is generally much colder than its proximity to the tropics would lead one to expect. The great mountain summits that fringe its borders, extract all the moisture from the air and the high table lands experience a temperature nearly allied to that of the Arctic regions. The inhabitants are the most ancient of those existing today in civilized countries. Their history extends back thousands of years. The government had been a pure despotism, and on February 12, 1912, it became a republic. The Chinese were pro-ally during the war. The Shantung peninsula, in German hands since November, 1897, was occupied November, 1914, by the Japanese and held by them to December, 1922, when it was voluntarily returned to China. For centuries education of a purely Chinese type was general, and led through an intricate system of public examinations to all classes of employment under the State. Being confined in its scope to the study of Chinese classical literature, this form of education was gradually undermined by the influence of increasing intercourse with other countries, until it was completely swept away by a Decree of September, 1905, abolishing the historic system of examinations. Since then an enormous impetus has been given to the modern educational movement which is developing rapidly throughout large portions of the Republic. Peking, the capital, is situated inland from the Gulf of Pechili, about 60 miles south and east of the great wall. It embraces an area of fourteen square miles. It is divided into two parts, one inhabited by Tartars and the other by Chinese. The president's palace is in the middle of the Tartar City, which has a high wall around it thick enough to allow 12 horsemen to ride abreast on it. There are nine gates. Nanking, the former capital, was in earlier times one of the most flourishing cities of the world. Canton is one of the richest cities of the Republic. Fuchau is important for commerce and literature. Ningpo abounds in wealth and is built with elegance. The food supply is as varied and rich as that of any country. Chinese merchants are noted for honorable dealings. China has a great and increasing commerce with the world at large. Its greatest products are tea, china ware, art goods and supplies, and silk, which are exported. Large quantities of eggs are shipped to the United States. There are fruits here of temperate and tropical zones, and many minerals. Sugar and cotton are cultivated. While manufacturing is extensive, it is nearly all done by hand or with simple implements. American milling and other machinery is extensively used. China produces the largest variety of grains, gums, spices, plants and drugs of any region in the world. There are 63 varieties of bamboo. Here is the natural home of the mulberry tree. There are cocoanut palms, pomegranates, olives, pineapples and oranges. It is the home of the mandarian orange, called "tangerine" by Europeans and Americans. Farming implements are very crude, but so great is the population that the lands are cultivated to the greatest region to the north. There are 6,813 miles of railway open for traffic, and about 2,000 miles now under construction.

EAST INDIES, DUTCH.

Area: 736,400 square miles. Population: 48,000,000.
Population per square mile: 65.3.

The Dutch possessions in Asia, forming the territory of Dutch East India (Nederlandsch Oost Indie), are situated between 6 degrees north and 11 degrees south latitude, and between 95 degrees and 141 degrees east longtitude. In 1602 the Dutch created their East India Company. This company conquered successively the Dutch East Indies, and ruled them during nearly two centuries. Since dissolution of the company in 1798 the Dutch possessions have been governed by the mother country. Java is extremely mountainous in the south, but in the north is covered with mangrove swamps in many places, and is flat and low. Sumatra is traversed from northwest to southeast by a series of ranges, many of whose dominating summits are dormant, extinct, or active volcanic cones. Borneo is the fifth largest island in the world. Much of the interior is little known. The center seems to be a plateau or nuclear mountain-mass, from which diverge several mountain chains. Between the ranges are alluvial plains. Borneo possesses a number of large rivers, the more important are Rejang, Kapuas and Barito. Celebes consists of four large peninsulas, separated by three deep gulfs. They are all formed by chains of mountains running seemingly from a common central territory, which may be that of the Latimojong Range. No navigable rivers, a number of lakes.

These larger islands, together with a number of smaller ones, have a salubrious climate, although crossed by the equator, and are generally healthy. The extreme heat is tempered by the sea breezes. Rainfall is very abundant. Precious stones, gold and coal are found and worked on all the large islands. Monkeys and reptiles are numerous. Dense and magnificent forests clothe the mountain sides, and many kinds of valuable woods are to be found, such as ebony, betel-nut, sandal-wood, mango, silk-cotton tree, sago and nutmeg trees. On some of the islands wild animals are numerous, such as the bear, panther, rhinoceros, elephant, tapir, wild boar, civets, orang-outang and many others. The soil is very fertile, being cultivated extensively, and grows vegetation unsurpased in luxuriance. In Java, villages of bamboo houses surrounded with hedges of fruit trees, the banana and bamboo, contrast agreeably with the vast fields of rice, artificially watered, and yielding often three harvests annually. Education is not of a very high order, except among the resident Europeans. Nearly 400 christian missionaries of various societies are at work on the islands, but the inhabitants are mostly Mohammedans.

The chief and most important cities of the Dutch East Indies are as follows: Batavia, in Java, the capital of the island and of the Dutch East Indies. Batavia is the great commercial emporium of the Malay Archipelago. Thirty-six miles by rail south is Buitenzorg, the usual residence of the governor-general of the Dutch East Indies. Here is located one of the most magnificent botanical gardens in the world. Samarang and Surakarta in Java, are fortified seaports. Surabaya has the best harbor in Java. The cities of Sumatra are Achin, capital of the province of the same name; Benkulen, Padang, and Palembang, Banjermassin in Borneo, and Macassar, in Celebes, are important places.

The Dutch forces in the East Indies constitute a colonial army which is entirely separate from the home army, and there is a considerable naval force. The total length of railways is 3,914 miles.

Molucca Archipelago, or Spice Islands, are mostly volcanic and fertile. Around them are many pearl and trepang fisheries. Products are nutmegs, cloves and other spices, sago, rice, coffee, tobacco and fruits.

EAST INDIES, Portuguese.

Area: 8,968 square miles. Population: 926,287.
Population per square mile: 103. Capital: Dilli.

Consists of the eastern portion of the island of Timor in the Malay Archipelago, with the territory of Ambeno and the neighboring island of Pulo Cambing. By treaty of 1859 the island was divided between Portugal and Holland. The surface is mountainous. Among the vegetable products are the bamboo, corn, toddy-palm, cotton, tobacco, coffee, sweet potato, indigo, sandal-wood, bread-fruit, copra, pineapple, cocoanut, lemon, etc. Iron, copper and gold are fairly abundant, as well as coal and petroleum.

FAR EASTERN REPUBLIC

The Far Eastern Republic, with headquarters at Chita, after a short independence, has been reincorporated as a part of Russia. In November, 1922, the All-Russian Central Executive Committee issued a formal proclamation to the effect that the republic was annexed and now formed an integral part of the Allied Soviet Republics. Area about 880,000 square miles and a population of less than 2,000,000. Vladivostok, the terminus of the Transsiberian railway, is the principal city and a seaport of great importance.

FEDERATED MALAY STATES.

Area: 27,506 square miles. Population: 1,036,999.
Population per square mile: 37.7. Capital: Kuala Lumpot.

A group of states in the southern part of the Malay Peninsula; are under British protection.

Perak. Area: 7,800 square miles: Population: 494,057. Population per square mile: 63.3.

Selangor. Area: 3,156 square miles. Population: 294,035. Population per square mile: 93.5.

Negri Sembilan. Area: 2,550 square miles. Population: 130,199. Population per square mile: 51.0.

Pahang. Area: 14,000 square miles. Population: 118,708. Population per square mile: 8.4.

These regions yield vast quantities of tin and are rich in gold. The products include pepper, coffee, sugar, rice, tapioca, cocoanuts, rubber and gambier. The forests yield valuable timber. 1,000 miles of railroads are open to traffic.

OTHER MALAY STATES (Under British Protection).

KELANTON.

Area: 5,870 square miles. Population: 286,751.
Population per square mile: 48.8.

On the eastern side of the Malay Peninsula. Kota Bharu is the capital. The state has a hereditary sultan. Religion is Mohammedanism. The chief industry is agriculture, and the products are rice, cocoanuts, betel nuts, rubber, resin, rattan, bamboo, pepper and corn. Minerals are gold, pyrites, galena and tin. A railroad is under construction.

TRENGGANU.

Area: 6,000 square miles. Population: 154,037.
Population per square mile: 25.6.

Capital, Kuala Trengganu. The industries and religion are similar to those of Kelanton, and the country is of the same character.

Kedah. On the west coast of the Malay Peninsula. Area: 3,800 square miles. Population: 245,986. Population per square mile: 64.7. Capital, Alor Star. The principal produce is rice. There are large rubber, cocoanut and tapioca estates. Religion and government much the same as Kelanton.

Perlis. Also on the western side of the peninsula. Area: 300 square miles. Population: 32,746. Population per square mile: 109. The principal agricultural product is rice. There are valuable tin and guano deposits.

Johore. Area: 7,500 square miles. Population: 180,417. Population per square mile: 24. At the southern extremity of the Malay Peninsula. Products are rubber, gambier, pepper, sago, tea, coffee, gutta percha, etc. Chief town, Johore Bahru. Has 120 miles of railway.

FRENCH INDIA.

Area: 196 square miles. Population: 266,064.
Population per square mile: 62.4.

Capital, Pondicherry. Consists of five separate colonies. Pondicherry, Karikal, Chandernagar, Mahe and Yanaon. The principal crops are paddy, ground-nut and ragi. There are 43 miles of railway open.

FRENCH INDO-CHINA.

Area: 256,000 square miles. Population: 16,990,229.
Populattion per square mile: 62.4

Consists of five states: Annam, Cambodia, Cochin-China, Laos and Tonking; and Kwang-Chau-Wan leased from China, as well as the territory around Battambang, which was ceded by Siam in 1907. The whole country is under a governor-general, Cochin-China being a direct colony, while the others are protectorates. Total length of railway open is 1,300 miles.

Cochin-China. Area: 20,000 square miles. Population: 3,050,785. Population per square mile: 152.5. Capital: Saigon. Cochin-China, the southernmost of the French possessions in Asia, is probably the most prosperous and thoroughly under Europeon influence. Besides the products and exports mentioned under Annam, hides, isinglass, cardamom and indigo may be mentioned, rice, however, being the chief and most important crop. Saigon and Mitho, connected by railway, are the principal cities. The fisheries and fish markets of Saigon are famous.

Annam. Area: 52,100 square miles. Population: 5,200,000. Produces rice, cotton, corn, mulberry, cinnamon, tobacco, sugar, betel, coffee, dye and medicinal plants. Iron, copper, coal, zinc and gold are mined.

Cambodia. Area: 45,000 square miles. Population: 1,634,252. Produces cotton, rice, corn, sugar, coffee, silk and tobacco.

Laos. Area: 98,000 square miles. Population: 640,877 Produces rice, cotton, indigo, tobacco. Has teakwood forests. Gold, tin, lead and diamonds are found.

Kwang Chau Wan. Area: 190 square miles. Population: 168,000. Produces cotton, yarn, opium, petroleum.

Tonking. Area: 46,400 square miles. Population: 6,119,720. Produces rice, corn, sugar cane and tobacco.

GEORGIA

Area: 35,500 square miles. Population: 3,176,156.

An independent republic from May, 1918, to November, 1922, now a part of the Allied Soviet Republics. Its capital is Tiflis. It is a productive region, with about 1,000 miles of railroad.

HEDJAZ

A former Turkish vilayet, extending along the Red Sea. Its area is about 100,000 square miles. Population exceeds 750,000. Within its confines are the sacred cities of Mecca and Medina. The capital and chief port is Jidda. The Kingdom of Hedjaz attained its independence during the course of the World War.

HONG KONG AND KOWLOON.

Area: 391 square miles. Population: 561,500.
Population per square mile, 1,436.

The British crown colony of Hong Kong, formerly a part of China, was ceded January, 1841, to Great Britain, and the cession confirmed in August, 1842. Great Britain has made of Hong Kong one of the first class military and naval stations of the world and it has become a great center for Chinese and Oriental trade. The colony consists mainly of the small island of Hong Kong (Hang-Kiang, "fragrant streams") east of the mouth of the Canton river and separated from the mainland by a channel a mile wide, making an admirable deep water harbor. In 1861 the southern portion of the Kowloon peninsula opposite was added by treaty and in 1898 a considerable portion more of the mainland and some adjoining islands were leased by Great Britain to secure its defense. The island is rocky and picturesque, and not naturally fertile. The summer climate is hot, subject to extreme variation, during the winter months pleasant and bracing, with an average rainfall of about eighty inches. It is now, under English rule, a fairly healthy place. The population is chiefly Chinese, about one-third being birthright British subjects. It is one of the great traffic centers on the east coast of the Pacific. The city is built in terraces up the mountainside to an elevation of 600 feet. Fine public buildings and substantial improvements, with fine docks and a very diversified trade with the inland add to the attractiveness of the place. Victoria Peak is reached by tram cars or sedans, as one prefers, and affords a magnificent view.

KIAU-CHAU (KIAO-CHOW)

Shantung

Kiau-Chau, on the east coast of the Chinese province of Shantung, was seized by Germany in November, 1897; the town, harbor, and district were by treaty transferred to Germany on a 99 years' lease, March, 1898; and the district was declared a Protectorate of the German Empire, April, 1898. In November, 1914, the territory was captured by Japanese and British forces, and was administered by Japan under a mandate to December, 1922, when Japan voluntarily returned it to China. Area, about 200 square miles, exclusive of the bay (about 200 square miles). Population about 227,000. Surrounding the district and bay is a neutral zone, whose outer limit is 30 miles from highwater mark on the coast, its area being about 2,500 square miles, and population about 1,200,000. At Tsing-Tau there is one middle school, one girls' high school, 2 higher primary schools, schools for teaching Chinese to the Japanese, with a total of 152 teachers and 3,336 pupils in 1921. There are also 37 public schools for Chinese pupils, with 136 teachers and 3,293 pupils. The products are wheat, fruits, beans, ground-nuts, sweet potatoes, etc., silk culture, coal mining, briquette-making, brewing, soap-making are carried on, and there is a prosperous silk factory.

INDIA.

Area: 1,802,629 square miles. Population: 315,156,396.
Population per square mile: 175.

The extreme length of the British Empire in India, is 1,900 miles and the width 1,700. About one-third of India however is still possessed by native tribes, who wander through its forests, still uncontrolled by civilization; the rest is subject to the authority of England and governed by colonial laws. From the remains of monuments of architecture, many of which still exist, some in a style too ancient to be chronologically located, it is evident the early Hindus were a people of extraordinary civilization; their sacred writings are among the most remarkable literature of the world. There is a high central plateau occupying the southern peninsula, which stretches away toward the coast and is called the "Deccan." Fifty rivers find their way to the ocean through matchless valleys. Best known of all these is the Ganges; tidewater reaches nearly 250 miles from the ocean. The broad delta formed by its numerous, widely separated mouths, is entirely inundated, a hundred miles wide, in rainy seasons. Mythology, superstition and religion have each its claim to the life of this mighty river. Owing to the fact that there are high mountains and plateaus, there is some diversity of climate, but, generally speaking, the most intense heat pervades forest, jungle and plain throughout the empire. From June until January is a rainy season and from January to June a period of drought. Fevers and epidemic diseases rage in all localities. There are many varieties of inhabitants. Of the Aborigines, little is known, as the period in which they were dominant is far back beyond the limits of credible history. A few savage tribes still inhabit some of the wildest parts, resisting the influences of civilization. The native Hindus have intelligent features, the women being remarkable for their beauty. The East Indians, though black, are Aryans, like ourselves. They dwell in villages, having a chief magistrate who settles disputes and collects taxes no very great amount, and they care little as to what power rules the empire so long as their local customs are not interfered with. All powers are vested in the British government, and all revenues received in its name. There is a governor-general and governors of provinces. The native states are governed by native princes, all subordinate to the British. There are supreme and minor courts to render justice. The proportion of those able to read and write is still very small. About 22 per cent. of the boys attend school, and less than three per cent. of the girls. There are, however, elementary and normal schools, as well as colleges, and there are technical and medical schools and five universities. Calcutta is the metropolis of the empire. Its inhabitants are mostly Hindus and Mohammedans; the botanical gardens, the university, theatres, mosques and Hindu temples are among its features of interest. The European quarter is finely built and has given the city the appellation of "City of Palaces." The part occupied by the natives, however, is built of mud and bamboo. The trade of Calcutta is more extensive than that of any other city. Of Bombay, the larger part of the population is Hindu. Here the fire worshippers or Parsees number 50,000, and next to the Europeans take highest rank. Their language is the Sanskrit. Some of them are merchant princes of almost fabulous wealth. Madras, Benares, Hyderabad, Rangoon, Lucknow, Lahore, Ahmadabad, Agra and Delhi, the capital, are other large and wealthy cities. The wealth if India has attracted the covetousness of other nations from the earliest known history. Persia invaded and robbed it of precious gems. The armies of the Sultan have seized its wealth, and the conquering Tartars have entered with fire and sword. Gold has been gleaned from the sands from time immemorial. Diamonds, rubies, emeralds, cornelians, garnets and other precious gems are found, and there are iron, lead, mica, coal and salt. The mountains and sands are full of minerals. Among the great forests is a wealth of rubber trees, and palms bearing delicious fruits and nuts. The fig and bread-fruit tree combine beauty with luxury. Tea and rice yield abundant crops with little labor, and coffee grows almost spontaneously. There are 204 cotton mills and a number of mills for the manufacture of wool and silks. There are 34,616 miles of steam railways. Canals are an important means of communication, and the large rivers are used extensively for inland traffic.

IRAQ (Mesopotamia)

Area: 143,250 square miles. Population: 2,849,282.

This new kingdom embraces the former Turkish vilayets of Basra, Bagdad and part of Mosul, with the ancient city of Bagdad as capital. Here existed at one time ancient empires of history, magnificent cities and advanced civilizations contemporaneous with Egypt and China. Here it is also stated was the site of the Garden of Eden. All are buried in the sands, but evidence of former glories are constantly being excavated. Basra, situated on the Shatt-el-Arab, 70 miles from the Persian Gulf, is the principal seaport and a city of considerable commercial importance.

JAPAN.

Area: 260,738 square miles. Population: 57,070,936.
Population per square mile: 220.

Japan or Nippon (land of rising sun) consists of the large islands of Hondo (more often called Nippon), Shikoku, Kiushiu, Kokkaido (Yezo) and a score or more of adjacent islands and hundreds of islets connecting it with Taiwan (Formosa), which is part of the Empire. Also Chosen (Korea), Hokoto (Pescadores), and Karafuto (Japanese Sakhalin). These islands are all mountainous and earthquakes are quite common among them. The mountain sides are luxuriantly wooded and the valleys between them are fertile and cultivated to the utmost limit. The rivers are seldom navigable and there are few lakes, but there are many thermal and mineral springs. Of minerals copper is the most plentiful and of high grade. Gold and silver are found but not freely and such ores as lead and iron are of inferior quality. There are valuable building stones but they are not much used. The bamboo and sage palm flourish in the south and in the north are pine, elm, chestnut and oak. Japan cedar, camphor, laurel, wax tree, paper-mulberry, persimmon, orange, cherry, plum, apple, pear, peach and fig trees are not only cultivated but most of them grow wild. There are all varieties of climate, the northern part of the islands being in an arctic temperature, while the southern portions are enjoying a tropical verdure and warmth. The present inhabitants are Mongols with an admixture of the Malay, and are invaders, the Aboriginals still being found to a limited extent in Yezo and the adjacent Kuriles. The Japanese are small, artistic, imitative, polite and cleanly. They lay claims to a very remote history, but the real authentic history begins about 400 A. D. Though the government is a constitutional monarchy, something like absolutism still prevails. There is a national parliament but the mikado combines executive powers with sovereignty, treaty making and war declaring rights. He sanctions laws, opens and closes parliament. There are rich feudal lords, who occupy high social positions. The system of justice is somewhat on the European pattern. All male subjects between 17 and 40 years of age are liable to military service. Education is compulsory. There are elementary, middle and high schools normal schools, colleges of law, science, medicine, engineering and agriculture, and there are three universities. The general and local governments take generous care of their poor, expending large sums annually to provide work for them. The fisheries employ many thousands of men. Tokio, the capital and chief city, has quite extensive manufacturing. Only small vessels can enter its bay at high tide. Yokohama is Japan's principal port. Other important cities are Fukuoka, Hakodate, Hiroshima, Kanazawa, Kioto, Kumamoto, Nagasaki, Nagoya, Kobe, Kure, Sendai, Okayama, Sasebo, Nagoyo, Niigata, Osaka and Otaru. About three-fifths of the arable land is cultivated by peasant owners and the balance by tenants. The largest crop is rice, which forms a large part of the food; wheat, barley and rye are grown to quite an extent. Tea culture is very profitable and sugar is an important product. Cattle, horses, sheep, goats and hogs are important industries.

Shantung Peninsula—See Kiau-Chau.

Chosen (Korea). On September 5, 1905, Japan placed a protectorate over Korea, and on August 22, 1910, the Korean Territory was formally annexed to the empire of Japan. Area: 84,732 square miles. Population: 15,508,872. Population per square mile: 180.3 Capital, Seoul. It is entirely an agricultural country, but the methods are of a backward and primative type. Chief crops are rice, wheat, beans and grains of all kinds, besides tobacco and cotton. Whale fishing is carried on along the coast. Live stock is raised as a by-product. Gold mining is carried on. Copper, iron and coal are abundant, Graphite and mica also are found in considerable quanities. There are 992 miles of railroad in operation.

Taiwan (Formosa). Was ceded to Japan by China May 8, 1895. Area: 13,944 square miles. Population: 3,612,184. Population per square mile: 278. Capital: Tamsui. The agricultural products are rice, tea, sugar, sweet potatoes, ramie, jute, tumeric. Camphor is worked in the forests. There are active fisheries, and mining is making steady progress. Two hundred and six miles of railroad are open. The surface is mountainous, with few streams. The soil is extremely fertile and well cultivated, and the climate is salubrious. Hot springs are numerous and sulphur and petroleum exist in large quanities.

Kokoto, or the **Pescadores,** consists of about twelve islands, with a total area of about 47 miles.

Sakhalin, a long and narrow island off the east coast of Asia, separated from the mainland by the Gulf of Tartary. It is 570 miles long and from 17 to 90 miles across. Area, about 29,400 square miles. The surface is mountainous, rising in the peak of Tiara to 5,000 feet, and is largely forest clad, with some prairie land and pastures. The climate is very severe in winter and raw in summer. The grains are but little cultivated. Many fur bearing animals abound. Lignite coal occurs in large deposits. The island was originally Russian, but now officially held by Japan.

Port Arthur, lease was ceded by Russia to Japan by the Portsmouth treaty.

Ta-lien, and adjacent territory and waters, and also the railroad between Chan-Chun and Port Arthur, and the coal mines worked in connection therewith. In March, 1915, the Chinese government agreed to extend the lease of the territory on Liaotung Peninsula, including Port Arthur and Dairen, to 99 years.

Kwangtung, the leased territory at the southern part of the Liaotung Peninsula, has an area of about 1,256 square miles and a population of 517,147. Population per square mile: 411.8. Products are corn, beans, rice, tobacco and vegetables. There is an active fishing industry. Salt is abundant. Port Arthur and Dairen are the chief towns.

KHIVA.

Area: 24,310 square miles. Population: 519,438.

A state in Central Asia lying south of the Aral Sea. The Soviet Government in power has concluded a treaty of amity with Russia. The religion is Mohammedan. Chief products are cotton and silk. Chief towns besides the capital Khiva, are New Urgenj, Hazar Asp and Kungrad.

MACAO

Area: 4 square miles. Population: 74,866.

A Portuguese possession in China, situated on an island of the same name at the mouth of the Canton River, forms with the two small adjacent islands of Taipa and Coloane, a province, the city being divided into two wards, one inhabited by Chinese and the other by non-Chinese, each having its own administrator.

MONGOLIA.

Area about 1,367,600 square miles
Population: Established, 2,600,000.

A large area formerly a part of China, bordering Siberia and the Far-Eastern Republic, a large part of which is represented by the Gobi Desert. The population is made up of Mongols and Kalmucks who roam about with their animals. Chinese settlers are coming into this district in increasing numbers.

Mongolia was declared an independent kingdom during the Chinese revolution and was so recognized by Russia in 1912. In 1913 Russia recognized Outer Mongolia as under Chinese suzerainty and China accepted as a fact its autonomy; in November, 1919, China, however, declared null and void the independence of this district but in February, 1921, the Hutuktu was crowned King, and independence proclaimed. Capital Urga.

NEPAL.

Area: 54,000 square miles. Population: 5,000,000.
Population per square mile: 92. Capital: Khatmandu.

An independent Kingdom in the Himalaya mountains. It it governed by a maharaja and his prime minister. The government is a military oligarchy. The ruling people are the Gurkhas. Nearly the whole region consists of a seccession of lofty mountains and narrow valleys, and contains some of the highest mountains in the world. Mount Everest, 29,002 feet, Mount Kunchinjunga, 28.156 feet, and Mount Dhawalagiri, 26,826 feet. Rice maize, wheat, barley, cotton, sugar cane, tea and tobacco are among the chief crops. Fruits, drugs and dyeing materials are important products, and timber is abundant. Copper, iron and lead are among the mineral products, but the mining industry is on a small scale. The manufactures include textiles, metallic goods, paper from bark, and pottery. Hinduism of an early type is the religion of the Gurkhas, and is gradually but steadly overlaying the Buddhism of the primitive inhabitants. The people are in general prosperous.

OMAN.

Area: 82,000 square miles. Population: 500,000.
Population per square mile: 8. Capital: Mascat.

An independent State in southeastern Arabia, extending along a coast line—southeast and northeast—of almost 1,000 miles from the Gulf of Ormuz and inland to the desert of Dena. A mountain-chain runs nearly parallel to the northeast coast, embracing rich valleys and known as the imamat of Mascat. The population is poor, inland the sultan's authority is merely nominal and there is little security for life and property. Camels are bred in large numbers. As to the mineral resources little is known. Oman produces dates and other fruits, cereals, indigo, wine, coffee, etc. Pearls, mother-of-pearl and fish are exported. Mantarah is the only important port besides Mascat. Commerce is mostly by sea, but large caravans under protection carry on traffic with the interior.

Oman became a British and French Protectorate in 1919.

PALESTINE OR HOLY LAND.

Area, about 9,000 square miles. Population, 647.850.

A former province of Asiatic Turkey, comprising the southwest part of Syria. It borders on the Mediterranean Sea for a distance of about 160 miles, extending eastward to the Syrian Desert. On the north it has the region of the Lebanon. On the south the boundary is a short distance south of the Dead Sea. In Palestine an interesting feature in agricultural development is the establishment of Jewish and German colonies; of the former near Jaffa, there were before the war 44 with a total population of about 10,000, cultivating more than 94,900 acres, the chief produce being cereals, cotton, and various fruits. These colonies consisted mainly of Russian Jews, some being maintained by private enterprise, others by the Chovawe-Zion Association, and others by the Jewish Colonization Association, originally founded by Baron E. de Rothschild. Exports of oranges from Jaffa are quite extensive. A railway connects Jerusalem with the port of Jaffa, and another line connects the upper Jordan valley with the port of Haifa. The Damascus-Mecca railway is now in operation along the eastern border of Palestine.

Jerusalem (The Holy City) is a city of Palestine, the seat of the most important events described in the Bible. Population about 60,000, of whom two-thirds are Jews, the remainder being Christians and Mohammedans. By the treaty of peace 1919, Palestine is to be an independent nation under British protection.

PERSIA.

Area: 628,000 square miles. Population Est.: 9,500,000.

Persia is an elevated tableland, three-fourths of which is desert area. The mountains are treeless, the plains unattractive, and much of it, is without water. There are, however, some streams, and there are fertile valleys and oases in the desert tract. There are roses and wild flowers, and there are cereals, cotton, rice, tobacco, opium, fruits and raisins. Persia was the early home of the Aryans. Its first great empire was founded by Cyrus the Great. The form of government up to the year 1906 was similar to that of Turkey. The shah, within the limitations imposed by the Mohammedan religion, was an absolute ruler. In 1906 a national council was established, consisting of 156 members elected every two years. There is a senate of 60 members, 30 appointed by the shah and 30 elected on behalf of the national council. In the high lands the atmosphere is cool, but along the Persian gulf it is intensely hot. Many of the present inhabitants are nomads. There are colleges supported by the imperial funds, where instruction is given in Persian, Arabic and scientific literature, and there are many schools for children. Teheran, the capital, is on a riverless plain about 80 miles south of the Caspian Sea. It is built of brick, and has a mud-like appearance. Tabriz, Barfrush, Bushire, Ispahan, Hamadan, Kerman, Kermanshah, Meshed, Shiraz, Rosht and Yezd are other important cities, nearly all of which manufacture silks and carpets by hand, together with wines, oil of rose and fine oriental perfumes. Persian rugs, carpets, silks, shawls, swords and dyes are world-famous. There are few miles of railroad and the country roads are an obstruction to commerce.

PORTUGUESE INDIA.

Area: 1,638 square miles. Population: 531,798.
Population per square mile: 324.6. Capital: Panjim.

The Indian possessions of Portugal comprise Goa on the Malabar coast, Damao on the coast of India, about 100 miles north of Bombay, and Diu, a small island on the Gulf of Cambay, about 140 miles west of Damao. The trade of Goa is largely in grain, pulse, salt, that of the other two being mainly salt. There are 51 miles of railway.

SIBERIA

Area: 4,210,420 square miles. Population: 9,257,825.

A vast region in northern Asia, which was part of the former Russian Empire. It comprises the provinces of Tomsk, Tobolsk, Yeniseisk, Irkutsk and Yakutsk. The boundaries of this region are, European Russia on the west, where the Ural mountains form a part of the boundary for some distance, the Arctic Ocean on the north, on the east, the Pacific coast from Bering Strait to the Sea of Japan, and on the south by Mongolia and Central Asia. The entire region is a vast plain sloping gradually to the north, the western portion contains scarcely any elevations, the watershed between the Ob and Yenisei rivers is hardly perceptible, the interior and south are traversed by chains of mountains, the Altai, Sayan, Baikal and others. The Byelukha (White) mountain in the Altai has an elevation of 14,890 feet, other elevations along the ridge forming the southern boundary, range from 9,000 to 12,000 feet. The principal rivers are the Ob (with the Irtish), Yenisei (with the Argara), and Lena, these rivers flow into the Arctic ocean and are of little value commercially as they are closed by ice the greater portion of the year. Siberia has short warm summers and long intensely cold winters, the inhabitants are largely Russians, other elements are Khirghizes, Buriats and Yakuts. The woodland and forests are very extensive, here are found areas of pine, spruce, maple oak, beech, birch and poplar. Agriculture is most extensive in western Siberia. Wheat, hay, oats, barley and potatoes are raised, the raising of live stock is also important. Fur bearing animals abound and the taking and curing of furs is a valuable industry of the colder regions. Siberia has considerable mineral wealth, gold, platinum, silver, copper, iron, and lead are found, also large deposits of salt and sulphur. Siberian emeralds and topazes are famous. Chief cities are Irkutsk, Omsk, Novo-Nikolayevsk, Krasnoyarsk and Tomsk. The Trans-Siberian Railway has been an important factor in the development of this country. Western Siberia was taken by the Russians in 1582 and from that time the purpose of the government was to extend its dominions eastward. Under the rule of the Czars, thousands of political offenders were sent to Siberia and the name became synonomous with cruelty and despotism, many of the exiles who returned to Russia in 1917 (on the downfall of the Imperial Government), had strongest personal reasons for assisting the revolutionary movement. The people of Siberia attempted to establish an independent republic at this time, and the Siberian district congress at Tomsk elected a provisional government, with a coalition cabinet. The overthrow of the Kerensky regime by the Lenine group in November, 1917, gave impetus to great political confusion, the situation was affected by several factors, and the landing of allied troops, to keep the country from falling into anarchy. Several thousand deserters from the Austrian army had joined the Russians and when Russia withdrew from the war, they were given permission by Lenine to go to France, by way of Siberia, while on the march they were attacked; in self defense they struck back, seized the Trans-Siberian Railway and were persuaded by the allies to remain in Siberia to help preserve order. In 1918 the Russian Socialist Federal Soviet Republic was proclaimed. Now known as the Allied Soviet Republics. It is under this government that Siberia is ruled at the present time.

SARAWAK.

Area: 42,000 square miles. Population: 600,000.

It has lofty mountains in the interior, and is watered by numerous streams. Coal is found in large quantities, as are gold, silver, diamonds, antimony and quicksilver. It exports gold, sago, arrowroot, pepper, etc. It is under British protection and ruled by an English rajah.

SIAM.

Area: 195,000 square miles. Population: 8,924,000.
Population per square mile: 46.

Siam is situated in the Indo-Chinese Peninsula. The coast line is about 1,100 miles. The country is well watered. The lower part occupies part of the Malay Peninsula. This portion, however, is densely wooded and very rough. The climate is sub-tropical and is divided into a dry and a rainy season. The inhabitants are Malays, Burmese, Cambodians and less than half Siamese. The executive power is in the king, who is aided by a legislative council. Some governmental departments are in European hands. Siamese youths are sent to European schools. There are good government schools and hospitals, and in Bangkok, the capital, there is a museum and a royal library. This city has a population of nearly half million. Rice is the chief crop. Woods are exported. Coffee, cotton, tobacco, hemp, cattle, fish, pepper and fruits are produced and mostly used at home. There is some gold, as well as tin, copper, iron, zinc and a few diamonds, rubies and sapphires. There are 1,333 miles of railways open.

THE STRAITS SETTLEMENTS.

Area: 425 square miles. Population: 846,083.
Population per square mile: 2,000.

A British crown colony, comprising Singapore, Penang (including the province of Wellesley and Dindings), and Malacca. Added to these are the Cocos Islands, Christmas Island, and Labuan. The colony is administered by a governor and executive council. The governor is also high commissioner for the Federated Malay States. Each of these separate settlements has a number of municipal bodies, partly appointed and partly elected. The climate of all this region is intensely tropical, the lower part of it being but sixty miles from the equator. The people are a most cosmopolitan mixture of Asiatics, Eurasians and Europeans, in which the former greatly preponderate, and are represented by many insular Malays and Chinese, in addition to the natives. Education is partly supported by the government, but not compulsory. Judicial affairs are administered much as in India.

Singapore, an island about fourteen by twenty-seven miles, at the southern extremity of the Malay Peninsula and separated from it by a strait only three-fourths of a mile wide, has a number of small islands adjacent to it, which form a part of the settlement. Singapore, the capital is at the southern side of the island. It has become a commercial port of first rank, having an excellent harbor and good wharfage. It carries on an enormous trade through over fifty regular steam lines from all parts of the world, and is a port of call for all steamship lines in the European-Asian trade. It is used as a naval base and also maintains an English garrison. Population, 387,336.

Penang (meaning "Betel-Nut"), 108 square miles, is off the west coast of the peninsula at the northern entrance of the Straits of Malacca, and is the most northerly of the Straits Settlements. The channel separating the island from the mainland, about two miles wide, forms an excellent harbor. It has a large local trade which is increasing. Population, 305,739.

Malacca, on the west coast of the peninsula, between Singapore and Penang, about the middle of the Straits of Malacca, consists of a strip of coastal territory which, in the time of the Portuguese conquest, was an important center of trade. Population, 153,008.

SYRIA

Area: 106,748. Population: 3,200,000.

The history of Syria dates back more than 2000 years B. C. Since 1516 A. D. Syria has formed part of the Ottoman Empire but in the Treaty of Peace with Turkey, August, 1920, Syria was recognized as an independent state, to be placed under a mandatory power. By decision of the Supreme Council France has been assigned a mandate for Syria. Principal towns are Damascus, Aleppo, Beirut, Homs and Hama. The population is mainly of Semetic stock and Mohammedan in religion. The products are wheat, barley, maize, linseed, beans, vines, and olives. A railway runs north and south, from Beirut to Aleppo, where it joins the Bagdad railway and to the south through Damascus, into Arabia (the Hejaz Railway). The ports of Syria are visited regularly by the steamers of various shipping companies.

TIENTSIN

The Italian concession of Tientsin, under the agreement with China of June 7, 1902, lies on the left bank of the Peiho river, and has an area of about 18 square miles, with a native population of about 10,017. There is one village and salt pits.

TONKING (See French Indo China)

TURKEY (Ottoman Empire)

The Ottoman Empire before the war was made up of (1) Turkey in Europe, (2) Turkey in Asia (Anatolia, Arabia, Syria, Palestine, Mesopotamia, and Kurdistan), and (3) certain islands in the Mediterranean. After the conclusion of the first Balkan war (November, 1913), the Turkish possessions in Europe were considerably lessened, Turkey in Europe being in part divided among the allied states (Bulgaria, Serbia, Montenegro, and Greece), and in part created into an independent state of Albania. Cyprus and Egypt, which were formerly under the suzerainty of the Sultan, were, the one, annexed to the British Empire and the other declared a British protectorate.

According to the Treaty of Sevres, August 10, 1920, the Empire was reduced still further. Turkey cedes (1) Thrace, west of the Chatalja line, and excepting only the Derkos water supply area, to Greece, as well as Tenedos and Imbros, and the Islands in the Aegean occupied by Greece; (2) Smyrna with the surrounding strip, is to be administered by Greece, under Turkish sovereignty, for 5 years, after which the territory may annex itself to Greece by plebiscite; (3) Mesopotamia (Iraq), Palestine, Syria, Armenia and the Hejaz become independent, the first three under mandatories; (4) Kurdistan has autonomy conferred upon it; (5) Castellorizo and the Dodecanese are ceded to Italy. Turkey retains Constantinople, but the coastal area of the Dardanelles, the Marmora and the Bosporus are placed under the control of a "Commission of the Straits" appointed from the League of Nations. In the revised form of the Treaty (March, 1921), Turkey was granted certain concessions, a considerable reduction of the demilitarised zone in the Straits, compromise on the question of Smyrna, and a substantial rearrangement of the financial clauses of the Treaty. But since the concessions were suggested, hostilities broke out between Greece and Turkey whereby Turkey regains the Smyrna area in Asia Minor and European Turkey as occupied by Greece. November 3, 1922, a republic was proclaimed by the Turkish Nationalists with the capital at Angora.

WEIHAIWEI.

Area: 285 square miles. Population: 147,177.
Population per square mile: 516.4.

In the Chinese province of Shantung, with the adjacent waters, was leased to Great Britain, July 1, 1898. It is used as a flying naval base and as a depot, exercising ground and sanitarium for the China squadron. The leased territory consists of rocky hill ranges with fertile valleys, and is most picturesque. The inhabitants are generally well-to-do. Cereals, vegetables and grapes are grown. Rope and line making, boat building and stone cutting are carried on. It contains gold, but the mines are not now worked to any extent.

AFRICA

Area: 11,513,579 square miles. Population: 142,872,063.
Population per square mile: 12.4.

Africa is a vast continent of regular outline with but few bays or inland seas. It has been called the "birthplace of civilization," and, while its early history is filled with myth and fable, there are, nevertheless, marvelous truths which are more full of surpassing interest than the tales of romance. Here lived the Pharaohs and the Ptolemies, and here were the cities of Memphis and Thebes and Carthage. Here was the most massive architecture the world has ever known and here were many splendors of civilization. Much of its territory which should now be fertile and improved fields is but a hunting ground, and most of it has been divided among the European powers. The Atlas range of mountains, the mountains of the Moon, a few other elevations around the sources of the Nile and Kongo, and those which terminate in Cape of Good Hope, are the only mountains, but the great continent is distinguished for immense desert levels, the largest of which is that of Sahara, stretching from the northwest coast to the banks of the Nile, and occupying about one-fourth the entire continent. As much of it lower than the level of the Mediterranean engineers have proposed that it be flooded. Northwest of the "Transvaal" is the Kalihari desert. The Nile, Kongo, Niger, Orange and Zambesi are the largest rivers. The Nile gives to Egypt its exceeding fertility. In the equatorial part of Africa are six great lakes, the largest,. Albert Nyanza, being 360 miles long and 90 miles wide. It is customary to speak of the climate as the hottest and most moist of any to be found, and, while this is true of that portion along its equatorial girth, the temperature of the southern areas toward the cape does not materially differ from southwest U. S. Outside of the limited number of Europeans and their mixtures, there are four distinct types of inhabitants, Semetic and Hamitic to the north, and the Sudan and Bantu to the south, though no line of absolute demarcation can be found and their intermixture is most confusing. For its wild animals Africa has always been remarkable.

ABYSSINIA.

Area: 432,432 square miles. Population: 8,000,000.
Population per square mile: 16.2.

Abyssinia is an independent empire, south and southwest of Eritrea and British and French Somali, and contains the kingdoms of Tigre, Amhara, Lasta, Gojam and Shoa. Abyssinians claim their country was the Sheba of the Old Testament, that it turned to Judaism long before the Christian era, and that in the fourth century was converted to Christianity. Its early records indicate that the people enjoyed a high civilization in very remote times. In 1889 Italy laid claim to Abyssinia, but her armies were disastrously defeated, and in 1896 the European powers recognized the independence of the empire. The government is feudal and despotic. Education was restricted to clerical schools, but in 1907 was made compulsory on all males over the age of 12. It is one of the most mountainous countries, having an average elevation of 6,000 feet, and is a hunter's paradise, nearly all the wild animals common to Africa being found here. The cereals, ivory, gold dust, musk and coffee are exported. Abyssinia has 248 miles of railroad. There are many cities mostly of small size, and Adis Abbeba is the capital.

ALGERIA.

Area: 221,180 square miles. Population: 5,563,828.
Population per square mile: 258.

A French colony on the north coast of Africa, extending far into the Sahara desert, since 1834. Was the ancient Numidia and eastern Mauretania. The government is vested in a governor-general appointed from France. The native popualtion is entire Mussulman. The surface presents a varied aspect of fertile mountain tracts and valleys, high and partially barren plateaus, rugged mountains and unwatered desert sands. The best known oasis is Biskra, a military post and health resort, with a growth of over 200,000 date palm trees. During the Roman period Algeria was considered one of the granaries of the world. The orange, date, pomelo, citron, banana, pomegranate, almond, fig and many other fruits grow abundantly. The production of olive oil is an important industry. There are extensive fisheries for sardines, allaches, anchovies, sprats, tunnyfish, etc., and also shellfish. Mineral production includes iron, zinc, lead, mercury, copper, antimony and petrol. The capital is Algiers, an imposing amphitheater-like city, having wide streets and boulevards, splendid public buildings, important commerce, and has become a popular resort for tourists and invalids. Other important cities are Oran, Constantine, Bona, Tlemsen, Sidibel-Abbes, Mostagan, Mascara, Blida, Setif and Philippeville. There are 2,205 miles of railway open.

ANGLO-EGYPTIAN SUDAN.

Area: 1,014,400 square miles Population: 3,400,000.
Population per square mile: 3. Capital: Khartoum.

Anglo-Egyptian Sudan, or modern Ethiopia, is governed by a governor-general appointed by Egypt, accepted by England, assisted by a council. The territory comprises a considerable part of the Libyan desert. The country consists, for the most part, of sand and rocky tracts, and is inhabited by Arabs, nomadic tribes and Negroes. The atmosphere is dry and the summers hot. Much live stock is raised and there is some iron ore. Elephants and rhinoceros are still found. The Sudan is the chief source of the world's supply of gum arabic and ivory. Other products include cotton, ostrich feathers, dom palm nuts, dates, sesame, senna leaves and pods, ground nuts, hides, skins and gold. The principal grain crop is durra, a kind of millet, used for making bread. There are also rubber trees. Chief towns besides Khartoum, are Omdurman, Geili, Halfy, Merowi El Damer, Atbara, Port Sudan, Suakin, Kassala and El Obeid. There are 1,500 miles of railroad open.

ANGOLA.

Area: 484,800 square miles. Population: 4,119,000.
Population per square mile: 8.5. Capital: St. Paul de Loanda.

The colony has belonged to Portugal since 1575, with the exception of the years 1641 to 1648, when it was held by the Dutch. It is under a governor-general. Important towns besides the capital are Kabinda, Ambriz, Novo Redondo, Benguela, Mossamedes and Port Alexander. There are a few government schools, and various missions are at work in the country. The chief products are coffee, rubber, wax, sugar, vegetables oils, cocoanuts, ivory, oxen and fish. Minerals include gold, copper, iron, petroleum and salt. The length of railways open for traffic is 818 miles.

ASHANTI.

Population: 287,814.

Ashanti, now governed under direction of the governor of Gold Coast Colony, was originally the chief recruiting ground for the slave trade. It is mountainous, well watered, fertile and clothed with luxurious vegetation, producing choise fruits, vegetables, dye woods and palm oil. It exports gold dust, oil and valuable woods. It manufactures high grade sword blades, cotton goods and earthware. Accra is the capital.

BARBARY STATES.

Formerly the name of an extensive region, comprising all the northern portion of Africa from Egypt to the Atlantic Ocean, and from the Mediterranean to the Sahara Desert. It embraced Morocco, Algeria, Tunis, Tripoli, Fezzan and Barka.

BASUTOLAND.

Area: 11,716 square miles. Population: 404,507.
Population per square mile: 35. Capital: Maseru.

A British colony northeast of Cape Colony. It is governed by a Resident Commissioner. An elevated but rugged plateau well watered, and has a fine climate, and is stated to be the best grain producing country in South Africa, the abundant grass enables the Basutos to rear large herds of cattle. There are 16 miles of railway, and about 200 schools, mostly under direction of missionaries. It exports grain, cattle and wood.

BECHUANALAND.

Area: 275,000 square miles. Population: 125,350.
Population per square mile: 0.5. Capital: Serowe.*

A British Protectorate on both sides of the Kalihari desert with physical characteristics and climate similar to Rhodesia. Cattle rearing and agriculture are the chief industries.

The affairs of the protectorate are directed from Mafeking in the Cape Province.

BELGIAN CONGO.

Area: 909,654 square miles. Population Estimated 7,500,000.

Population per square mile: 0.5.

The Congo Independent State was founded in 1852 by Leopold II, king of the Belgians, and was annexed to Belgium in 1907. It is the most completely watered of the African regions, and supports over a large part of its area a magnificent and almost impenetrable forest. The chief commercial products are rubber, ivory, copal, palm kernels, palm oil and dyestuffs. Coffee, cacao and tobacco are successfully cultivated. The native languages comprise many dialects, every tribe having its own. The religion of the natives consists of a gross fetishism, but mission work is actively carried on. Minerals known to exist are gold, copper, coal, iron, tin and manganese. Under the management of American engineers, who use steam shovels and the latest American mining machinery, the Congo is becoming one of the world's greatest sources of copper. The Congo river is navigable for about 100 miles from its mouth to Matadi; above this, for over 200 miles, are numerous rapids to Stanley Pool (Leopoldville) Above the Pool there are about 1200 miles of navigable water, as far as Stanley Falls, while several of the great tributaries are navigable over a considerable extent of their course. The railways have 1,039 miles in operation. Elizabethville and Stanleyville are important places. The 1914-18 war settlement has added the highly desirable Urunda and Ruanda regions to the Belgian possessions. Belgian's African possessions are eighty times as large as Belgium itself and with a population but twice as large.

BRITISH SOMALILAND.

Area: 68,000 square miles. Population: 310,000.
Population per square mile: 4.6.

A British protectorate administered by a Commissioner. It is on the Gulf of Aden and is but little explored. The inhabitants are Mohammedans. Berbera is the capital. Chief products are skins and hides, gum and resins, ghee, cattle and sheep.

CAMEROON.

Area: 191,130 square miles. Population: 2,540,000.
Population per square mile: 13.3. Capital: Buea.

Extends from Nigeria to French Equatorial Africa. Lake Chad is its northern point. Was a former German protectorate. Acquired by Great Britain and France through treaty of peace in 1919. The British control about 33,000 square miles from the sea to Lake Chad on the Nigerian frontier. The population is mainly Bantu Negroes and very few whites. The country is fertile, the climate equatorial and very unhealthful along the coast which extends about 200 miles. The colony is rich in hardwood; ebony is abundant. Cattle rearing is carried on. Gold and iron have been found. There are 149 miles of railroads, and 150 more under construction. In November, 1915 Cameroon was occupied by French and British forces successfuly.

CAPE OF GOOD HOPE.

Area: 276,995 square miles. Population: 2,564,965.
Population per square mile: 9.2.

A British Province of the Union of South Africa. It occupies all the southern end of Africa below the Orange River. About one-third of the population is European and Protestant religion prevails, though there is no state church. There is a good educational system, though education is not compulsory. Except interior deserts the soil is generally fertile. All kinds of cereals are raised and many fruits: grapes are abundant. The coastal regions are wooded and well watered, but there are few streams in the interior. Stock and ostriches are a source of wealth. Copper, gold, coal and diamonds are principal exports. The Kimberley diamond fields are world famous and supply more than half the world's diamonds. There are 3,638 miles of railroad. Cape Town is the capital. Port Elizabeth, Kimberley, Beaconfield, Grahams Town, Paarl, King Williams Town, Graaff Reinet, Uitenhage, Cradock, Worcester and East London are all large cities. The climate is most heathful of any in Africa.

DAHOMEY.

Area: 24,000 square miles. Population: 900,000.
Population per square mile: 38.

Is under a French Governor. Togoland is on the west There are about 70 miles of coast The natives are pure Negro stock and Fetish worshippers, but are industrious, and the French are doing much to develop the country. Porto Novo is the capital. 6,226 miles of railway are open.

EGYPT

Area: 12,226 square miles.
Population: 12,750,918.
Population per square mile: 1,061.

The kingdom of Egypt, the Nile Valley and Delta, the total area including the Libian Desert; territory between the Red Sea and the Nile, the Sinai Peninsula, but excluding the Sudan, is about 350,000 square miles. On March 22, 1922, the English Protectorate was terminated and Egypt declared a free and sovereign kingdom, some minor questions of policy to be determined later on, as well as the status of the Sudan. The Protectorate then terminated was declared December 18, 1914, by Great Britain, as a war measure, deposing Abbas Hilmi, then Khedive, and naming Hussein Kamil as Sultan. The present government is under the Khedive, assisted by native department heads, under the guidance of Great Britain. There are two great areas, Upper Egypt and

Lower Egypt. The population is largely composed of Moslems who number about 12 million. Others are: Orthodox, 854,773; Jews, 60,000; Protestants, 48,000; Roman Catholics, 108,000; other Christians, 15,000. The Copts are natives who have been Christians (Orthodox Jacobite) since the first century. Their head is the Patriarch of Alexandria as the successor of St. Mark. Illiteracy prevails. Among the Moslems only 6 out of 1,000 females are educated, among the Christians and Jews the average for both male and female is about 55% illiterate. A year in Egypt brings three seasons of crops. Cereals sown in November and gathered May and June. Cotton, sugar, rice, planted in March, harvested in October and November. Rice, maize, millet and vegetables planted in July and reaped in September and October. In districts with constant irrigation there are two or three crops annually. Principal minerals: phosphate, rock, petroleum, nitrate shale. Railway mileage 3,033.

ERITREA

Area: 45,800 square miles. Population: 450,000.
Population per square mile: 9.8. Capital: Asmara.

An Italian colony on the coast of the Red Sea. Camels, oxen, sheep and goats are common, the produce consists of meat, hides and butter. Pearl fishing is carried on. Gold mines are worked. There are 178 miles of railway in the colony.

ER RIF

Er Rif, or the Spanish Zone of Morocco, is a strip some 200 miles in length on the Mediterranean, area 7,700 square miles, population approximately 600,000. The principal places are Tetuan (the capital), Laraiche, Alcazar and Arzila.

FRENCH EQUATORIAL AFRICA.

French Congo.

Area: 669,000 square miles. Population: 9,000,000.
Population per square mile: 13.4. Capital: Brazzaville.

Stretches north to Lake Chad and east to the British sphere of influence. It borders on territories of several European powers, and is governed by a Governor-General, assisted by Lieutenant Governors. About thirty colonial schools are scattered over the territory. The interior is densely wooded. The resources are not developed. There are 300 miles of railroad in operation.

Cameroon. The former German colony of Kamerun as a result of the war has passed largely to France, to the extent of about 273.759 square miles with a population of about two millions. The soil on the coast is fertile and various products of the soil are produced plentifully. Cocoa, coffee, rubber, gold and iron are among the leading products. Railway mileage, 149.

FRENCH GUINEA.

Area: 93.000 square miles. Population: 1,812,579.
Population per square mile: 19.

Is north of Sierra Leone. It is ruled by a French Lieutenant-Governor. It is not in an advanced state of civilization, and it has poor harbors. The principal product is rubber, palm oil and nuts, millet, gum and coffee. There are 412 miles of railway.

FRENCH SOMALI COAST (OBOCK).

Area: 5,790 square miles. Population: 208,000.
Population per square mile: 34. Capital: Jibuti.

Is a small extent of land at the southern extremity of the Red Sea. It is a Protectorate of the French Government. The exports are wax, coffee, hides, skins and ivory. The country has scarcely any industries, except coast fisheries. Salt mines are being worked. There are 192 miles of railway open.

FRENCH WEST AFRICA AND THE SAHARA.

Area: 1,478,000 square miles. Population: 12,061,315.
Population per square mile: 8.

Comprises Senegal, Guinea, Ivory Coast, Dahomey, Upper Senegal and Niger, and Mauritania. The Sahara is a desert region of a breadth of over a thousand miles and a length of two thousand. It is the largest desert in the world. The surface is greatly diversified, the average elevation being 1,300 feet. A mountain range separates it from the Libyan Desert. These deserts are covered with sands which shift when agitated by wind storms; but there are valleys and in the Libyan there are oases under clutivation, some of which support thousands of inhabitants. The deserts are traveled by caravans, sometimes of hundreds of men and animals. Thirteen hundred and seventy miles of railway are in operation. The inhabitants are Moors, Arabs and Berbers.

GAMBIA.

Area: 4,504 square miles. Population: 200,000.
Population per square mile: 44.

At the mouth of the Gambia River, together with a small territory on the banks of that stream, became a British Colony in 1888. Since then some adjacent lands have come under British rule. The Gambia is the only river in West Africa navigable by ocean steamers. It is a Crown Colony with an armed police force, but it is exclusively Mohammedan, there being not more than one white man to every 240 natives. The country is very unhealthful, but otherwise a sportsman's paradise. Nuts, hides, wax, rice, cotton and rubber are the products. Bathurst is the capital.

GERMAN WEST AFRICA (Former).

See Togoland.

GOLD COAST.

Gold Coast, Ashanti, Northern Territories.
Area: 80,000 square miles. Population: 1,505,086.
Population per square mile: 18.6. Capital: Aura.

Is a British Crown Colony extending 350 miles along the Gulf of Guinea. There are schools in charge of missionaries. The people are negroes and mostly pagan. Palm oil, gold, ivory, cotton, gum and rubber are chief exports. There are 192 miles of railway in the colony. Ashanti and the Northern Territories are under British protection.

GRAIN COAST.

That part of the coast of Liberia, Western Africa, which extends from about longtitude 8 deg. to 11 deg. west.

ITALIAN SOMALILAND.

Area: 139,430 square miles. Population: 650,000.
Population per square mile: 4.5. Capital: Mukdeesha.

The colony and protectorate of Italian Somaliland extends along the east coast of Africa from British Somaliland to the course of the Juba. The colony is administered by a civil governor. The principal occupation of the people is agriculture, cattle rearing, also camels and sheep. Exports are timber, hides, butter and durra. An important port is Brava.

IVORY COAST.

Area: 130,000 square miles. Population: 1,562,023.
Population per square mile: 13. Capital: Bingerville.

Stretches along the west coast on the Gulf of Guinea between the British Gold Coast, east, and Liberia, west. A French possession. Coffee is a valuable crop. The forests are rich in valuable woods and some gold is exported. One hundred and ninety-seven miles of railway are in operation.

KENYA (Former British East Africa).

Area: 246,822 square miles. Population: 2,807,000.
Capital: Nairobi.

An extensive equatorial territory in the eastern part of Africa. A large part of the surface is covered with grass, and well adapted for grazing purposes. Chief commercial products are ivory, rubber, gum-copal, hides, cattle and goats. The pevailing religious beliefs are pagan. There are government schools at some of the large towns. Slavery has been abolished. Gold has been discovered, and limestone is worked for building purposes. 618 miles of railway are in operation.

LIBERIA.

Area: 40,000 square miles. Population: 2,100,000.
Population per square mile: 55.2. Capital: Monrovia.

An African Republic with a constitution modeled after that of the United States. It is under the benevolent encouragement of the United States, whose early statesmen did much to establish it. There is universal suffrage, and it is occupied almost entirely by Negroes. All males from 16 to 50 are liable to military service. Coffee, cocoa, tapioca, sugar, ginger, oil, gold dust, ivory, hides and nuts are principal exports. The soil is productive, but cultivation is neglected. There are no railroads.

MAURETANIA.

Area: 344,967 square miles. Population: 262,051.

Was formed into a French Protectorate in January, 1909, and consists of the seven districts of Trarza, Brakna, Gorgol, Adrar, Guidimaka, Levrier Bay and Taganet. The population are nomad Moors..

MAURITIUS.

Area: 720 square miles. Population: 384,951.

An island in the Indian Ocean, 500 miles east of Madagascar. People are largely East Indian., Exports sugar, cocoanut oil and aloe fiber. Railway mileage, 119½.

MOROCCO.

Area: 231,500 square miles. Population: 6,000,000.
Population per square mile: 27.

Occupying the northwest corner of Africa, extends south and southeast to unknown boundaries. Much of its interior is unknown to civilized man. Under the Sultan it has been an absolute despotism. Under joint guidance of Spain and France, the Spanish field being on the north coast. Much of the interior is desert, but there are mountain regions believed to be rich in minerals. The soil is capable of agricultural production, but the methods in use are primitive. Vine growing is a promising enterprise; a great variety of fruit is grown. Fish of all kinds abound in Moroccan waters; more especially sardines and tunny. Mineral deposits are rich. Fez, Mequinez, Marakesh and Rabat are the four capitals. Tetuan, Tangier, Rabat, Dar-el-Beida, Mazagan and Mogador are the principal ports. Six hundred and four miles of railway have been laid, and others are under construction. The Sultan and his subjects are of the Malekite sect of Sunnite Mohammedans.

MOZAMBIQUE.

Portuguese East Africa.
Area: 428.132 square miles. Population: 3,120,000.
Population per square mile: 7½.

This Portuguese possession extends from Natal to German (now Kenya) East Africa on the north, along the Indian Ocean. It is under a governor appointed by Portugal. The inhabitants are Negroes of a low order and in the days of slavery furnished a large per cent of American slaves. In elevated districts, the climate is good, but it is dangerous along the coast. There are large interior forests. The Zambesi Valley here is very fertile. Corn, rice, wheat and tropical fruits are raised in abundance, and these, with ivory, skins, feathers, gold dust, tortoise shells, amber and gums are exported. There are 360 miles of railroad. Lourenco Marques is the capital of the province. The principal ports are Mozambique, Ibo, Quillimane, Chinda, Beira and Inhambane.

NATAL.

Area: 35,290 square miles. Population: 1,194,043.
Population per square mile: 33.8.

A British Province of the Union of South Africa, extending along the Indian Ocean Coast about 300 miles. There is universal suffrage with some property qualifications. All but about six per cent of its inhabitants are Kaffirs and their mixtures. Natal has a good school system, there being over 270 schools supported by the government. The coast region and river valleys are very fertile, the interior being adapted to grazing. The climate is excellent. There are abundant coal fields and iron ore is plentiful. Angora hair, arrowroot, coal, coffee, ginger, hides, wheat, oats, feathers, sugar, cereals, cattle, sheep, horses and goats are exported. There are 1,117 miles of railroad. Pietermaritzburg is the capital. Durban, Ladysmith and Newcastle are chief towns.

Zululand is the home of warlike tribes of Zulus, much above the ordinary African negroes. It is unhealthy, being flat and marshy, except in the interior, where it is more elevated, often rugged. Cotton, Sugar, ivory and rhinoceros horns are exported. There are no whites except missionaries.

NIGERIA.

Area: 336,000 square miles. Population: 17,000.000.
Population per square mile: 50.6. Capital: Lagos.

The British Crown Colony of Nigeria comprises the former powerful kingdoms of Bornu, Sokoto and Lagos, peopled by the Hausa race, industrious people and excellent mechanics, who send caravans to the Red and Mediterranean Seas. The coast is level and indented with bays. Most of the soil is fertile and palms, sugar, gums, corn, cotton, rice and inaigo are produced. Lake Chad, on its northwestern boundary, receives several large streams. Sheep, cattle, elephants and buffalo are raised. Silver, tin, lead, and other minerals are mined. Asaba, Old Calabar, Zungeru, Kuka, Kano, Yakoba, Gando, Wurno and Sokoto are important cities. There are 1,110 miles of railway in operation.

NYASALAND PROTECTORATE.

Area: 39,315 square miles. Population: 1,218,238.
Population per square mile. 31. Capital: Zomba.

This British Protectorate lies along the southern and western shores of Lake Nyasa, and extends towards the Zambezi. Is administered by a Governor and a Commander-in-Chief, assisted by an Executive and Legislative Council. Education is undertaken by missionary societies. Coffee, tobacco, cotton and tea are exported. Live stock is reared. There are about 200 miles of railway open, and more under construction. The climate is salubrious.

ORANGE FREE STATE.

Area: 50,389 square miles. Population: 528,174.
Population per square mile: 10.4. Capital: Bloemfontein.

Was founded by Boers between 1810 and 1820. It lost its independence in 1900 after the Boer War and is now a British Province of the Union of South Africa. It aided the Boers with an army of 22,000 men against the British. About a third of the inhabitants are white, and there are district schools. The prevailing religion is that of the Dutch Reformed Church. Physical features, products and industries are like those of Cape of Good Hope. Diamonds, garnets and coal are mined. There are 1,163 miles of railway. Chief towns, besides the capital, are: Bethlehem, Kroonstad, Springfontein, Heilbron and Fauresmith.

PORTUGUESE EAST AFRICA.

See Mozambique.

PORTUGUESE GUINEA.

Area: 13,940 square miles. Population: 289,000.
Population per square mile: 58.8 Capital: Bissau.

On the coast of Senegambia, entirely enclosed on the land by French Equatorial Africa. It includes the adjacent archipelago of Bissagos, with the island of Bolama. Chief commercial products are rubber, wax, oil, seeds, ivory and hides.

PRINCIPE AND SAINT THOMAS ISLANDS.

Area: 360 square miles. Population: 42,103.
Population per square mile: 117.

These islands constitute a Portuguese Province under the adminstration of a Governor. The islands are hilly, the soil volcanic, and the vegetation rich and various. Chief commercial products are cacao, coffee, rubber and cinchona. On St. Thomas island there is a railway 9 miles long.

RHODESIA.

Area: 440,000 square miles. Population: 1,699,400.
Population per square mile: 3.8

Rhodesia is the name for that part of Africa south and southwest of the Belgian Kongo. The Zambesi River divides this territory into two regions. Northern and Southern Rhodesia. The climate and physical features are like those of Transvaal Province. They are almost exclusively agricultural and pastoral countries, though some gold and other minerals are found. In Northern Rhodesia the liquor traffic is unlawful. There are 2,468 miles of railway. Salisbury is the capital of Southern Rhodesia. Livingstone is the capital of Northern Rhodesia. At Buluwayo and Umtali there are public libraries and hospitals.

Cecil Rhodes, who founded this territory, and endowed the Rhodes scholarships at Oxford, England, lies buried on a lonely eminence in Rhodesia, a place selected by himself.

RIO DE ORO AND ADRAR.

Area: 73,000 square miles. Population: 12,000.
Population per square mile: 0.16. Capital: Villa Cisneros.

Stretching southwards along the Sahara desert and coast from the southwestern fronties of Morocco; under the governorship of the Canary Islands. It is a Spanish colonial possession. Adrar is a large oasis of the Sahara. It produces salt, dates, grain and melons. Chief towns, Wadan, Weuft, Shingheti and Atar.

RIO MUNI OR SPANISH GUINEA

Area: 12,000 square miles. Population: 200,000.
Population per square: 16.6. Capital: Bata.

A spanish possession under a Sub-Governor. The coast region is low and marshy and contains vast forests. The vegetation is luxuriant, but there are no harbors, and the rivers are all inaccessible to vessels. The Pamwes are the principle tribe; there are Catholic and Americn Presbyterian missions at work among the natives. There are no railroads.

SAHARA.

See French West Africa

SENEGAL.

Area: 74,012 square miles. Population. 444,621.
Population per square mile: 19. Capital: Saint Louis.

North of British Gambia, has a French Governor. Here, also France is making great effort to develope the natural resources, which are largely agricultural. There are 600 miles of railroad. Native industries comprise weaving, pottery, brick making and jewelry. Rubber, kola and cocoanuts, gums, castor beans, corn and millet are exported.

SIERRA LEONE AND PROTECTORATE.

Area: 31,000 square miles. Population: 1,403,132.
Population per square mile: 45.3. Capital: Freetown.

A British Crown Colony since 1787, was made an asylum for Negroes freed from slave ships. It extends a Protectorate inland about 180 miles. Education is being advanced among the Negroes. The climate is not healthful and the soil not fertile. The products of kola nut, oil, gums and hides are exchanged for foreign goods in place of money. There are about 400 miles of railroad. Freetown is the greatest seaport of West Africa and a second-class coaling station, with an excellent harbor, fortified.

SLAVE COAST.

A geographical term for that portion of the Guinea Coast of Africa between the Lagos and Volta rivers. The slave trade was formerly largely followed here.

SOMALILAND PROTECTORATE.

Area about 68,000 square miles. Population about 300,000.

A British protectorate. Produces skins and hides gum, resin, cattle and sheep. Population nomadic, but some towns on the coast.

SOUTHWEST AFRICA.

Area: 322,200 square miles. Population: 94,372.
Governed by the Union of South Africa.

In South Africa the German possessions extended from Angola on the north to the Orange River and Cape of Good Hope boundary on the south, with Rhodesia n the east. It has 930 miles of coast line on the Atlantic and in the center of this is Walfisch Bay, a district of Cape Town Colony. In this territory there is kept a British military force on account of unrest among the natives. There are a few government and mission schools. The inhabitants are Bushmen, Bantus, Hottentots and Namaquas. Except along the coast, the country is mostly desert, but cattle, sheep and goats are extensively raised and some ivory, ostrich feathers and cattle are exported. The capital is Windhoek. There are 1,304 miles of railway open. On September 27, 1914, Gen. Botha successfully invaded German Southwest Africa.

SUEZ CANAL.

Is 103 miles long, including four miles of approach channels at the harbors, connecting the Mediterrianean with the Red Sea, opened for navigation November 17. 1869. The concession to the Suez Canal Company expires November 17, 1968. In 1918 5,085 vessels (including warships) passed through, with a tonnage of 20,033,884, and receipts of $16,499,355. It is controlled by Great Britain.

SWAZILAND.

Area: 6,678 square miles. Population: 99,959.
Population per square mile: 15.3. Capital Mba-bane.

A British possession, governored by a high commissioner. The agricultural products are tobacco, maize, millet, pumpkins, ground nuts, beans and sweet potatoes. Stock is reared in large quantities. The territory is rich in minerals. Zombode is an important town.

TANGANYIKA TERRITORY.

(Former German East Africa)

Area: 384,180. Population: 7,659,898

This is the name of a British controlled territory taken from Germany during the great war. The greater part of former German East Africa comes under this head. The Belgians having been awarded a small part bordering on Lake Tanganyika. Forest of mangrove, coco-palm, tamarind, etc., exist near the coast. The natives raise many cattle, sheep and goats. Among minerals are coal, iron, lead coppper, mica and salt and garnets in large quantities. There are about 1,000 miles of railway.

TANGIER

The district is an Internationalized Zone on the southern coast of the Straits of Gibraltar comprising an area of 140 square miles and a population of about 45,000. The city of Tangier is a seaport and principal trade center.

TOGOLAND

Became a German protectorate in 1884. Successfully occupied by British and French forces late in 1915 and acquired by Great Britain and France in 1919 by treaty of peace.

TRANSVAAL.

Area: 110.426 square miles. Population: 1,686,212.
Population per square mile: 15.3. Capital: Pretoria

A British Province of the Union of South Africa, was settled by the Boers who crossed the Vaal River and occupied the country north of it, calling is the Transvaal. The Boer War, resulted in Transvaal becoming a British Colony in 1899. Agriculture is in a high state of development and cattie, grain, hides, butter, feathers, ivory, etc., are exported. Wheat grown is of a superior quality. The discovery of the famous gold drifts of "the Rand" near Johannesburg has converted the Transvaal into one of the leading gold producing countries of the world. This was followed by the discovery of diamonds, as well as silver and other valuable minerals. This is the richest part of Africa yet discovered. The Dutch Reformed Church is the prevailing religion. Education, since the war, has been making good progress. There are many private English and mission schools. In addition to its agricultural and mineral resources, there are brick and lime kilns, saw mills, machine shops, mineral water and ice factories, tobacco factories, breweries and distilleries. 2,362 miles of railway are in operation. Pretoria is the capital, but Johannesburg is the principal city, situated in the center of the rich Witwatersrand gold fields.

TRIPOLI OR LIBYA.

Area: 406,000 square miles. Population: 529,176
Population per square mile: 1.3.

Tripoli fell under Turkish domination in the sixteenth century. In September, 1911, a quarrel broke out between Turkey and Italy, and the latter invaded Tripoli and established an army there. Tripoli was annexed to Italy, October 18, 1912. For adminstrative and military purposes the country is divided into two independent districts, Tripolitania and Cyrenaica, with their respective capitals at Tripoli and Benghazi, all under the jurisdiction of the minister of colonies. The summers are hot; winter brings much cool and even cold weather, and snow rest for short periods on the upper hill-sides. The greater portion of the interior is a sand and limestone plateau of moderate elevation, destitute of permanent water-courses. Products are wheat, barley, millet, Indian corn, date-palms, olives, oranges, pomegranates, lemons, figs, jujubes, apricots, plums and watermelons. The carob and lotus are indigenous. The inhabitants comprise Berbers, Moors, Arab Bedouins, Jews, and negroes. Besides Tripoli and Benghazi, other important places are Derna, Homs, Mesurata, Ghadanes, Murzuk and Ghat. Pasturage is abundant. 600 miles of railway are in operation, and more under construction, but the principal means of communication inland are caravans which follow long frequented routes.

TUNIS.

Area: 50,000 square miles. Population: 1,953,000.
Population per square mile: 39. Capital: Tunis.

Is east of Algeria and is a French Protectorate. It has French educational and judicial systems. The nominal ruler is the Bey. Agriculture is the chief industry, and large estates predominate. Nearly all kinds of cereals and tropical fruits are in abundance. There are fine marble, zinc and iron. Silk, woolen goods. carpets, rugs and attar of roses and jessamine are articles of manufacture. Fisheries are extensive; sardines, anchovies, allaches and tunny are caught. Tunis, the capital, has a larger foreign trade than any city on the south Mediterranean Coast. By means of the canal, which was opened in 1893, Tunis is directly accessible to ocean-going vessels. There are 1,428 miles of railway.

UGANDA.

Area: 110.300 square miles. Population: 3,318,271.
Population per square mile: 30.
British capital: Entebbe. Native capital: Mengo.

Is a British Protectorate. The people are half savage Fetish worshippers of the Masai Race. Mengo, on Lake Nyanza, is the only notable point. Cloth. brass, wire and tinned provisions are used for barter instead of money. The soil is very fertile. Commercial products are cotton, chillies, ghee, ground nuts, coffee, ivory, hides, skins, rubber and arrowroot. Iron, gold, mica, alum, graphite and coal shale are found. There are 62 miles of railway.

UNION OF SOUTH AFRICA.

Consists of the original provinces of Cape of Good Hope, Natal. Transvaal and Orange Free State. Capital: Cape Town.

Area: 473,096 square miles. Population: 5 973,394.

By the treaty of peace, German South West Africa goes to Union of South Africa. (See also under separate provinces.)

UPPER SENEGAL NIGER.

Area: 473,273 square miles. Population: 5,598,973.
Population per square mile: 12.

This French colony was formed in 1904 from the Territory of Senegambia and the Niger. It includes the valley of the Upper Senegal, more than two-thirds of the course of the Niger, the whole of the countries enclosed in the great Bend, and the Sahara to Algeria. There are 344 miles of railway in operation in the colony. Chief products are ground nuts, millet, corn, rice. cotton, rubber, kariti and cattle. The native industries comprise pottery, brick making, jewelry, weaving and leather making. The most important towns are Bamako, the capital, Sikasso, Segou, Kayes, Djenne, Timbuktu, Goundam, and Niro.

UPPER VOLTA.

A French colony in Africa with area of about 95,000 square miles, south of Upper Senegal Niger. Is situated within the bend of the Niger and is north of Dahomey, Togo-land and the Gold Coast. Capital, Ouaga-dongon with a population of 19,332. Its resources and industries are about the same as Upper Senegal Niger.

WALFISCH BAY.

Included in Cape of Good Hope Province.

ZANZIBAR PROTECTORATE.

Area: 1,020 square miles. Population: 196,733.
Population per square mile: 121.7. Capital: Zanzibar.

The Island of Zanzibar and the smaller Island of Pemba with some portion of the adjacent coast is under the Sultan of Zanzibar, but his authority is merged in the British Protectorate. There are native courts, but the British Government tries all cases concerning British subjects. The Mohammedan religion rules. Slavery was abolished in 1897. Rubber, ivory, spices and skins are the chief exports. The clove industry is the most important. Zanzibar, the capital, is a city of commercial importance. and one of the finest ports in Africa. There are 7 miles of railway on the island of Zanzibar.

AUSTRALIA

Area: 2,974,581 square miles. Population: 4,455,005.
Population per square mile: 1.65.

The continent island of the Commonwealth of Australia is 2,500 miles from east to west and 1,950 miles from north to south. Its coast line is over 8,000 miles long. From Cape York southward there is a mountain range called the Australian Alps, 1,700 miles long, with an average height of 1,500 feet. It nowhere reaches the snow-line. For many years it was a barrier to communication with the interior. There is also a corresponding mountain range on the west. Australia is remarkable for the absence of large rivers. The Murray and tributaries, the Darling and Lachlan, are the largest, though there are several others of more or less importance and of value for irrigation and mining. Both salt and fresh water lakes are numerous. Colonization was first attempted in 1788. the first colonies being penal institutions, a large share of the settlers being convicts. Wool is the commercial staple of the country. Gold was discovered in 1851. The botany of Australia is remarkable in being unlike any other part of the world. There are 400 different species of eucalyptus, some of great value; one species said to afford the tallest trees in the world. There are many evergreens, various oaks and acacias and large coniferous trees producing valuable timber, but there are few food plants or fruits. The animal life is remarkable. Nearly all marsupials are Australian. Except the wild dog, there are no carnivorous animals. For many years Australia suffered from a pest of rabbits, that destroyed crops and rendered agriculture precarious. Millions of rabbits have been rounded up and killed annually. Their extermination by disease has been successful. There are small monkeys, many kinds of bats, seals and the dugong. Of birds there are the black swan, emu and brush turkey, as well as parrots and some game birds. There are crocodiles and lizards and serpents, some of which are venomous. Sea and river fisheries are valuable. Railway mileage about 25,000. Whales are taken off the coasts. The commonwealth of Australia is made up of the self-governing states of New South Wales, Queensland, Victoria. Western Australia, South Australia and Tasmania. Legislative power is vested in a Federal Parliament, consisting of the King, represented by a Governor-General, a Senate and a House of Representatives. Each state has a governor, and a parliament of two houses.

NEW SOUTH WALES.

Area: 310,372 square miles. Population: 1,648,448.
Population per square mile: 5.3.

New South Wales became a British possession in 1788. Bounded on the north by Queensland, west by South Australia, south by Victoria, and east by Pacific Ocean. A range of rugged mountains runs north and south, but are in great part broken by rugged gorges and canons. It is a pastoral country of droughts and floods. in which semi-desert conditions are here and there emphasized. Most of the streams are dry during a considerable part of the year. The climate is not unhealthy. There are no severe frosts, and snow is unknown. Much of the soil is well adapted to cultivation. Principal products are wheat, Indian corn, barley, oats, potatoes, grasses, oranges, arrowroot, sugar cane, tobacco, wine, brandy and grapes. Live stock is largely exported. Education is compulsory between the ages of 6 and 14, and schools are plentiful. The University of Sydney was founded in 1850. Gold is found in all parts of New South Wales. There are some manufactures, and 4,825 miles of railway open to traffic. The capital of the commonwealth is located in the Federal District, Canberra, and substantial government buildings are erected, as well as other buildings. The capital of the province is Sydney, the oldest city in Australia, and occupies a site of rare beauty. The harbor is landlocked, and it is a city of great commercial importance. Other important towns are Newcastle, Broken Hill, Parramatta, Maitland, Goulburn, Granville, Lithgow, Bathurst and Auburn.

NORTHERN TERRITORY.

Area: 523.620 square miles. Population: 3,310.
Population per square mile: 0.007.

QUEENSLAND.

Area: 670,500 square miles. Population: 605,813.
Population per square mile: 0.9.

Queensland was a penal settlement till 1842. Is bounded on the north by the Pacific Ocean, Gulf of Carpentaria, on the west by Northen Territory, southwest by South Australia, south by New South Wales and on the east by the Pacific Ocean. A large part of the coast is shut off by the Great Barrier Reef, which lies off the land at a distance of from 30 to 90 miles. Ranges of mountains run parallel to the east coast, which gives rise to a number of small streams. The climate is warm and favorable to Europeans, the north half being in the torrid zone. The vegetation is rich and varied, and there is excellent timber. The banana is indigenous here; various fruits are cultivated. About one-half the area is still in natural forest. Mineral products are rich. Queensland is noted for its sheep walks and cattle runs, many of them of great extent. This is the home of the kangaroo. There are now 4,713 miles of railroad. Education is free and compulsory. Chief products are the cereals, wines, bananas. pineapples, oranges, tobacco, coffee, arrowroot, etc. The minerals include tin, copper, silver, lead, opal, bismuth, wolfram and manganese. Brisbane is the capital. Other important places are Rockhampton, Townsville, Maryborough, Gympie, Ipswich Toowoomba and Charters Towers.

SOUTH AUSTRALIA.

Area: 380,070 square miles. Population: 408,558.
Population per square mile: 1.1.

Founded in 1836, and bounded on the north by Northern Territory, west by Western Australia, south by the Great Australian Bight and on the east by Victoria, New South Wales and Queensland. The climate is generally healthful, but marked by a high degree of heat. Chief crop is wheat; barley and oats are produced in smaller quantities. Gold, silver and copper are mined. A large, or the greater part of the interior, is of a desert character. Adelaide is the capital. at the base of Mount Loftus; it is the seat of the University of Adelaide, and contains a fine botanical garden, government buildings, parliament houses, town hall and the South Australian Institute. Other important places are Wellington, Port Adelaide, Glenelg, Port Augusta, Gawler, Port Lincoln, Port Pirle and Hawker. There are 3,400 miles of railroad in operation. Education is secular, free and compulsory, and well advanced.

VICTORIA.

Area: 87,884 square miles. Population: 1.315,551.
Population per square mile: 14.8.

Was first settled in 1835, and was made a separate colony in 1851. Gold was discovered in 1851. It is bounded on the north by New South Wales, west by South Australia, south and east by the Southern and Pacific Oceans. The state is traversed for the greater part of its length by the Great Dividing Range, a continuation of the Australian Alps. The chief rivers are the Murray and the Goulburn, which are navigable for only a short distance. The climate is the mildest or most temperate of any section of Australia. Average rainfall is abundant. Here the eucalyptus trees attain proportions rivaled only by the sequoias of the western United States. The chief resources are mining and wool-raising. Education is secular, free and compulsory between the ages of 6 and 14, and schools are numerous. Chief products are wheat, oats, barley, potatoes, hay, wine, tobacco. fruits and live stock. Wool production is 102,000.000 pounds annually. Minerals include gold, coal. tin, gypsum, silver and antimony. About 12.000 miners are at work in the gold fields. The capital is Melbourne, one time capital of Australia, officially founded and named in 1837. It contains parliament buildings, treasury, law courts, mint, stock exchange, the royal theater, etc., a university, zoological and botanical gardens and observatory. Melbourne is the most important and the greatest emporium of trade in Australia. Other important places are Ballarat, Bendigo, Geelong, Warrnambool. Castlemaine, Maryborough, Hamilton, Mildura and Stawell. Victoria has 3,928 miles of railway.

WESTERN AUSTRALIA.

Area: 975,920 square miles. Population: 282,114.
Population per square mile: 0.28.

These coasts were visited in the sixteenth century. A convict settlement was established in King George's Sound in 1825, and free settlements were founded on Swan river about 1829. It is bounded on the east by the Northern Territory and South Australia, on the north and west by the Indian ocean, and on the south by the Southern ocean and the Great Australian Bight. The coast line has a number of deep indentations. The interior and greater part is a plateau of moderate altitude, 700 to 1.000 feet high. It forms part of the great Australian Plain, and it is nearly all a desert or sand covered plain, with dense scrubs of acacia and porcupine grass. The Swan river is the most important stream. The climate is hot in the northern parts and in the interior, but not unhealthy, and in the far south a generally agreeable temperature prevails. Chief products are wheat, oats, barley, hay, potatoes and fruits, lumber, live stock and wool, 26,000,000 pounds being exported annually. Minerals include gold, in mining which 13.020 men were employed, coal, copper, silver, lead and tin. There are 3,989 miles of railway in operation. The capital is Perth, which has a city hall, barracks, governor's palace. mechanics' institute, observatory, etc. Other important places are Kalgoorlie, Boulder, Albany. Bunbury, Geraldton, Northam and Coolgardie.

NEW GUINEA.

Area: 312,329 square miles. Population: 982,862.
Population per square mile: 3.1.

New Guinea, or Papua, is a large island lying north of Australia, from which it is separated by the Torres strait. The western part belongs to the Netherlands, the eastern half forms British New Guinea and Kaiser Wilhelms Land, the latter incorporated as part of New Guinea by the British.

NEW ZEALAND (The Dominion of)

Area: 104,047 square miles. Population: 1,099.449.
Population per square mile: 10.4.

Consists of North Island, South Island. Stewart's Island, and other islands. The group was discovered by Tasman in 1642, and was visited by Cook. The settlers have been often at war with the natives. The surface is generally mountainous, the chief industry is agriculture. The government is vested in a governor and a general assembly of two chambers. Leading products are wheat, oats, barley, hay and live stock. There are over 24,000,000 sheep in New Zealand. Minerals are gold, silver, coal, Kauri gum, manganese and antimony. There are 3.012 miles of railroad in operation. Education is well advanced. Wellington is the capital and has a number of notable buildings and is the seat of the Victoria University College. Other places of importance are Auckland, the former capital, and one of the chief ports, Christchurch, Dunedin, Invercargill, Wanganin, Napier, Tinraru and Palmerston. New Zealand has been given mandatory possession of the former German islands in that part of the Pacific.

TASMANIA.

Area: 26,215 square miles. Population: 196,757.
Population per square mile: 7.5.

Formerly Van Dieman's Land, now one of the original states of the Commonwealth of Australia. A British crown colony. The authority is vested in a governor, a legislative council and a house of assembly. Discovered by Tasman in 1642; was visited by Cook. Bass and others; was settled in 1803; and at first was a penal colony. The aborigines are extinct. The surface is largely mountainous or hilly. The climate is salubrious and delightful, the mildest and most equable in all Australasia, and very much like that of the south of England. Rainfall is abundant. Education is compulsory and is well advanced. Chief products are wheat, oats, potatoes and hay. Fruit culture is of great importance. About 2,000,000 sheep are on the island, producing 8,900,000 pounds of wool annually. The soil is rich in iron, tin, copper, galena, and there are large beds of coal; it contains the richest tin mine in the world. Gold, silver and copper are mined. There are 519 miles of railway in operation. Hobart is the capital, has many fine public buildings and is quite a manufacturing center. Launceston is another important place.

THE NATIONAL PARKS AT A GLANCE.

ADMINISTERED BY THE NATIONAL PARK SERVICE DEPARTMENT OF THE INTERIOR

Total number, 19; area, 10,859 square miles

Crater Lake	Oregon	D2	249 square miles	Lake of extraordinary blue in crater of extinct volcano—Sides 1,000 feet high—Interesting lava formations—Fine fishing.
General Grant	California	G2	4 square miles	Created to preserve the celebrated General Grant Tree, 35 feet in diameter—6 miles from Sequoia National park.
Glacier	Montana	B5	1,534 square miles	Rugged mountain region of unsurpassed Alpine character—250 glacier-fed lakes of romantic beauty—60 small glaciers—Precipices thousands of feet deep—Sensational scenery of marked individuality—Fine trout fishing.
Grand Canyon	Arizona	H5	958 square miles	The greatest example of erosion and the most sublime spectacle in the world—On Sentinel Point stands a memorial to John Powell the Canyon's first explorer.
Hawaii	Hawaii	L5	118 square miles	Three separate areas—Kilauea and Mauna Loa on Hawaii, Haleakala on Maui.
Hot Springs	Arkansas	J11	1½ square miles	46 hot springs possessing curative properties—Many hotels and boarding houses—20 bathhouses under public control.
Lafayett	Maine	K2	8 square miles	The group of granite mountains upon Mount Desert Island.
Lassen Volcanic	California	E2	124 square miles	Only active volcano in United States proper—Lassen Peak 10,465 feet—Cinder Cone 6,879 feet—Hot Springs—Mud geysers.
Mesa Verde	Colorado	H6	77 square miles	Most notable and best preserved pre-historic cliff dwellings in United States, if not in the world.
Mt. McKinley	Alaska	I1	2,200 square miles	Highest mountain in North America—Rises higher above surrounding country than any other mountain in the world.
Mount Rainier	Washington	B3	324 square miles	Largest accessible single peak glacier system—28 glaciers, some of large size—48 square miles of glacier, 50 to 500 feet thick—Wonderful sub-alpine wild flower fields.
Platt	Oklahoma	J10	1⅓ square miles	Many sulphur and other springs possessing medical value.
Rocky Mountain	Colorado	F7	397½ square miles	Heart of the Rockies—Snowy range, peaks 11,000 to 14,255 feet altitude—Remarkable records of glacial period—This park is considered the most accessible of our national parks as it is only about 50 miles in a straight line northwest of Denver.
Sequoia	California	H2	252 square miles	The Big Tree National Park—12,000 sequoia trees over 10 feet in diameter, some 25 to 36 feet in diameter—Towering mountain ranges—Startling precipices—Cave of considerable size.
Sullys Hill	North Dakota	C9	1¼ square miles	Small park with woods, streams and a lake; is an important wild-animal preserve.
Wind Cave	South Dakota	E8	17 square miles	Cavern having many miles of galleries and numerous chambers containing peculiar formations.
Yellowstone	Wyoming	D6	3,348 square miles	More geysers than in all rest of world together—Boiling springs—Mud volcanoes—Petrified forests—Grand Canyon of the Yellowstone, remarkable for gorgeous coloring—Large lakes—Many large streams and waterfalls—Vast wilderness, greatest wild-bird and animal preserve in world.
Yosemite	California	G2	1,125 square miles	Valley of world-famed beauty—Lofty cliffs—Romantic vistas—Many waterfalls of extraordinary height—3 groves of big trees—High Sierra—Waterwheel Falls—Good trout fishing.
Zion	Utah	G4	125 square miles	Magnificent gorge (Zion Canyon), depth 800 to 2,000 feet, with precipitous walls—Of great beauty and scenic interest.

NATIONAL MILITARY AND OTHER PARKS

ADMINISTERED BY THE WAR DEPARTMENT

Total number, 7; area, 22 square miles.

Antietam Battle Field—Maryland------------50 acres
Scene of one of the greatest battles of the Civil War.

Chickamauga & Chattanooga—Geo. & Tenn.–6,543 acres
Beautiful natural park—Embraces battle fields of Chickamauga and Missionary Ridge and scenes of other conflicts of the Civil War fought in the vicinity of Chattanooga during 1863.

Gettysburg—Pennsylvania ----------------2,451 acres
Beautiful natural park—Scene of Civil War combat—Probably better marked than any other battle field in the world.

Guilford Courthouse—North Carolina ------125 acres
Near Greensboro—Scene of one of the great battles of the Revolution; fought in 1781.

Lincoln's Birthplace—Kentucky -------------------
Contains the log cabin and part of the farm where Abraham Lincoln was born.

Shiloh—Tennessee ------------------------3,546 acres
Natural park embracing the battle field of Shiloh near Pittsburg Landing.

Vicksburg—Mississippi -------------------1,323 acres
Beautiful natural park—Scene of the siege and surrender of Vicksburg in 1863 during the Civil War.

NATIONAL MONUMENTS

ADMINISTERED BY THE NATIONAL PARK SERVICE, DEPARTMENT OF THE INTERIOR

Total number, 24; area, 1,815 square miles.

Capulin Mountain—New Mexico H7-------681 acres
Cinder cone of geologically recent formation.

Casa Grande—Arizona J5 -----------------480 acres
These ruins are one of the most noteworthy relics of a prehistoric age and people within the limits of the United States. Discovered in ruinous condition in 1694.

Chaco Canyon—New Mexico I6 --------20,629 acres
Numerous cliff-dweller ruins, including communal houses, in good condition and but little excavated.

Colorado—Colorado G6 ---------------13,883 acres
Many lofty monoliths, and is wonderful example of erosion, and of great scenic beauty and interest.

Devils Tower—Wyoming D8 -----------1,152 acres
Remarkable natural rock tower, of volcanic origin, 1,200 feet in height.

Dinosaur—Utah F6 ------------------------80 acres
Deposits of fossil remains of prehistoric animal life of great scientific interest.

El Morro—New Mexico I6-----------------240 acres
Enormous sandstone rock eroded in form of a castle, upon which inscriptions have been placed by early Spanish explorers. Contains cliff-dweller ruins. Of great historic, scenic, and ethnologic interest.

Gran Quivira—New Mexico J7 ------------560 acres
One of the most important of earliest Spanish mission ruins in the Southwest. Monument also contains pueblo ruins.

Katmai—Alaska J1 -----------------1,088,000 acres
Wonderland of great scientific interest in the study of volcanism. Phenomena exist upon a scale of great magnitude. Includes "Valley of Ten Thousand Smokes."

Lewis and Clark Cavern—Montana C5 ----160 acres
Immense limestone cavern of great scientific interest, magnificently decorated with stalactite formations. Now closed to public because of depredations by vandals.

Montezuma Castle—Arizona I5 ------------160 acres
Prehistoric cliff-dwelling ruin of unusual size situated in a niche in face of a vertical cliff. Of scenic and ethnologic interest.

Muir Woods—California F1 --------------295 acres
One of the most noted redwood groves in California, and was donated by Hon. William Kent, ex-Member of Congress. Located 7 miles from San Francisco.

Natural Bridges—Utah H6 --------------2,740 acres
Three natural bridges among largest examples of their kind. Largest ridge is 222 feet high, 65 feet thick at top of arch; arch is 28 feet wide; span, 261 feet; height of span, 157 feet. Other two slightly smaller.

Navajo—Arizona H5 --------------------360 acres
Numerous pueblo, or cliff-dweller ruins, in good preservation.

Papago Saguaro—Arizona J4 -----------2,050 acres
Splendid collection of characteristic desert flora and numerous pictographs. Interesting rock formations.

Petrified Forest—Arizona I5 -----------25,625 acres
Abundance of petrified coniferous trees, one of which forms a small natural bridge. Is of great scientific interest.

Pinnacles—California G2 ----------------2,080 acres
Many spirelike rock formations, 600 to 1,000 feet high, visible many miles, also numerous caves and other formations.

Rainbow Bridge—Utah H5 ----------------160 acres
Unique natural bridge of great scientific interest and symmetry. Height 309 feet above water, and span is 278 feet, in shape of rainbow.

Scotts Bluff—Nebraska F8 ------------2,053.83 acres
Region of historic and scientific interest. Many famous old trails traversed by the early pioneers in the winning of the West passed over and through this monument.

Shoshone Cavern—Wyoming D6 ----------210 acres
Cavern of considerable extent, near Cody.

Sitka—Alaska J2 ---------------------------57 acres
Park of great natural beauty, and historic interest as scene of massacre of Russians by Indians. Contains 16 totem poles of best native workmanship.

Tumacacori—Arizona K5 ------------------10 acres
Ruin of Franciscan mission dating from seventeenth century. Being restored by National Park Service as rapidly as funds permit.

Verendrye—North Dakota G8 ----------253.04 acres
Includes Crowhigh Butte, peculiar mountain formation, from which Explorer Verendrye first beheld territory beyond Missouri River.

Yucca House—Colorado H6---------------9.6 acres
Located on eastern slope of Sleeping Ute Mountain. Ruins of great archaeological value, relic of prehistoric inhabitants.

ADMINISTERED BY THE DEPARTMENT OF AGRICULTURE

Total number, 10; area, 509½ square miles.

Bandelier—New Mexico ----------------22,075 acres
Vast number of cliff-dweller ruins, with artificial caves, stone sculpture, and other relics of prehistoric life.

Devil Postpile—California ----------------800 acres
Spectacular mass of hexagonal basaltic columns, like an immense pile of posts. Said to rank with famous Giant's Causeway in Ireland.

Gila Cliff Dwellings—New Mexico --------160 acres
Numerous cliff-dweller ruins of much interest and in good preservation.

Jewel Cave—South Dakota --------------1,280 acres
Limestone cavern of much beauty and considerable extent, limits of which are as yet unknown.

Mount Olympus—Washington ---------299,370 acres
Contains many objects of great and unusual scientific interest, including many glaciers. Is summer range and breeding ground of the Olympic elk.

Old Kasaan—Alaska ---------------------38.3 acres
Abandoned Indian village in which there are numerous remarkable totem poles and other objects of historical interest.

Oregon Caves—Oregon -------------------480 acres
Extensive caves in limestone formation of much beauty; magnitude not entirely ascertained.

Tonto—Arizona ---------------------------640 acres
Numerous cliff-dweller ruins of much interest and in good preservation.

Walnut Canyon—Arizona ----------------960 acres
Contains cliff dwellings of much scientific and popular interest.

Wheeler—Colorado ----------------------300 acres
Of much interest from geological standpoint as example of eccentric erosion and extinct volcanic action. Of much scenic beauty.

ADMINISTERED BY THE WAR DEPARTMENT

Total number, 2; area, 6 acres.

Big Hole Battle Field—Montana -------------5 acres
Site of battlefield on which battle was fought Aug. 9, 1877, between a small force of United States troops and a much larger force of Nez Perce Indians, resulting in rout for the Indians.

Cabrillo—California --------------------------1 acre
Of historic interest because of discovery of the territory now partly embraced in the State of California by Juan Rodriguez Cabrillo, who at this point first sighted land on Sept. 28, 1542.

ORDINARY TRAVEL DISTANCES IN ENGLISH STATUTE MILES.

Between Capitals and other important places in the United States.

Most of the Distances here given including all the Distances between State Capitals are the Official Distances as used by the United States Postal Department.

CITY OF WASHINGTON

THE GEORGE F. CRAM COMPANY
Atlas Headquarters—Est. 1867
CHICAGO

GEOGRAPHICAL AND STREET DIVISIONS.

Washington is divided into four districts: Northeast, Southeast, Southwest and Northwest, radiating from the Capitol as a center, the dividing lines being North Capitol, East Capitol, South Capitol streets and a line drawn west through the Mall. The divisions are shown on the map by the red lines intersecting at the Capitol and by the large red letters on each division.

Northwest is the principal district, containing most business places, and is the one always understood unless another is designated.

Numbered streets extend north and south. Lettered streets extend east and west.

Each district has its own series of streets, with letters and numbers beginning from the Capitol.

Relative Sizes of the United States and The European Powers

ALL SHOWN ON SAME SCALE AND PROJECTION

European Russia is about one-half the area of the United States. Finland's 150,000 sq. m. is about 10% smaller than Oregon and Washington. Ukrainia's 250,000 sq. m. is about 15,000 sq. m. smaller than California and Oregon. France's 212,654 sq. m. is only about 10% smaller than New Mexico and Arizona. Poland's area about equals Louisiana, Mississippi, half of Arkansas and Oklahoma. Spain's 194,782 sq. m. cover about all of Ohio, West Virginia, half of Pennsylvania, Virginia and North Carolina, three-fourths of Kentucky and half of Tennessee. Germany's 170,826 sq. m. fit into Texas, leaving about 95,000 sq. m. uncovered. Great Britain and Ireland's 121,633 sq. m. nearly equals Wisconsin and Minnesota. Sweden with 173,035 sq. m. equals Pennsylvania, Maryland, North and South Carolina, West Virginia and New Jersey. Norway's 124,643 sq. m. easily cover New York, Pennsylvania and West Virginia. Italy's 110,632 sq. m. about equals Alabama and Florida. Jugo-Slavia's 101,244 sq. m. fall short by about 45,000 sq. m. of equalling Montana. Esthonia's 23,160, Latvia's 24,440, Lithuania's 36,532, Holland's 15,766, Belgium's 11,373, sq. m. all placed in California leave about one-third of the state open. Rumania's 122,282 and Bulgaria's 41,000 sq. m exceed North and South Dakota by about 15,000 sq. m. Czecho-Slovakia's 60,000, Austria's 33.000, and Hungary's 36,000 sq. m. fail by 31,000 sq. m. to cover Kansas and Nebraska. Greece's 41,933 and Albania's 11,317 sq. m., cover over one-half of Wyoming. Portugal's 35 490 sq. m. would fit nicely into Indiana. Switzerland with 15,976 sq. m. exceeds by about 1,400 sq. m. Massachussets, Rhode Island and Connecticut. Denmark's15,582 sq. m. is about one-fourth of Michigan.

The Relative Sizes of the United States and Their Possessions.

All on the Same Scale and Projection.

Alaska, with an area of 590,884 square miles, is a little over twice the size of Texas. The Philippine Islands, with an area of 115,026 square miles, is a little smaller than Montana. Hawaii is nearly as large as New Jersey and has an area of 6,499 square miles. Porto Rico has an area of 3,435 square miles. about half the size of Hawaii and one third larger than Delaware. Panama Canal Zone, area 474 square miles, about one third the size of Rhode Island; Guam, area 210 square miles, one sixth the size of Rhode Island, and the Tutuila Group of the Samoan Islands is 77 square miles in area, about one third the size of Guam

MAP OF
The Leading Racial
GROUPS OF
EUROPE

THE GEORGE F. CRAM COMPANY
Atlas Headquarters—Est. 1867
CHICAGO.

This Map has been prepared by F. W. Rawcliffe, Pofessor of History in the Cicero, Illinois Public Schools.

It aims to show, in a general way, the exceedingly complex racial situation of Europe. There are in the continent five great ethnic groups: Turanian, Semite, Slav, Greco-Latin and Teuton. Of these the second cannot be localized. The Turanians (or Ural-Altaic stock) comprise Turks, Tartars, Magyars (Hungarians), Finns and Lapps. The Slavs include Russians, Poles, Czecho-Slovaks, Jugo-Slavs, Serbs and Montenegrins. The Bulgars are generally classed with the Slavs, though, originally, they were Turanians The Greco-Latins are the Greeks, Roumanians, Italians, Spanish, Portuguese, French and a section of the population in Switzerland and in Belgium. The Teutons are shown in three divisions: Germans, Scandinavians, (including the Dutch) and Anglo-Celts (these include all people of English speech). The Lithuanians are distinct from the great groups, though allied, linguistically, to the Aryans, to which family nearly all Europeans belong. Included with the Lithuanians are the Esths and the Letts. The Basques are a pre-Aryan people, the oldest stock in Europe. This grouping is chiefly linguistic, though other ethnologic factors have been considered in making the classification.

A CHRONOLOGICAL STORY OF THE WAR

The following pages have been carefully prepared with a view to relating the story of the Great World's War, in brief, from the beginning of hostilities, by the Germans, in the attack on the forts before the city of Liege in Belgium, to its final determination at Sedan by the "unconditional surrender" of the German armies, and the unqualified submission of the German military power to the terms of the Allies granted in the armistice which followed.

In these pages will be seen the progress of the war on Land, Sea and in the Air as the events occurred all through the long four years of almost continuous battles.

ITALIAN-AUSTRIAN FRONT

George F. Cram Company, Engravers and Publishers, Chicago, Ill.

"Gas" Holding the Line.

EVENTS OF 1914

June 28—Archduke, crown prince of Austria and his wife, the archduchess, assassinated in Sarajevo, Bosnia.

July 23—Austria sent ultimatum to Serbia, demanding the suppression of all anti-Austrian societies and punishment of all concerned in the assassination of the archduke, reply to be sent in 48 hours.

July 24—Serbia asks extension of time, which, being refused, a reply is sent which the Austrian minister declares is unsatisfactory and leaves the Serbian capital.

July 27—The Kaiser returns to Berlin from a trip to Norway. British foreign minister asks for a conference of Germany, France, Great Britain and Italy. German reply was unsatisfactory.

July 28—Austria-Hungary declares war on Serbia and began bombardment of Belgrade. Czar calls reservists to colors.

July 31—Germany demands Russia ceases to mobilize army. New York stock exchange closes.

Aug. 1—Germany declares war on Russia and begins mobilizing her army. Requests France to state her intentions. France proceeds to mobilize her army.

Aug. 2—German troops enter France at Cirey, and enter Luxemburg against protest. Germany asks Belgium for free passage for her troops, which is refused.

Aug. 3—Germany declares war on France. British fleet mobilizes. France declares martial law. German troops approach Belgium and Belgium asks aid of Great Britain.

Aug. 4—Great Britain sends ultimatum demanding that Germany respect neutrality of Belgium. Germany rejects ultimatum and war is declared between Great Britain and Germany. British army mobilized. France declares war on Germany. Germany declares war on Belgium.

Aug. 5—German-American cable cut. Germans attack Belgian forts at Liege. German mine laying ship sunk by British. Canada calls for volunteers.

Aug. 6—Austria declares war on Russia. French army placed under command of Marshal Joffre. British cruiser sunk by German mine. Germans defeated with great loss in attack on Liege forts.

Aug. 7—Germans defeated by the French at Altkirch. British seize South Togoland.

Aug. 8—French troops enter Alsace-Lorraine. Germany captures Liege. British troops land in France.

Aug. 9—German submarine sunk by British cruiser. Germans try to compromise with Belgians.

Aug. 10—France declares war on Austria. Battle between German and French troops at Muelhausen. Serbian troops invade Bosnia.

Aug. 11—French defeated at Muelhausen. Serbians take Sarajevo. Russians invade Galicia.

Aug. 12—Great Britain declares war on Austria. Battle between Belgians and Germans at Hasselt. Germany sells cruisers Goeben and Breslau to Turkey. Montenegro declares war on Germany.

Aug. 13—French take passes in the Vosges. Belgium again refuses Germany permission to pass through her country.

Aug. 15—General French arrives in France and takes command of British forces. Japan demands Germany withdraw her warships from Japanese and Chinese waters and remove her garrison from Kiaochow by Aug. 23. Russia offers autonomy to Poland.

Aug. 16—United States sends ships to bring home Americans.

Aug. 17—Belgian seat of government moved from Brussels to Antwerp. Liege forts destroyed by large caliber German guns.

Aug. 18—Germans march on Brussels.

Aug. 20—Germans take Brussels without a battle. Belgian army retires toward Antwerp. French recapture Muelhausen. Germans destroy part of the Belgian city of Louvain. Russians win battle at Lyck.

Aug. 21—Serbians drive Austrians from Dvina River. Forts at Namur bombarded by Germans. Russian victory at Gumbinnen.

Aug. 22—Advance of Germans in Belgium, fighting from Namur to Charleroi. Serbians win 4 days' battle near Lasnitza.

Aug. 23—Germany having made no reply to the ultimatum of Japan, Japan declares war on Germany and sends forces to Kiaochow. Germans occupy Luneville, France, and advance towards Lille.

Aug. 24—Japanese warships bombard Germans at Tsingtao. Russians defeat Germans in east Prussia. British and French forces defeated from Marne to the Moselle.

Aug. 25—Austria and Japan break diplomatic relations. French evacuate Muelhausen. German Zeppelin drops bombs on Antwerp, killing citizens.

Aug. 26—Ministers of foreign powers protest against dropping bombs over cities. Belgium enters protest to the United States. British marines land at Ostend. German Togoland surrenders to the British.

Aug. 27—Russian advance in East Prussia continues. German inhabitants flee. Russians march on Lemberg. Austria declares war on Belgium. Longwy fortress captured by Germans. French retreat from Lille and Valenciennes. Japan blockades Kiaochow. German cruiser Magdeburg sunk in Gulf of Finland.

Aug. 28—General Von Kluck defeats French near Maubeuge. French and Belgian forces defeated between the Sambre and Meuse rivers. Naval battle near Helgoland. British sink 2 German cruisers and 2 torpedo boats. German planes drop bombs again on Antwerp.

Aug. 29—Russians defeated in battle in East Prussia. Advance of Germans to within 65 miles of Paris. New Zealand takes German Samoan Islands.

Aug. 30—German airplanes drop bombs on Paris. Germans capture Amiens.

Sept. 1—Left wing of Allies retreats in France. Zeppelins drop bombs on Paris and Antwerp. Germans win second battle in East Prussia and capture many Russian prisoners.

Sept. 2—French transfer seat of government from Paris to Bordeaux. Russians capture Lemberg.

Sept. 3—Paris proclaims martial law. Germans reach the Marne.

Sept. 4—Germans cross the Marne and attack the French center.

Sept. 5—England, France and Russia sign agreement not to conclude a separate peace. Germans take Reims. Russians defeat Austrian army in the Carpathians. Allies make a surprise attack on the Germans at the Marne.

Sept. 7—Battle of the Marne won by the Allies and German army driven back to the Aisne where they began trench warfare by digging themselves in.

Sept. 8—Allies drive Germans along line of Ourcq and Petit-Morin rivers.

Sept. 9—Allies continue battle of the Marne. 60,000 Indian soldiers arrive in France. Japan lands forces at Lunkow to attack the Germans.

Sept. 10—Allied forces drive Germans back in continuation of battle of the Marne 37 miles in the four days. Russians suffer reverses in East Prussia.

Sept. 11—Germans still retreating in France. Russians win in Galicia.

Chemin des Dames and the Aisne.

Sept. 12—Germans retreat from Amiens and Lille. Serbians capture Semlin in Hungary.

Sept. 13—Germans digging in along the Aisne from Noyon to near Verdun.

Sept. 14—Allies attack the Germans on the Aisne, but cannot pass the trenches.

Sept. 15—Battle of Soissons. Germans hurry reinforcements to France.

Sept. 16—List of German atrocities presented to President Wilson by Belgian citizens.

Sept. 17—Battle rages from Noyon to the Meuse River.

Sept. 18—Germans damage famous cathedral at Reims with shells. Battle of the Aisne continues.

Sept. 19—Aisne battle develops into trench fighting.

Sept. 20—Russians capture Jaroslau and attack Przemysl. Hindenburg begins another offensive against the Russians.

Sept. 21 — Serbians defeat Austrians Crown Prince. Germans begin the attack on Antwerp, bombarding the forts. Battle of Craonne, east of Soissons.

Sept. 22—Three British cruisers torpedoed and sunk in the North Sea by German submarines; great loss of life of British sailors. Germans capture Craonne.

Sept. 23—British aviators drop bombs on Zeppelin plant at Dusseldorf.

Sept. 24—Canada sends 32,000 troops to England. Russians take Soldau and march on Krakow.

Sept. 25—Allies attack Germans at St. Quentin, but are repulsed.

Sept. 26—French gain in the Woevre. Germans cross the Meuse at St. Mihiel. Japanese begin attack on Germans at Kiaochow.

Sept. 27—Germans drop bombs on Paris and place heavy siege guns for continuing attack on Antwerp. German advance into Poland checked.

Sept. 28—Gen. Hindenburg driven out of Poland.

Sept. 29—Bombardment of Antwerp's outer forts.

Sept. 30—The Czar prohibits the sale of vodka, the same to continue after the war.

Oct. 1—Germans continue attack on Antwerp forts.

Oct. 3—Outer defenses of Antwerp taken and forts destroyed by German heavy guns. Battle rages at Roye. Russians fight the combined Austrian and German armies along entire line from Krakow to near the Baltic.

Oct. 5—Japanese squadron seizes German naval base in Marshall archipelago. Russians defeat Germans in East Prussia.

Oct. 6—Battle for Lille. German torpedo boat sunk by British.

Oct. 7—Belgian government moves to Ostend.

Oct. 8—Germans bombard the city of Antwerp, killing many citizens, and drop bombs on Paris as well as on oil tanks at Antwerp.

Oct. 9—Antwerp finally captured by the Germans; many people flee to Holland. Belgian King Albert escapes with his army.

Oct. 10—Germans enter Antwerp in force.

Oct. 11—Four people are killed and 20 wounded in Paris by Zeppelin bombs.

Oct. 12—German troops capture Ghent and march toward Ostend. Belgian government moved to Havre, France.

Oct. 13—Battles begin near Ypres and Dixmude. Germans retake Lille.

Oct. 14—Germans occupy Bruges. Russian army in Galicia meets reverses.

Oct. 15—Germans capture Ostend and French retake Muelhausen and Altkirch.

Oct. 16—British cruiser sunk by German submarine. Germans capture Zeebrugge. Allies retake Armentieres. Fighting going on from Ypres to Nieuport.

Oct. 17—German attack on Dunkirk stopped. Four German ships sunk by British cruisers. Japanese cruiser sunk at Kiaochow.

Oct. 19—Allies check Germans in attempt to take Dixmude.

Oct. 20—Battles fought along the Yser and on the Meuse near Verdun.

Oct. 21—British battleships bombard Germans along the coast from Ostend to Zeebrugge. Russians defeat German army in Poland.

Oct. 23—Russians win battles along Vistula River.

Oct. 24—Germans cross Yser canal.

Oct. 27—Battle between La Bassee and the Somme River. British dreadnought Audacious sunk by mine. Gen. DeWet and Gen. Beyers join a revolt of the Dutch Boers in South Africa.

Oct. 28—Fighting ceases in Flanders. Russians drive Germans from Warsaw.

Oct. 29—Turkey begins hostilities against Russia. Rebellion in South Africa put down.

Oct. 30—Belgians flood the Yser valley; many Germans drowned.

Oct. 31—Battle between French and Germans near Verdun.

Nov. 1—British defeated in naval battle off coast of Chile losing three vessels, one only escaped, badly disabled.

Nov. 2—North Sea declared in war zone and dangerous to merchant vessels.

Nov. 5—Fighting around Ypres recommences.

Nov. 6—Russians capture Jaroslau and take 5,000 prisoners.

Nov. 7—British and Japanese capture Tsingtao.

Nov. 8—Gen Beyers defeated in South Africa.

Nov. 9—Germans bombard Ypres, setting it on fire. German cruiser Emden driven ashore at Cocos Island and destroyed by an Australian cruiser, the Sydney.

FACTS AND FIGURES OF THE GREAT WAR 1914-1918

AMERICAN EFFORT IN WAR

Total armed forces	4,800,000
Total men in the army	4,000,000
Men who went overseas	2,086,000
Men who fought in France	1,390,000
Greatest number sent in one month	306,000
Greatest number returning in one month	333,000
Tons of supplies shipped to France	7,500,000
Total registered in draft	24,234,021
Total draft inductions	2,810,296
Greatest number inducted in one month	400,000
Graduates of line officers' training school	80,468
Cost of war to April 30, 1919	$21,850,000,000
Cost of army to April 30, 1919	$13,930,000,000
Battles fought by American troops	13
Months of American participation in the war	19
Days of battle	200
Days of duration of Meuse-Argonne battle	47
Americans in Meuse-Argonne battle	1,200,000
American casualties in Meuse-Argonne battle	120,000
American battle deaths in war	50,000
American wounded in war	236,000
American deaths from disease	56,991
Total deaths in the army	112,422

AMERICAN CASUALTIES IN THE WAR

The war department on Sept. 1 issued its final report on the casualties of the American army in the European war. These included casualties in the Archangel and Vladivostok expeditions and were as follows:

Killed in action	35,585
Died of wounds	14,742
Total battle deaths	50,327
Died of disease	58,073
Died from accident, etc.	8,092
Total all deaths	116,492
Wounded in action	205,690
Total casualties	322,182

MEN REGISTERED AND INDUCTED

Registration.	Registered.	Inducted.
First and second	10,679,814	2,666,867
Third	13,228,762	120,157
Alaska, Hawaii, Porto Rico	325,445	23,272
Total	24,234,021	2,810,296

AMERICAN MERCHANT VESSELS SUNK BY ENEMY

Prior to April 6, 1917

	No.	Gross tons.
Torpedoed	6	25,988
Mined	5	11,579
Gunfire, etc.	8	29,576
Total	19	67,143

April 6, 1917, to Nov. 11, 1918

	No.	Gross tons.
Torpedoed	45	190,357
Mined	2	8,116
Gunfire, etc.	79	88,833
Total	126	287,306
Grand total	145	354,449

In the destruction of these vessels a total of 775 lives were lost—703 by torpedoes, 38 by gunfire and 34 by drifting mines. Sixty-seven lives were lost prior to April 6, 1917, when America entered the war.

CASUALTIES AND HEALTH

The war was undoubtedly the bloodiest which has ever been fought. One possible competitor might be the Crimean war, in which the casualty rate per 100 men was equally heavy. The British forces in the Crimean war lost twenty-two of every 100 men, the French thirty-one, the Turkish twenty-seven and the Russian forty-three. More than four-fifths of the losses were, however, deaths from disease, while in the recent war with Germany disease deaths were inconsiderable as compared with battle deaths. The forces engaged in the Crimean war were, moreover, much smaller.

WAR EXPENSES OF ALL NATIONS

The following table gives the war expenditures of all nations up to May, 1919. The figures are believed to be substantially reliable:

Country.	Amount.
Great Britain and dominions	$ 38,000,000,000
France	26,000,000,000
United States	22,000,000,000
Russia	18,000,000,000
Belgium, Roumania, Portugal, Jugo Slavia	5,000,000,000
Italy	13,000,000,000
Japan and Greece	1,000,000,000
Total allies and U. S.	$123,000,000,000
Germany	39,000,000,000
Austria-Hungary	21,000,000,000
Turkey and Bulgaria	3,000,000,000
Total central empires	$ 63,000,000,000
Grand total	186,000,000,000

Battle Deaths in World War, 1914-1918

Russia	1,700,000
Germany	1,600,000
France	1,385,300
Great Britain	900,000
Austria	800,000
Italy	330 000

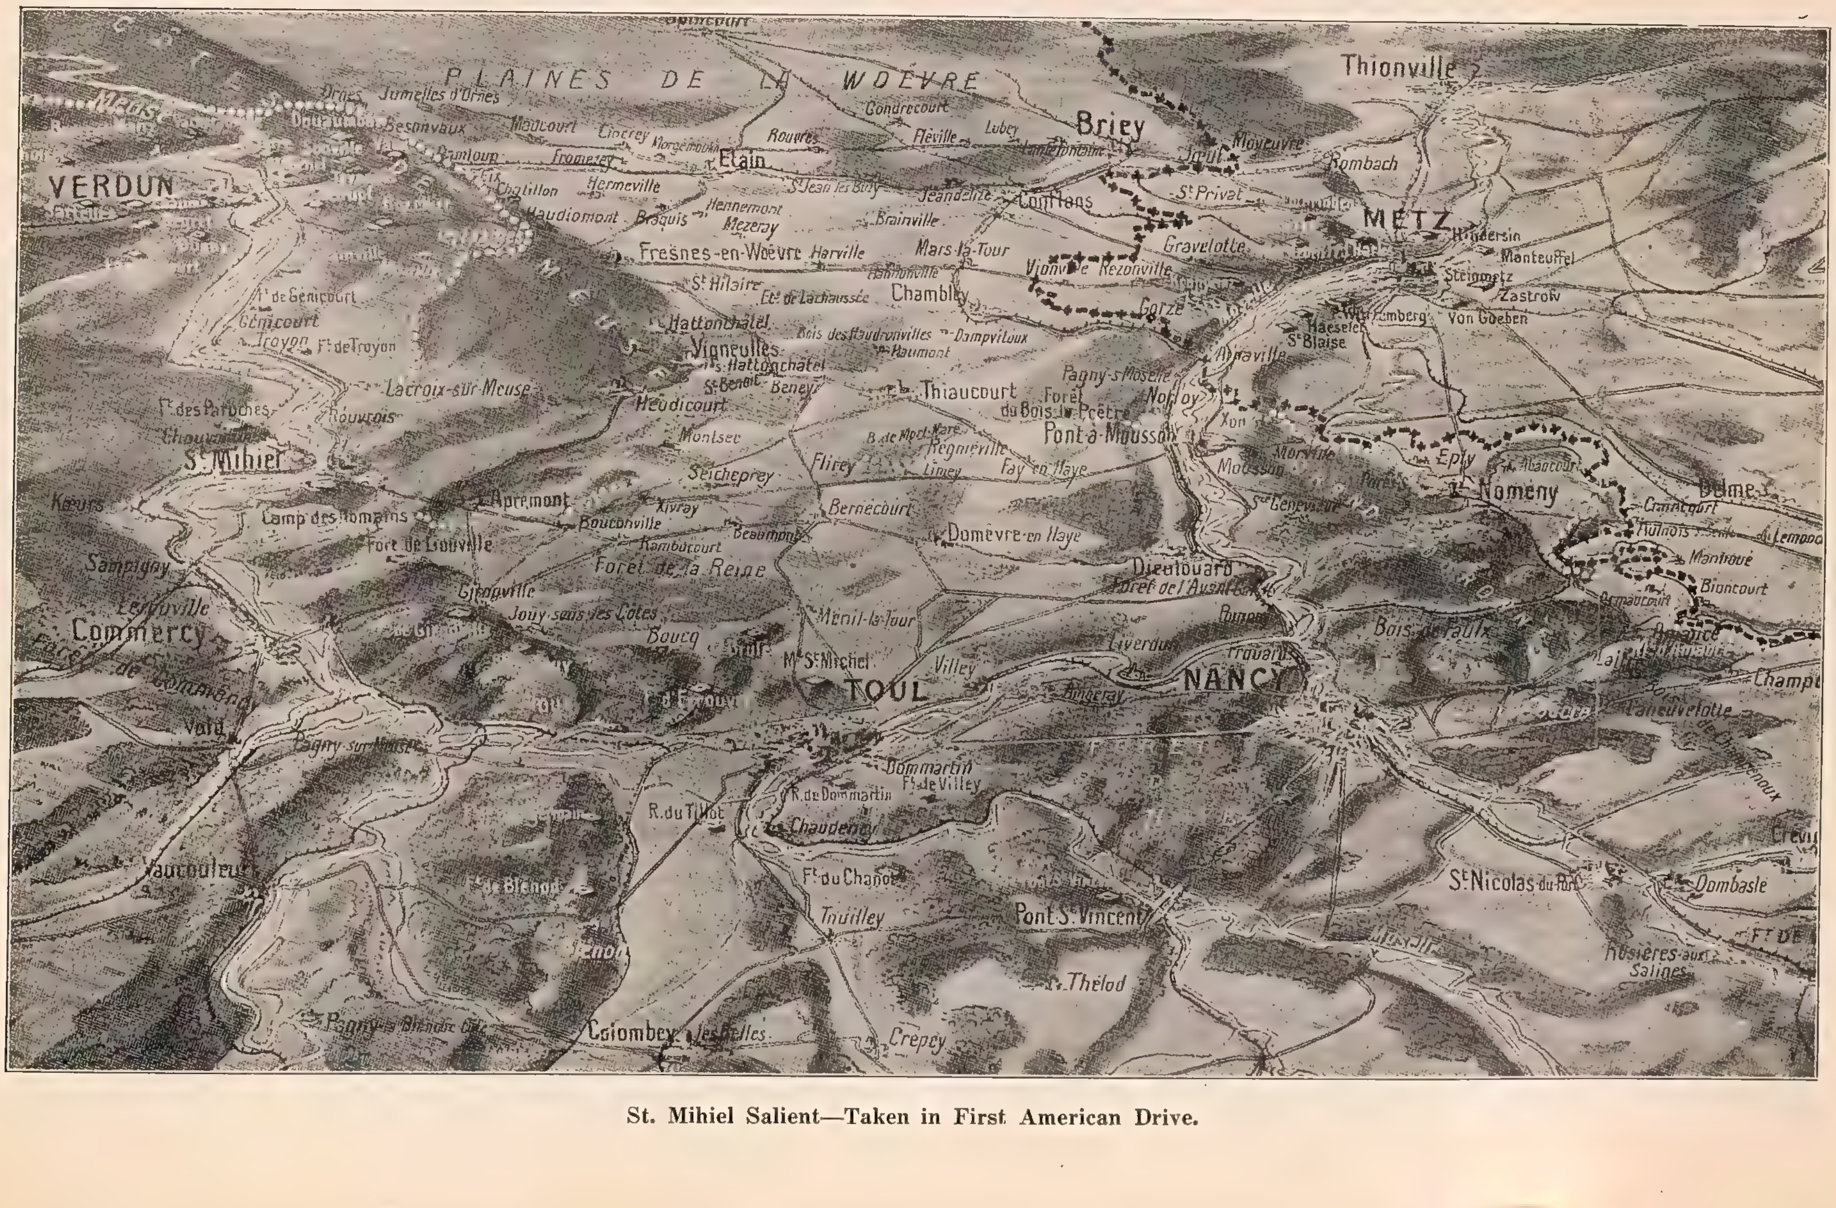
Total	7,450,200



St. Mihiel Salient—Taken in First American Drive.

GEOGRAPHICAL CHANGES

CAUSED BY THE WORLD WAR AND RECENT AGREEMENTS

ALBANIA. Independence of Albania proclaimed June 3, 1917, by Italian Government, and Allied Council upheld same in 1920, with boundaries same as those prior to World War in 1914.

ALSACE-LORRAINE, formerly French Territory, acquired by Germany in 1871, restored to France.

ANATOLIA, comprises the greatest part of Turkey, in Asia Minor.

ARMENIA. Independence was proclaimed December 31, 1918, and all nations notified. November, 1922, it became a part of the Allied Soviet Republics.

AUSTRO-HUNGARIAN EMPIRE. Dismembered and redistributed. Austria proper becomes a republic. Hungary proper remains a kingdom. Remaining territory divided as follows: To Czechoslovakia; Bohemia, Moravia, Silesia, Slovakia, Ruthenia, and other small districts. To Italy; Trentino, Gorizia, Istria, Zara, Dalmatia, and Adriatic Islands. To Yugoslavia; Croatia, Slovenia, Bosnia, Herzegovina, part of Dalmatia, and Adriatic Islands. To Roumania; Bukovina and Transylvania. To Poland; Austrian Poland and Eastern Galicia. Liechtenstein becomes independent.

AUSTRIA, Vorarlberg, northern and eastern part of Tyrol, Salzburg, Upper and Lower Austria, Carinthia and part of Styria form the new Republic of Austria.

AZERBAIJAN was proclaimed an independent republic May 28, 1918, and affiliated with the Allied Soviet Republics, November, 1922.

BELGIUM acquires Eupen and Malmedy from Germany and the restoration of Moresnet.

BESSARABIA restored to Rumania.

BISMARCK ARCHIPELAGO under mandate of Australia. Name changed to New Britain Archipelago.

BULGARIA, the south part of (Thrace) Bulgaria on the Aegean Sea awarded to Greece.

CAMEROONS (Kamerun), Africa, divided between France and Great Britain.

CAROLINE ISLANDS under Japan Mandate.

CONSTANTINOPLE and the area east of the Podima-Kalikratia line in the neutral zone.

CZECHOSLOVAKIA, Bohemia, Moravia, Austrian Silesia, and part of Hungary (Slovakia) forming Czechoslovakia. Prague is capital of this new republic.

DALMATIA. All of this territory given to Yugoslavia, with the exception of the city of Zara, with a 6-mile radius from sea coast, which was given to Italy.

DANZIG, the Free City of Danzig, with surrounding territory, internationalized.

DARDANELLES and Bosporous, Turkey east of the Podima-Kalikratia line, Gallipoli peninsula south of Balka-Bulair line, and a strip in Asia along the Dardanelles, the Marmora Sea and the Bosporous, in neutral zone.

DENMARK, Northern part of Schleswig-Holstein, to Denmark. Decided by plebsicite.

EAST AFRICA, a former German Colony, partly under British and partly under Belgian Mandates. The official designation of this territory is Tanganyika Territory.

EGYPT, British Protectorate declared December 18, 1914, acknowledged in Treaty of Peace, 1919. Protectorate was terminated by British agreement February, 1922, and Egypt was established as an independent government; under British protection.

ESTHONIA is formed from the northern part of the Baltic Provinces, formerly Russian, now an independent republic.

FAR EASTERN REPUBLIC, the eastern portion of Siberia; comprising all of Trans Baikal, Amur, and the Maritime Provinces. Gave up its independence November, 1922, and became a part of the Allied Soviet Republics.

FINLAND, the former Grand Duchy of Finland, including the Aland Islands, now independent from Russia, is a new republic.

FIUME, recognized as Free State according to the Italian-Yugoslavian Treaty.

FRANCE, Alsace-Lorraine restored, awarded the Saar Basin with plebiscite after 15 years. France also receives Mandate over Syria in Asia Minor, and in Africa, over parts of Kamerun and Togoland.

GALLIPOLI PENINSULA, south from the Balka-Bulair line, is in the neutral zone.

GEORGIA was proclaimed an independent republic May, 1918; in November, 1922, became a part of the Allied Soviet Republics.

GERMANY, (territory lost).

To Belgium, Eupen and Malmedy.

To Denmark, northern part of Schleswig-Holstein, by plebiscite.

To France, Alsace-Lorraine and the Saar Basin. The latter subject to plebiscite after 15 years.

To Poland, parts of East Prussia and West Prussia and parts of Posen and Silesia.

To Free City of Danzig, the City of Danzig with surrounding territory.

To Allied and Associated Powers, City of Memel with the East Prussian territory, north of the Niemen, the northern part of Schleswig to Denmark, Helgoland to be dismantled and the Kiel Canal open to traffic.

Colonies. Germany lost in Africa: Kamerun and Togoland to France and Great Britain. German South West Africa to Union of South Africa. German East Africa to Great Britain and Belgium, and in Asia, Kiau-Chau (Shantung) to Japan, December, 1922, Japan restored it to China.

Possessions in the Pacific Ocean, the islands north of the Equator; Ladrone, Caroline, Marshall, Pelew and Yap, under Japanese Mandate. South of the Equator, Pleasant (Nauru) and Solomon islands, under Mandate of Great Britain. German Samoan Islands under Mandate held by New Zealand. New Guinea, (Kaiser-Wilhelm Land) and Bismarck (New Britain) Archipelago under Mandate of Australia.

GREAT BRITAIN and her Colonies acquire from Germany: in Africa, German South West Africa, under Mandate to Union of South Africa; German East Africa, (Tanganyika Territory), British Mandate; Kamerun and Togoland divided between France and Great Britain; Palestine is under British Mandate; Iraq (formerly Mesopotamia) was proclaimed a kingdom in August, 1921, under the protection of Great Britain. In the Pacific, islands south of the Equator, Pleasant (Nauru) and Solomon under British Mandate; German Samoan Islands under Mandate of New Zealand; New Guinea, (Kaiser-Wilhelm Land) and Bismarck (New Britain) Archipelago under Mandate of Australia.

GREECE. The south part of Bulgaria (western part of Thrace) goes to Greece.

HEJAZ Asia; on the northeast coast of the Red Sea has been recognized as an independent kingdom.

HELGOLAND, all fortifications to be destroyed.

HUNGARY was proclaimed an independent republic Nov. 16, 1918.

IRAQ (formerly Mesopotamia) was proclaimed a kingdom in August, 1921, under the protection of Great Britain.

ISTRIA restored to Italy.

ITALY receives the south part of Tyrol (Trentino), Gorizia, Istria, and Zara in Dalmatia from Austria-Hungary. The secret treaty of London gives to Italy a claim to the islands on the east coast of the Adriatic. In Asia Minor Italy receives Mandate over Rhodes Island.

KIAU-CHAU, China, Germany cedes all rights to Japan. December, 1922, Japan restores to China.

KIEL CANAL open to all nations for War and Merchant Ships.

LADRONE ISLANDS, under Japan Mandate.

LATVIA (formerly Russian). Established as a republic November, 1918, and recognized as such in September, 1921.

LIECHTENSTEIN (formerly a dependency of Austria) now an independent principality.

LITHUANIA, formed from the southern part of the former Baltic Provinces (formerly Russian) and from the East Prussian territory north of the Niemen with the City of Memel, and part of Suwalki from Russia. Established as a republic February, 1918, and recognized as such by Russian Treaty in July, 1920.

LUXEMBURG, new form of government without any German control.

MALMEDY to Belgium.

MARSHALL ISLANDS held by Japan under Mandate.

MEMEL (formerly German) to Allied and Associated Powers for International Control.

MESOPOTAMIA (now Iraq) independent kingdom under British protection.

MONTENEGRO, now part of the new Kingdom of Yugoslavia.

MORESNET, restored to Belgium.

MOROCCO, Germany renounces all rights.

NEW GUINEA (Kaiser Wilhelm Land), to Australia, under Mandate.

PALESTINE independent under British Mandate.

PELEW ISLANDS under Japan Mandate.

PETROGRAD, formerly St. Petersburg.

POLAND, New Republic of Poland, formed from parts of former Duchy of Poland; parts of East and West Prussia, parts of Posen and Silesia from Germany, and nearly all of Galicia from Austria-Hungary; with part of Upper Silesia subject to plebiscite.

POSEN ceded by Germany to Poland.

PRUSSIA, (East and West) parts of, voted to return to German rule by plebiscite.

RHINE ZONE (Neutral Zone), no military operations allowed.

RHODES, Turkish Island, under Mandate of Italy; plebiscite in 1934.

RUMANIA, the Kingdom of Rumania has extended over parts of Hungary, and the Bukowina and Bessarabia.

RUSSIA, The area of the former empire has been greatly reduced. Finland, Esthonia, Latvia, Poland and Lithuania have formed new Governments. Bessarabia is now a part of Rumania, and the island of Sakhalin is held by Japan. Soviet Russia, White Russia, Ukraine, Armenia, Azerbaijan, Georgia, Siberia and the late Far Eastern Republic have united under the title, "Allied Soviet Republics."

ST. PETERSBURG, name changed to Petrograd, August 31, 1914.

SAAR BASIN, French Mandate, plebiscite in 1934.

SAKHALIN ISLAND, formerly Russian, now held by Japan.

SCHLESWIG-HOLSTEIN, a part to Denmark.

SERBIA (Servia), now part of the new Kingdom of Yugoslavia.

SHANTUNG (Kio-Chow or Kiau-Chau), Germany renounces in favor of Japan all her rights, title and privileges concerning the territory of Kiaochow and the Province of Shantung. December, 1922, Japan restores to China.

SIBERIA is governed by the Allied Soviet Republics.

SILESIA, part of which is ceded by Germany to Poland, subject to plebiscite, the result of which shows eastern portion to Poland and balance reverts back to Germany.

SMYRNA, with surrounding territory, awarded to Greece from Turkey. Surrendered to Turkey September, 1922.

SOLOMON ISLANDS under Mandate of Australia.

SOUTHWEST AFRICA, a former German Colony under Mandate of the Union of South Africa.

SYRIA, independent, under Mandate of France.

TANGANYIKA TERRITORY (formerly known as German East Africa) under British and Belgian Mandates.

THRACE (Bulgarian) awarded to Greece.

TOGOLAND, Africa, divided between France and Great Britain.

TRENTINO restored to Italy.

TRIESTE restored to Italy.

TURKEY, treaty of Mudania, October, 1922, created a new neutral zone, Constantinople and the area east of the Poldima-Kalikratia line, and the Gallipoli Peninsula south of the Balka-Bulair line; the remaining territory west to the Maritza river reverts from Greece back to Turkey; in Asia a strip along the Dardanelles, the Marmora Sea and the Bosporous, also in the neutral zone; Armenia has proclaimed independence, Smyrna and surrounding territory along the Aegean coast, Greek Mandate, surrendered to Turkey September, 1922; Rhodes Island under Mandate of Italy; plebiscite in 1934; Syria independent under French Mandate; Palestine independent under British Mandate; Iraq (formerly Mesopotamia) independent kingdom under British protection; Hejaz, forming the new Kingdom of Hejaz; the remainder of Asia Minor (Anatolia) to remain under Turkish rule.

UKRAINE, proclaimed a republic November, 1917, and November, 1922, became a part of the union of Allied Soviet Republics.

YUGOSLAVIA, officially known as the Kingdom of the Serbs, Croats and Slovenes, and consists of the southern part of former Austria-Hungary with Serbia and Montenegro.

ZONE of the STRAITS (neutral zone), formerly Turkish, to Allied and Associated Powers for International Control.

WORLD WAR

Began—July 28, 1914
Armistice Signed—November 11, 1918
Duration—4 years, 3 Months, 15 days
United States Entered—April 6, 1917
Nations Involved—28

Surrender Dates:

Bulgaria to France and allies, Sept. 30, 1918
Turkey to Britain and allies Oct. 30, 1918
Austria-Hungary to allies and U. S., Nov. 2, 1918.
Germany to allies and U. S., Nov. 11, 1918

AN ENCYCLOPEDIA OF GEOGRAPHY.

Physical, Mathematical, Historical, Political and Commercial.

PHYSICAL GEOGRAPHY.*

Geography includes four branches that most concern man, viz.: Physical, Biological, Political and Commercial Geography. Mathematical Geography treats of the Earth as a spheroidal body, of latitude, longitude and of map-drawing; it is the fundamental branch of the science, its technique, while interesting to the few, is not of such a nature as to call for more than passing allusion here.

Physical Geography investigates the conditions prevailing on and near the surface of the Earth in the three great features of Air, Water and Land. It also includes outlines of Mineralogy, Botany and Zoology.

In his treatise on the Elements of Astronomy a brief reference is made by the present writer (see Cram's Ancient and Modern Atlas) to the probable condition of other members of our Solar System. The planet Jupiter and our Moon were named as types of two opposite conditions: the first a world still in its early formative stage not yet fitted to be the abode of life; the second a dead planet, destitute of air and water, and long since deserted by every form of life. Our Earth stands to-day between these extremes, in the prime and vigor of its existence and eminently fitted to sustain its countless myriads of organized beings.

We know, however, that the Earth's interior is still intensely hot, and that the heated material is either liquid or in a viscous state. We know, too, that the colder crust which surrounds this heated mass is still slowly contracting, sinking in some places and rising in others. Volcanoes and earthquakes reveal the existence of titanic internal forces which, though far less active than in earlier geologic periods, are still steadily at work.

The Atmosphere: Science of Meteorology.

A celestial visitant descending from the study of the remote heavenly bodies to that of our planet would first enter the gaseous envelope which surrounds it—the Air, or Atmosphere.

In its free and natural state the atmosphere comprises four constituents: dry air, vapor of water, carbon dioxide (carbonic acid gas), and floating dust.

Dry Air

Dry air constitutes the vast bulk of the atmosphere, is composed of two elementary gases: Oxygen, which forms 21 per cent. of its bulk, and Nitrogen, which makes up the remaining 79 per cent. We may say with sufficient accuracy that one-fifth of the air we breathe is Oxygen, the supporter of animal and vegetable life, sustaining the living, promoting the decay of the dead, and working ceaseless changes in the face of nature. So active an agent needs an inert and sluggish element to dilute and retard its energy, and this is furnished by Nitrogen, a gas not fitted to support life and yet not actively poisonous. Oxygen typifies the radical and progressive in nature, Nitrogen the conservative; Oxygen the steam, Nitrogen the safety-valve.

Perfectly dry air can be prepared by the chemist but never exists in the free atmosphere, though a near approach to it may be found at times over a parched desert. Varying quantities of the other two gaseous constituents are always present, viz.: vapor of water and carbonic acid gas, the two together seldom exceeding one per cent of the entire air in any given locality. The amount of water-vapor present is exceedingly variable, indeed is constantly changing from the effects of evaporation and condensation. A dense fog or a heavily falling rain renders the air more humid or damp than does any other natural condition. Both extremes, excessive dryness and excessive humidity, are attended with uncomfortable sensations.

The remaining constituent of the atmosphere, Carbon Dioxide, is also present in small and variable quantity. It is constantly supplied from three chief sources, underground caverns, fires, and animal respiration. When combustion is going on the oxygen of the air combines with the carbon of the burning material and forms carbon dioxide. When animals breathe, the oxygen of the inhaled air combines with the waste carbon of the venous blood on the air-cells of the lungs and forms the same gaseous product. Vegetables, on the other hand, inhale carbon dioxide through the pores of their leaves, retain the carbon and exhale the oxygen. Thus plants and animals mutually exchange. In a well balanced aquarium the water may not need renewing for a long time, because the fish supply the aquatic plants with carbon dioxide and receive from them oxygen in return.

Atmospheric Pressure

Air has weight, elasticity and tension. One cubic foot of dry air at sea level at the temperature of 60 degrees, Fahrenheit, weighs a trifle less than one and a quarter ounces avoirdupois. The pressure of air on all surfaces at the level of the sea averages nearly 15 pounds on a square inch, or more than 21 hundredweight on every square foot. If the Atmosphere at all heights above the earth were of the density that prevails at sea level its depth would be about 5½ miles, but as it grows rarer with elevation its depth is far greater. Some theorists place it at 50 miles, others at 200, while not a few believe that it grades off imperceptibly into a space at a height which cannot be estimated. Being a constituent part of the globe, it partakes of its rotary motion. But as it is constantly in motion under the expansive influence of the sun's heat and continually rolls above the earth in great waves, the pressure at any given point is constantly changing.

The Barometer

The instrument which records these changes is the Barometer. The mercurial barometer is still used with very little change from the simple form adopted by the inventor more than two hundred and fifty years ago.

The barometer is often used in measuring the heigths of mountains and of balloon ascensions. At a height of 3½ miles the mercury stands at 15 inches, showing that only one-half of the atmosphere lies above that altitude. Aeronauts have ascended to a height of more than five miles, but they find the air not only intensely cold but too light to support life for more than a brief period.

The earth warmed by the sun radiates heat through the air. The air therefore becomes colder as we ascend from the earth just as it does when we withdraw from a hot stove. The average fall of temperature is one degree for about 300 feet of rise. In ascending a high mountain in equatorial regions the traveler passes from tropical warmth to polar cold.

Circulation of Air

The Sun's heat is the cause of atmospheric motion and circulation. Wind is air in motion. The air, like all other fluids, presses at any given point equally in all directions, not only downward but laterally and upward. When air is heated it expands and becomes lighter than the colder air around it, which presses the warm air upward just as it buoys up a balloon. Cold air is pressed inward to take the place of the warm air thus forced upward and thus a wind is created. If a bonfire is lighted on a perfectly still day the flame rises vertically over the middle of the fire while the outside flames all tend inward toward the center. One of the most familiar illustrations of the causes that give rise to wind is seen in the case of an island in the temperate zone. During the day the land is heated more rapidly than the surrounding water, the warmer air above the land rises and the cooler air above the water is pressed in to fill its place, thus creating a sea-breeze or "on-shore" wind which may last until midnight. After that hour, the land having cooled off more rapidly than the water, the air over the water rises and a breeze is started in the opposite direction, producing a land-breeze or "off-shore" wind, which dies down soon after sunrise.

Constant Winds

On a much larger scale but from similar causes are produced the winds in tropical regions known as the trade winds which blow with but little variation the year round. The sun's heat is greatest in equatorial regions because there its rays fall almost vertically. The warm air is constantly rising and cooler air from both north and south of the equator flows in. But the surface of the earth at the equator moves with greater velocity than elsewhere, and the air flowing toward that line, not having gained its velocity, is carried back in the direction opposite to that in which the earth is moving. As the surface of the earth in its rotation moves toward the east the air is carried back toward the west; but as a wind is always named according to the point of the compass from which it blows, the winds referred to are known as the easterly Trades. Those coming from the Tropic of Cancer flow from the north-east and those from Capricorn come from the south-east.

The belt of Trade Winds coincides pretty nearly with the Torrid Zone, varying somewhat northward or southward with the changes of the seasons, as the sun ranges backward and forward between the tropical circles. But the question now arises, what becomes of the air thus constantly flowing upward from the equatorial belt into the higher regions of the atmosphere. An answer has been found to this question at a few localities on high mountain slopes in tropical regions. In Hawaii, for example, observers have noted the regular movement of the Trade Winds at an elevation of about 12,000 feet. But upon going to a higher point they have found the direction changed. The east wind has now become an equally steady west wind. The same conditions have been observed at a few other points. Thus there is reason to believe that the air flowing upward when it rises to a certain altitude takes a westerly direction and descending to the earth in the Temperate Zone forms the prevailing westerly winds, formerly called the Return Trades.

---

*Much of the material here following was prepared for this work by the late Prof. Charles E. Aaron, A. M., of Philadelphia, from whose manuscript notes all of the first two chapters have been written.

Regions of Calms

In certain narrow belts where the air takes a vertical direction, either upward or downward, are found regions of Calms where for a large portion of the year no steady winds blow. One of these is known as the belt of Equatorial Calms. Here, over a space of about 250 miles in breadth the heated air rises and the winds from the north and south do not reach it. In such a belt steamers ask no favors from the winds, but sailing vessels are often delayed for many days. Again, near the tropical circles, where the return trades descend to the surface to form the prevailing Westerlies, are found other narrow calm zones called the Calms of Cancer and Capricorn. Many years ago vessels carrying horses from United States ports to Cuba and Jamaica were delayed in the Calms of Cancer, and provender becoming scarce, the seamen were compelled to throw overboard many of these animals to save the lives of the rest. Hence the belt received the name, "Horse Latitudes." A region of almost constant calms is found in and west of the Bay of Panama, to the extent that sailing vessels are often many days getting but a few miles away from that inhospitable harbor.

Local, Variable and Seasonal Winds

If the earth were entirely covered with water or with level land, all other conditions remaining as at present, the winds would be regular and constant. There would be zones of constant low pressure within the polar circles and between the tropics, and intermediate belts of high pressure over the Temperate Zones. But as it is, the varying radiation, the unequal distribution of water and land, and the presence of mountain chains greatly modify these uniform conditions and give rise to local and variable winds.

The enormous deserts of Central Asia and of Northern Africa, by far the largest of their class in the world, intensely heated and parched as they are, bearing little or no vegetation to shield the ground from the fierce rays of the sun, give rise to an upward movement of hot air whose influence is felt many hundreds of miles away. Strong currents of air set in toward the deserts from every direction. This condition prevails at the season when the sun is north of the equator. In the winter, on the contrary, especially in the Asiatic deserts, the bare land becomes chilled while the distant seas are warmer and the winds blow outward from the deserts.

Around the Desert of Sahara local winds blow, some of which, like the Simoon and the Sirocco, are the fiercest and most destructive hot winds known anywhere. Similar conditions prevail near the Great American Desert, especially when the warm Chinook winds blow from it. The Northers of Texas and Florida, felt also to some extent in Cuba, are seasonal cold winds blowing from the North, greatly to the discomfort of the thin-blooded inhabitants of those sunny regions.

Monsoons.

This term, derived from a Malay word meaning *season,* is especially applied to winds which blow along a coast or a great river valley in a certain direction for one-half of the year and in the opposite direction for the remaining half. The most remarkable of these seasonal winds prevail on the coast of Hindostan. There are similar but far less powerful monsoons on the coast of our Gulf States and in Mexico, aided in a measure by the Trade Winds. Similar causes account for the seasonal winds which blow up and down the lower Mississippi Valley.

Humidity

Water is always present in varying quantities in the atmosphere and is constantly being evaporated or condensed as the conditions of temperature change. Warm air is capable of holding a comparatively large quantity of invisible vapor; cold air very little. The temperature at which any given quantity of air is *saturated,* or charged with all the moisture that it can hold, is called its dew-point. Air at its dew-point may be compared to a sponge filled with water, which when compressed parts with some of the water it contained. When we exhale the air from our lungs on a very cold day the warm breath, charged with moisture, is at once cooled below its dew-point and a little fog is formed. The tiny drops of which this is composed sometimes gather on the beard and are frozen into ice. On a warm day this vapor remains invisible.

Dew

A pitcher containing ice-water on a warm day becomes thickly coated with fine drops of moisture forming a dew. The surrounding warm air charged with vapor coming in contact with the cold surface of the pitcher is chilled below its dew-point and a part of its vapor is condensed into water and deposited as dew. Various conditions favor or prevent the deposition of dew. When the air is well charged with vapor, the sky at the same time clear and a gentle breeze blowing, dew is abundant. On the contrary, if the air is comparatively dry, if the sky is overcast with clouds, or if a strong wind is blowing there is usually no dew. When summer gives place to autumn and the earth is chilled at night below the freezing point, the dew is frozen and takes the form of frost.

Fog and Cloud

These two terms are practically equivalent. A fog is a cloud resting on the earth; a cloud is a fog floating in the upper regions of the air. When a mass of air charged with vapor is mingled with another stratum at a much lower temperature, the former is chilled below its dew-point and a portion of its vapor is condensed as a cloud. Fogs often lie along water courses and valleys while the hill tops project above them like islands in a lake of fog. This phenomenon is familiar at sunrise.

Towns and cities where much bituminous coal is burned are visited with heavy fogs. Those which hang over London are noted for their density and long duration; Chicago, and especially Pittsburg, are also cases in point. Forest fires often cause a haziness in the atmosphere over a wide extent of country, improperly called a "dry fog." Similar conditions are caused by volcanic eruptions. Many readers will remember the brilliant and world-wide sunsets of great splendor due to the volcanic dusts from Krakatoa and later from Mont Pelee.

Forms of Clouds

Just 100 years ago Howard proposed for the various forms of cloud the names that are still in use. These are four in number, namely: Stratus, Cumulus, Cirrus and Nimbus, beside intermediate forms. The stratus clouds are the lowest in position and are formed in still air. Cumulus clouds are the most pleasing in appearance and are a favorite subject of the artist's brush.

The highest of all clouds above the earth are the forms of Cirrus. In some instances their height has been estimated at ten miles, and in the intense cold of that altitude they must be entirely composed of fine crystals of ice. They are white and feathery in appearance, sometimes forming the "mackerel sky" which betokens fine weather, and sometimes in long streamers or in radiated lines from north to south as if influenced by electrical attraction.

Lastly, Nimbus clouds are those seen in a gathering storm ready to pour down rain. The small floating drops in nearly all forms of cloud gather into larger ones. In other clouds they are often turned back into vapor before they fall, but in the Nimbus they quickly become large and heavy. All other forms of cloud may be speedily changed into the Nimbus under favoring conditions.

Rainfall and its Variability

The amount of rain varies wonderfully in different latitudes and even in contiguous regions of the same latitude. In tropical countries the amount falling on the earth is usually enormous. Few extensive regions are characterized by as heavy rainfall as the Valley of the Amazon in South America and that of the Kongo in Equatorial Africa.

Yet even within or near the tropics the rainfall varies greatly. On the north side of the Himalaya mountains, for example, the precipitation is not ten inches in the course of a year, while on their south side it has been known to reach 50 feet. Similar contrasts prevail on the eastern and western slopes of the Andes. So great is the contrast there that rainless regions exist in certain tracts immediately west of that mountain range. The influence of such mountain walls is to condense on their windward slope the abundant moisture, leaving little or none on the leaward side. The entire absence of rain in certain desert tracts is accounted for by the fact that the air blowing from the ocean is warmed instead of cooled when it reaches the parched desert and for that reason cannot part with its moisture.

In the United States east of the Rocky Mountains rain is distributed with considerable uniformity. West of the Rockies the rainfall is irregular and unequal. On the coast of Southern California the fall averages less than one foot, while at the mouth of the Columbia River it exceeds seven feet.

Rains occasionally fall from apparently cloudless skies. The few drops formed at such times do not obscure the light and the rain lasts but a brief period. In certain regions, notably in the Great Basin west of the Rocky Mountains *cloud bursts* occur with a great deluge of water for a few minutes followed by a dry spell.

Snow

When the droplets of a cloud are formed at a temperature below 32° they are frozen as they form and snow falls. Snow-flakes are usually irregular aggregations of such crystalline forms. The level above which all precipitation of moisture is in the solid state is known as the *snow-line.* In equatorial regions the snow-line is a little more than three miles above the level of the sea. In polar countries it comes down to that level. When snow falls through a stratum of warm air it is melted and is often deposited in the form of sleet, freezing again as it covers the cold ground.

Hail

Roughly stated, hail is frozen rain, while snow is frozen cloud. When large drops of rain falling from a high cloud are whirled through a deep stratum of very cold air they are turned into solid balls of clear ice and sometimes reach the ground in that form. But the more common form of hail-stone is made up of alternate layers of ice and snow. It is supposed that the solid balls of ice first formed afterward pass in their downward course through a warmer stratum which melts their surface, and they collect snow lower down. Some of this melts and is later converted into clear ice. No better theory has yet been proposed, but the subject still remains one of nature's mysteries.

Hail storms are usually of narrow extent and of brief duration, but there are occasional exceptions. In July, 1788, a hail-storm passing over Holland and France lasted 9 hours and destroyed over $5,000,000 of property.

Electrical Phenomena of the Atmosphere.

Electricity resides on the surfaces of all bodies. When a surface is charged with more than its normal amount of electricity it is said to be positively electrified; if less, negatively. Unlike states attract each other, like kinds repel. As soon as the equilibrium is restored the effects cease.

Lightning and Thunder

If two clouds, one positively, the other negatively electrified, come within a certain distance of each other a current of electricity darts from one to the other through the intervening air and a flash of lightning is the result. In like manner if a cloud floating above the earth is positively electrified and the earth negatively, or if the reverse, as soon as the cloud is near enough lightning is said to strike a point on the earth, usually a tall tree, a building, sometimes a sheet of water. The electric fluid, so called, passes along certain surfaces much more readily than others, and the former are said to be good conductors. Non-conductors resist the passage of the fluid. Metals are the best conductors and others somewhat less efficient are water, living trees and the bodies of animals. The air is a non-conductor, and when the electric current forces its way through it, its passage is attended with intense light and heat. Thunder is caused by sudden disturbance of the air producing violent waves of sound. Lightning darting through the atmosphere was formerly supposed to take a zig-zag course with many sharp angles, but an instantaneous photograph of the phenomena shows this to be due to an optical delusion.

Sheet lightning so often seen playing about cumulus clouds near the horizon is seldom attended by a blinding flash or by a sharp crash of thunder. The electric flow seems to be diffused through the moist air in a broad glow of more subdued light.

The Aurora Borealis

Other manifestations of atmospheric electricity are the Aurora Borealis, or Australis, and Saint Elmo's Fire. The former, though far from being well explained, is now generally believed to be due to the passage of a broad stream of electricity through the rarified atmosphere at great heights.

This phenomenon is never witnessed in tropical regions and seldom nearer the equator than the 40th parallel. Its most brilliant displays are seen not far north of the Arctic Circle, and exceed in splendor those seen in the southern circumpolar regions. Magnetic earth currents often accompany the displays, causing active deflections of the needle.

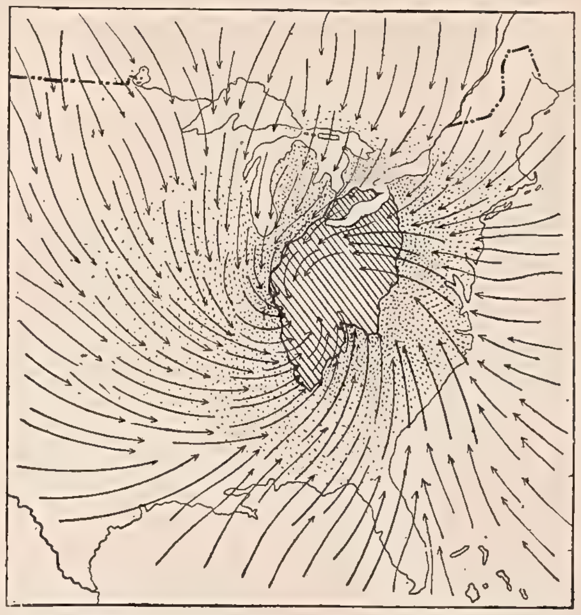
St. Elmo's Fire is a much rarer manifestation of electrical energy. When a frictional electrical machine is operated in a dark room, points on the prime conductor are seen to be tipped with a brush of pale blue-white light. In like manner, when conditions are favorable, the pointed parts of a ship's rigging, such as the ends of spars, sometimes give off feeble brushes of light visible only in darkness. A similar appearance is occasionally observed on land. Scientists have not agreed whether to attribute the "ignis fatuus," "Will o' the Wisp," or "Jack o' Lantern," to electricity or to phosphorescence.

Terrestrial Magnetism

One of the most interesting and important manifestations of electric force is seen in magnetism. The theory is gaining acceptance that the earth itself is a great magnet having currents of electricity constantly flowing around it nearly at right angles to the direction of its axis. A magnetized bar of steel is believed to have similar currents flowing around it at right angles to its length. As electric currents brought near each other always tend to become parallel, it follows that the bar, if free to move, will take a north and south direction. If such a bar is laid on a block of wood floating in water or suspended on a pivot, it always takes this direction.

The Magnetic Poles

The north pole of one magnetic bar always attracts the south pole of another and repels its north pole. The direction of the magnetic needle is seldom a true meridian line because the magnetic poles of the earth do not coincide with the true geographical poles. In fact, during the constant but slow changes of the magnetic poles they may be hundreds of miles removed from the true poles.



A STORM: AN AREA OF LOW BAROMETER.
The shaded area is that of rain; the dotted, of cloudiness; the arrows indicate wind direction.

The present position of the north magnetic pole is west of Boothia Land, near the 70th parallel of latitude and therefore nearly 1,400 miles from the true north pole.

When a place happens to be on the same meridian with the north magnetic pole the needle points toward the true north pole, and is said to be on the line of no variation. It follows that at most places the variation is considerable and is greatest at far northern localities. Another effect produced upon the needle by the position of the magnetic pole is to cause it to *dip;* in other words, the north end of the needle is inclined downward. At the equator the needle stands level. As it is carried toward the north magnetic pole it dips more and more until the ship stands exactly over the pole and then the needle takes a vertical direction. As the vessel passes northward the needle reverses its direction. At all places due east of the pole the needle points east and west.

In addition to these slow variations irregular ones are observed from hour to hour, and at times the needle trembles constantly. These rapid changes are believed to indicate the presence of magnetic storms, as they have been called, and to be coincident with the formation of large spots on the sun. The most useful applications of magnetism to the service of man are seen in the mariner's and the surveyor's compass, both so familiar to our readers as to call for no special description. From what has been said it is evident that these instruments are of little use in polar latitudes.

Climate: Isothermal Lines and Zones.

Climate has been well defined as that state of the atmosphere in regard to heat and moisture which prevails in a given region.

Isothermal lines are lines along which the average temperature is equal; and isothermal zones are bounded by these lines. If the earth were covered with a uniform level surface of either land or water, these lines would coincide with the parallels of latitude. But the unequal distribution of these features and their irregularities of level cause the isothermal lines to vary widely from parallels. As they approach certain regions they diverge rapidly northward or southward as conditions may control. These deviations are much more marked in the Northern Hemisphere than in the Southern, for reasons already referred to. Variations of altitude and nearness to the sea have a marked effect upon their direction. They vary also with the seasons.

Climate often varies greatly in places not far apart. For example, on the seacoast of Italy the average temperature is warm and moist; on the highlands of Switzerland it is cool and dry. Water has a more uniform temperature than land. The former gathers heat more slowly and retains it longer. Again, climate is nearly uniform in certain localities and very variable in others. Two places may have the same average annual temperature, yet one, being near the ocean, may vary only ten degrees the year round, while the other, far from the coast, may vary as much as 50 degrees in average summer and winter temperature, and far more in exceptional cases.

The thermal equator is the isotherm of highest average thermometer encircling the earth and varying not far from 83 degrees. Yet it does not mark the hottest average temperature on the earth. Certain desert regions in North America, Northern Africa and Southern Asia exceed this average by a few degrees. The widest actual range of the thermometer on the globe is believed to be at a town in Siberia, where the highest limit in summer is 90 degrees above zero, and the lowest in winter has reached 90 degrees below. This illustrates the capacity of human beings to endure extremes

In the temperate zones, especially in a continental climate, the inclination of the earth's axis causes a succession of four seasons. Even in those zones, however, the nearness of the sea on a western slope, may give rise to seasons which depend more upon the distribution of rain than upon variation of temperature. Thus in Western California the seasons are properly, only two in number, the rainy and the dry, while on the Atlantic Slope and in the Mississippi Valley the four seasons are distinctly marked.

Deserts

The air that flows in toward these arid regions is too much expanded by the prevailing heat to part with any of its moisture. Other such regions again have all humid winds cut off by mountain ranges. Thus, the combined effect of lack of rain and of the prevailing wastes of sand and rock makes these regions the least inhabitable of any on the face of the earth. In them, too, the thermometer marks a higher limit than elsewhere. But the popular notion that the air of all deserts is unfit to breathe and even deadly in its effects is erroneous. The dryness of the air creates discomfort, beyond doubt; but it is remarkably free from disease, while tetanus (lockjaw), tuberculosis, and the blood poisoning of wounds are almost unheard of.

Storms, Cyclones and Tornadoes.

We come now to speak of those exceptional and violent storms which are confined to certain regions and localities and are seldom or never known outside of those limits. Those of most frequent occurrence are the tropical cyclones of the West Indies, and the winter tornadoes of the Mississippi Valley and Westward. The cyclone tracks of the West Indies are always circular, and the center of the whirling wind moves onward in a curved track over an immense extent of land and water. This general track is westward when moving from near the equator toward the tropic of Cancer, then turns at that line and advances into the North Temperate Zone in a general easterly direction. Cyclones beginning south of the Equator take a similar but opposite course. The whirling wind itself, south of the Equator, moves in the direction of the hands of a clock; in the Northern Hemisphere, in the opposite direction. These cyclonic storms are called *hurricanes* in the West Indies and *typhoons* in the seas southeast of China. The wind sweeps around with terrific violence in a circle seldom much above 1,000 miles in diameter, but the general track of the cyclone may be 4,000 miles long, not ending in some cases until it reaches the 50th or even the 60th parallel of latitude.

Such are the well-known facts of a cyclone originating in the West Indian waters. There can be no doubt that the initial cause of such a convulsion is seen in the dead calm that precedes it, while the overheated air is rising, first slowly, then more rapidly, from the surface of the sea. This hot air heavily charged with vapor is chilled as it expands, clouds are formed and heavy rain falls. This condensation sets free its latent heat and as the vast volume of heated air is borne upward, the cooler air from many miles around is pressed in to supply its place. The stronger Northeast Trade Wind overcomes the weaker currents moving to meet it, and thus a whirl is caused in the direction described. The same trade wind bears the whirl along toward the west, and when it passes the tropic of Cancer the prevailing westerlies take it up and gradually change its direction toward the northeast.

In the whirl itself, the strongest wind is nearest the center, and in this center the barometer stands lowest. Often in its course the cyclone sweeps over an island and works fearful damage, taking all before it in its track, as seen in the dread fate of Porto Rico in the summer of 1900.

The Tornadoes and Whirlwinds of the North Temperate Zone differ so widely in extent and character from tropical cyclones that one cannot possibly be mistaken for the other. In a general way it may be said that tornadoes and whirlwinds originate in a vertical disturbance of the atmospheric equilibrium, while cyclones result from a horizontal disturbance. The central portions of the United States, a region so greatly favored with regard to climate, are nevertheless subject to occasional convulsions of nature in the form of very violent and destructive winds, taking a cyclonic form. Since the beginning of the 19th century facts regarding these tornadoes have been carefully collected. They are known to reach a velocity never recorded of tropical cyclones. In one instance the heavy spire of a church was carried bodily through the air a distance of fifteen miles; in another, large houses were lifted entire from their foundations and carried several rods, and heavy locomotives were blown from the tracks. The velocity of these cyclonic winds in extreme cases has been estimated at not far from two miles a minute.

A funnel-shaped cloud is often observed as a tornado approaches, a mile or two away, descending from a great mass of whirling clouds.

The theories that attempt to account for the origin of tornadoes are so conflicting and unsatisfactory that they need not be elaborated here. Electricity is a favorite cause with those who are ready to attribute so much power to that mysterious agent. The most destructive part of these storm-whirls are seldom more than a few rods wide, and the entire path from the point where they descend to the earth to the place where they are lifted into the upper air seldom exceeds forty miles in length. When such a devastating whirl plows through a forest, heavy trees are torn up by their roots, twisted into shapeless masses, or broken off like clay pipestems. A winter storm of such high wind, accompanied by a profuse fall of whirling snow and a low temperature, is widely known as a blizzard.

Cold and Warm Waves

While the great aerial ocean that surrounds the earth is moving above it in huge waves, one of these coming from the north may lower the temperature of a place very rapidly. In extreme cases there has been a fall of 50 degrees in less than five hours. On the contrary, a warm wave may bring extreme change in the opposite way, and with its attendant train of sunstrokes and hot, sleepless nights, may work greater injury than the cold wave.

The Weather and Its Forecasting.

The researches and observations which have led to the useful study of forecasting the weather are of very recent origin; may, in fact, yet be admitted to be in their infancy. The United States Weather Bureau employs observers numbering more than six hundred, in all parts of the country, with special observers in the West Indies. Their observations made twice each day at the same hour, are of use, when properly compiled, compared, and digested by the bureau and the local forecasters, to the farmers throughout the land, and of still greater service to sea-going vessels. For the latter, the government publishes a Monthly Pilot Chart for the North Atlantic, which shows not only storm tracks but the presence of obstacles in the path of ships. For agricultural and general land service, weather forecasts are published in the morning and evening papers, signal flags are displayed on public buildings, forecast cards are sent for the bulletin board of every post office, and all rural delivery carriers are supposed to be supplied with such information in the same way. In the signal flag service a square blue flag gives warning of rain or snow; a square white one forecasts clear weather. If a triangular blue flag is placed above a square flag, it denotes warmer weather; if below, colder. If a very cold wave is expected, the "black flag" is raised, consisting of a black square on a white ground. To insure the correctness of these signals, daily observations are made on all steamers crossing the Atlantic Ocean.

The study of the weather has thus been reduced to a science, but it is still in a very imperfect state and errors in the forecasts are numerous. The mistakes in forecasts then made are so frequent that a good natured public is ready to meet them daily with a standing joke. An extreme instance of this failure to read the "signs in the winds" was illustrated at Washington, D. C., during the month of February, 1903. There, at the National Zoological Park, not two miles away from the home of the Weather Bureau and its chief forecasters, the weather only corresponded with the predictions of the Bureau five days during the twenty-eight days of the month.

But what shall be said of the predictions of certain self-styled weather prophets, who pretend to foretell changes of weather many weeks and even months beforehand, usually claiming to base their predictions on the aspects of the planets! Such imposters are only to be classed with fortune-tellers and clairvoyants who still infest every large city.

THE HYDROSPHERE: THE WATER ENVELOPE.

The entire earth below the atmosphere is covered by the Lithosphere, or Rock Envelope, and the more depressed portions of this are submerged under a vast expanse of water forming the Hydrosphere and known in a general way as the Sea, as distinguished from the Land, which stands above the sea level. Measurements show that the greatest depth of the sea is about equal to the greatest height of land—namely, about five and one-half miles—showing a difference of eleven miles between the two extremes. In other words, the summit of Mt. Everest, in the Himalayas, is more than eleven miles above the deepest depression of the sea bottom, found, according to the latest soundings, at a point west of the Hawaiian Islands, in the Pacific Ocean.

The Oceans and Seas.

The Greatest Ocean Depths

Near the point just mentioned a sounding of 31,200 feet (almost six miles) was recently reported by the cable ship Nero, engaged in submarine cable work for a trans-Pacific American cable. Depths almost equal to that just noted are known to exist near Guam and the Bonin Islands, in the Pacific, and in the Atlantic at a point remarkably near the outer islets of the Bahama group.

The Sea: Its Volume and Extent

It is true, however, that the average depth of the sea is far greater than the average height of the land. The amount of water, which covers about three-fourths of the surface of the globe, is far larger in its mass than the bulk of land which rises above the water. This total mass of land elevated above the sea is computed to amount to not far from nine and one-half millions of cubic miles, while the mass of water composing the entire Hydrosphere is estimated at about two hundred and ninety millions of cubic miles. Thus it is manifest that the latter mass is fully thirty times as great as the former.

The sea covers, as said, about three-fourths the surface of the globe, and by far the larger part of it is in the Southern Hemisphere. The center of the Water Hemisphere is a short distance east of New Zealand, while the center of the Land Hemisphere is in or near Spain. The Sea really forms one great Ocean into which the grand divisions of the land extend; but, for convenience, it has been divided into five oceans; *viz:* the Atlantic, the Pacific, the Indian, the Arctic, and the Antarctic. Of these, the Arctic is the only one that is nearly surrounded by land. All the rest open broadly into each other, and the Antarctic can only claim a separate name because it surrounds the South Pole.

The Atlantic and Pacific are each divided by the Equator into the North and South parts. Fully one-half the entire sea is included in the vast Pacific Ocean alone, while the Atlantic comprises about one-fourth, and the Indian more than one-eighth.

Atlantic Ocean

The Atlantic Ocean, though not the first in point of size, holds the most important place in the uses of civilization, because it forms the chief pathway of commerce between North America and Europe; is in fact, the great inter-civilization path of marine trade. The constant and increasing trend of Occidental civilization toward the Orient, however, points to the ultimate ascendency of the Pacific as a chief bearer of the world's commerce; a period in coming history, nevertheless, that is yet far removed from the present time.

Nearly all the mid-Atlantic islands are of volcanic origin, though the Bermuda group is probably a coral formation; it however, may be coral on a volcanic base. The greatest well authenticated depth of this ocean is reported by the Challenger expedition, to be about one hundred miles north of the island of St. Thomas, measuring more than five miles.

The Atlantic Ocean extends from near the Arctic Circle on the north to the Antarctic Circle on the south, a distance of more than 9,000 miles. Its width at the Equator is about 4,000 miles, but the distance from Ireland to Newfoundland is less than 2,000. It is estimated to cover nearly thirty-five millions of square miles. Its most important arms or branches, are the Mediterranean Sea, the Caribbean Sea, the Gulf of Mexico, and Hudson Bay.

Pacific Ocean

Magellan, in 1520, after passing through the winding strait which bears his name, was the first to sail on the Pacific and to give it its present name. Its length from Bering Strait to the Antarctic Circle is 9,000 miles. Its greatest width is 10,000 miles, as measured on the Equator, between South America and Borneo. The best authorities estimate its entire area at nearly seventy million square miles. Although the Pacific doubles the Atlantic in area, the latter has a longer coast line by 8,000 miles, on account of its numerous indentations.

On the far western shores of the Pacific, along the coasts of Siberia, China, and Indo-China, there are deeper indentations, such as the Sea of Okhotsk, the two China Seas, the Sea of Japan, and the Sea of Celebes.

The Pacific, unlike all the other oceans, abounds in groups of small islands. These give to its central tropical portion the appropriate name Polynesia, which ranks as one of the grand divisions of the globe. These islands are regarded as the peaks of mountain ranges rising from the depths of the ocean, and as they are fringed with coral reefs they are known as coral islands. Around these coral islands the bed of the ocean falls off very rapidly to a great depth, showing that the sides of these submarine mountains are mostly very steep and precipitous.

Indian Ocean

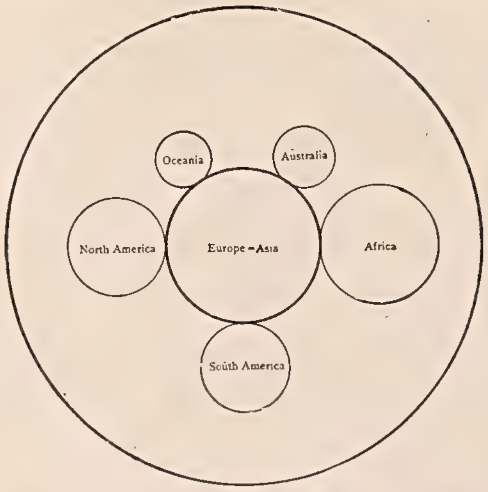
The Northern boundary of the Indian Ocean is the Southern coast line of Asia. Along this line it has on either hand Hindostan, India proper, two great gulfs, the Arabian Sea and the Bay of Bengal. It also opens through the Gulf of Aden into the Red Sea. The Western limit of the Indian Ocean is the Eastern coast of Africa and the opposite end borders on the Malaysian islands and Australia. Its Northern and Southern portions are separated by the Equator.

The greatest depth of this ocean, as sounded thus far, is about three and one-half miles, in the great bay northwest of Australia.

Arctic Ocean

This small ocean, lying around the North Pole, is more shut in by land than any other portion of the Hydrosphere. It opens into the Atlantic through broad passages east and west of Greenland, and into the Pacific through the narrow Bering Strait. Large and important rivers flow into it from the continents which border it, and its shores are deeply indented by gulfs and fringed by islands. Its shores being scarcely habitable by man interest him chiefly through the motive of curiosity which offers continual temptation to adventure. It is still believed that the North Pole is the center of a vast body of water, and for a long time Explorers were wont to speak of the "Open Polar Sea," but it becomes more certain that this ocean is filled with pack ice, which offers an almost impenetrable barrier to passage by any means yet devised.

If this vast field of ice were supported by a continent rising far above the ocean, it would form a more hopeful base on which to perform the arduous journey. As it is, the underlying water continually shifting under its burden of ice complicates the danger and uncertainties of passage.



COMPARATIVE LAND AND WATER AREAS.
The large circle represents the sum of all the oceans, the small circles, the land masses. The circle entitled Oceania represents the sum of all the oceanic islands.

Antarctica and its Ocean

The so-called Antarctic Ocean, unlike the Arctic, opens on every side into the three vast oceans which surround it. The most recent discoveries confirm the theory of the early geographers—founded wholly on conjecture—that the South Pole is entirely surrounded by a vast elevated continent, for which the title Antarctica is proposed, thus adding a sixth to the continents of the globe. On January 1, 1903, Captain Scott, of the ship Discovery and of the British Antarctic Expedition, of the Royal Geographical Society, with two other officers, penetrated to latitude 82 degrees, 17 minutes, South, or within 530 miles of the South Pole. This discoverer figures a vast Antarctic continent, having a general outline resembling that of South America.

Minor Seas

Besides its general use to include the entire Hydrosphere, the term Sea is also applied to some of its smaller arms extending into the land, such as the Mediterranean, the North, and the Caribbean Seas. The term is also rather indefinitely applied to much smaller enclosed bodies of water, which are more properly lake, such as the Black and Caspian Seas, the Sea of Azov, and the Dead Sea. The waters of some of these small inland seas stand far below the ocean level. The Caspian Sea is 80 feet below the Atlantic Ocean and the Dead Sea is 1,300 feet below the Mediterranean.

The most interesting of the larger of these minor seas are the landlocked bodies known as mediterraneans. Some of these are called gulfs, bays, or sounds, as the Gulf of Mexico, the Gulf of California, Hudson Bay, Long Island Sound, Puget Sound, and others. Smaller arms of the sea extend deeply into the land on certain shores and, when the depth near the shore is sufficient, they form numerous harbors and thus favor commerce. South America and Africa have very few of these indentations, and this lack of harbors added to their enervating tropical climate, place these grand divisions in the scale of civilization far behind Europe and North America, whose coasts abound in deep and commodious harbors.

Mediterranean Sea

The largest and most important of its class is the great Mediterranean Sea, south of Europe. This body of water, which in our day can be traversed by a swift steamer from Gibraltar to Cyprus, in four days, was to the ancient Greeks, Romans, and Phoenicians the scene of all their voyages, the theater of storms, shipwrecks and naval conflicts. Historically, it is the most interesting of all seas. Its beautiful bays and inlets, the Adriatic, the Egean, the Euxine, are famed in song and story. On its shores stood the most renowned cities of ancient times—Rome, Carthage, Athens, Troy, a few of which still stand, with Marseille, Naples, and Venice to swell the number. Its waters have witnessed the fall of nations and the rise of others to fill their places.

North of Central Europe are two other large land-locked seas, the North and the Baltic, both of the highest commercial importance to numerous powers of the first and second class which surround them, and both richly endowed with commodious harbors.

The Mexico Caribbean Sea

On the American side of the Atlantic two land-locked seas of almost equal importance open into the Atlantic, the Caribbean Sea and the Gulf of Mexico; the latter almost entirely surrounded by continuous land, the other partly by a long line of islands, the Greater and Lesser Antilles—the West Indies. Hudson Bay, though as large as either of these, is of far less importance because of its far northern location, but little south of the Arctic Circle. The Gulf of St. Lawrence is a smaller arm of the Atlantic. On both coasts of the United States are a number of Sounds, such as Albermarle, Pamlico, Long Island, Puget, etc., all of value to the world's commerce.

On the eastern shores of Asia are extensive seas, partly enclosed by islands, the most important of which are the two China Seas, the Sea of Japan, the Yellow Sea, and the Sea of Celebes. South of Asia are the Persian Gulf, the Arabian Sea, and the Bay of Bengal, already noticed. The long and narrow Red Sea has become a commercial highway, due to the traffic poured into it by the Suez Canal.

Lakes and Inland Seas.

Lakes the largest of which are less properly called seas, and the smallest, ponds, are inland bodies of water formed in various ways. They can only have a permanent existence when they occur in a depression that has a slight outlet or none at all.

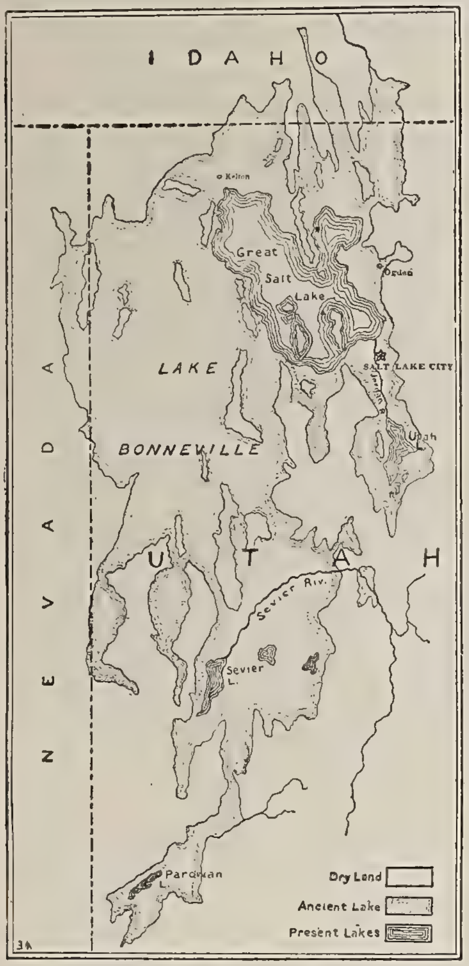
Largest Lakes

The largest lake on the globe is the Caspian Sea, with a total area of about 180,000 square miles. Eight large rivers, two of them among the greatest in Europe, discharge their waters into this great lake, yet every drop thus received, besides the rainfall on its great surface, ascends into the air by evaporation, not one drop of it having a surface outlet. Its great depth, 3,600 feet in the deepest part, the sinking of its level eighty-four feet below the Mediterranean, the presence of seals, salmon, herring, and other marine forms, and the saltness of its water, all unite to prove that the Caspian Sea was once in the bed of an ancient ocean, probably connected with the Arctic.

The Black Sea, lying less than 400 miles west of the Caspian, is not much smaller, being about equal in length, and having an area of over 172,000 square miles. Unlike its great neighbor it has an outflow into the Mediterranean Sea.

The Great American Lakes

Of the fresh water lakes of the globe, by far the most interesting and important are the Great Lakes along the northern United States border, five in number, connected with many smaller ones, all having their outlet into the Atlantic Ocean through the St. Lawrence river. Lake Superior, the largest of these, and the largest fresh water lake on the globe, is the farthest from the ocean and, therefore, has the highest surface level, 635 feet, above the sea. It has an area of 32,000 square miles, and receives the waters of over 200 rivers. Its greatest depth is a little over 1,000 feet, and its waters are wonderfully clear.



ANCIENT LAKE BONNEVILLE.

The dotted margins are those of the ancient lake; the heavier lines show the extent of its present remnants.

Lakes Michigan and Huron are about equal in area, each having about 22,000 square miles. Michigan is 160 feet deeper than Huron and both are at the same level, only a trifle below that of Superior.

In flowing from Lake Erie to Lake Ontario the water takes a due north course through the Niagara river, and passes over the great Niagara Falls. So great is the change of level in the course of this river that the surface level of Lake Ontario is nearly 350 feet below that of Erie. In area it is the smallest of the five, having a surface of 6,700 square miles.

Lakes of Africa

Next in size to the Great Lakes of the St. Lawrence Basin, are the great freshwater lakes of equatorial Africa, which lie at the headwaters of the Nile and Kongo rivers. The largest of them are Victoria Nyanza and Lakes Tanganyika and Nyassa. The northern United States, British America, Europe, and northern Asia have many lakes, but South America and Australia have very few. The deepest freshwater lake in the world, as far as now known, is Lake Baikal in Siberia, with a depth of more than two miles.

LAKE	Length in Miles.	Greatest Breadth in Miles.	Greatest Depth in Feet.	Approximate Areas in Square Miles.	Height in Feet, as to Sea Level.* Surface.	Bottom.	Bottom Temperature Fahrenheit.

SIZE, DEPTH, ELEVATION AND TEMPERATURE OF LAKES.

The Dimensions here given for African and Asian Lakes are subject to the revision of better surveys.

Cause of Salt Lakes

Most lakes contain fresh water. Salt lakes seldom have an outlet, and as they are fed by streams which flow through land and among rocks that contain saline matter, the vapor rising from the surface of the lake leaves the salt behind, and thus the water of the lake is much more salt than that of its tributary streams. The water of some salt lakes, such as the Caspian and Black seas, contains a much smaller proportion of salt than that of the ocean, because they are fed by many freshwater rivers. Others, notably the Dead Sea of Palestine and the Great Salt Lake of Utah, are so strongly impregnated with saline substances that their waters are remarkably dense and bouyant. The Dead Sea deserves especial notice. Its surface, being 1,300 feet below that of the Mediterranean, and its depth of 1,300 feet make its bottom about one-half mile below sea level. The intense heat of the sun in its deep valley evaporates its waters so rapidly that it contains nearly ten times the proportion of salt found in common sea-water, and it has deposited along its southern shore a ridge of salt 500 feet high, half a mile wide, and 6 miles long. Its water has remarkable bouyant power; it is very difficult for a swimmer to sink beneath its surface. The Great Salt Lake of Utah also contains water strongly charged with the salt, although some species of fish can exist in it, which can not be said of the Dead Sea. Oysters can not live in either of these lakes.

Lakes are often gradually filled up by the sediment carried into them by their tributary streams. The rich wheat lands along the valley of the Red river, in North Dakota and Manitoba, are the redeemed bed of an old lake, as is clearly shown by the traces of former beach marks around its margin.

The World's River Systems.

The great circuit of evaporation and condensation constantly going on carries the water of the ocean by the force of winds back to the air over the land, where it descends in the form of rain and snow. A part of this precipitated moisture washes directly into water courses and another part of it supplies underground reservoirs, from which it issues in the form of springs and gives rise to rills, brooks, creeks, and rivers, and finally returns to the great ocean whence it originated.

River Divides

The whole collection of tributary streams forms the river system, and the region drained by this system is the valley or basin of the river; the latter is often, and correctly called the *water shed* of the system. The sources of two or more great rivers may be very near each other, only separated by a *divide* or ridge of higher land, down whose opposite sides the tributary streams take their course. In some places the divide is a high mountain. Thus on Whiteside mountain, in southwestern North Carolina, are two small springs within a stones throw of each other: From one of these flows a tiny rill which unites with hundreds of others to form the headwaters of the Savannah river, flowing southeast into the Atlantic Ocean. The water from the other spring, contributing to a similar network of streams, finds its way into the Tennessee river, flowing northeasterly into the Ohio, the Mississippi, and finally into the Gulf of Mexico.

Bends and Cut-Offs.

A river flowing through a nearly level region, as in the case of the lower Mississippi, often forms great loops and horseshoe bends. In times of very high water the river sometimes forsakes its old winding course and cuts a shorter one, leaving the loop in the form of a curved moat, or "oxbow lake," as it is locally called. Such an abandoned channel was formed at Palmyra Bend, near Vicksburg, Miss. The river, which had previously been making a wide circuit of twenty-two miles, was obstructed in such a way as to force its current against the narrow neck, which was gradually cut through. When, at last, the distance of only half a mile across the neck was worn through, the whole body of the river rushed through the cut, and Palmyra Bend became an oxbow lake. Steamboats soon passed through where not long before the plow had been at work.

Greatest River Systems

The two greatest river systems of the world are those of the Amazons and the Mississippi. In the eye of the physical geographer the former takes the higher rank because, though not quite so long, it carries a greater volume of water to the sea. The commercial geographer, however, claims precedence for the Mississippi because, flowing centrally through the territory of the world's greatest republic, it far outranks the other in commercial importance.

Amazons System

The Amazons has a length, including its windings, of nearly 4,000 miles, or only 200 miles less than the Mississippi-Missouri. Its width for hundreds of miles above its mouth is enormous, easily capable of bearing on its bosom the combined navies of the world. Along its middle course the Amazons is swollen by the annual rains and covers a wide expanse of country, making vast regions of forest navigable. Its depth, too, is remarkable—over 300 feet in many places, and over 200 feet 1,000 miles from its mouth—rendering it navigable for the largest ocean-going vessels up to a point on the northern boundary of Peru.

Mississippi-Missouri Systems

The river system manifestly destined to outrank all others in its influence upon human advancement is the Mississippi, the Father of North American waters. This mighty stream ought to bear one name from its source in the Rocky mountains of Montana to its delta on the Gulf of Mexico. (See map of the United States.) But for two-thirds of its length it is known and probably always will be known as the Missouri. After it receives the waters of the Milk river, the Yellowstone, the Little Missouri, the Dakota, the

Platte and the Kansas, it turns eastward in Missouri and is joined near St. Louis by the Mississippi proper, coming down from the lakes of Minnesota. From this point it moves southward in a broader and more majestic stream, swollen in turn by the Ohio from the east, the White, Arkansas, and Red from the west, until at last it enters the Gulf through its wide delta.

Perhaps next in importance to the Basin of the Mississippi should rank that of the St. Lawrence, with its tributary chain of freshwater lakes, the most remarkable of their class in the world.

Rivers of Europe

Europe presents in its more thickly settled portions, rivers of only moderate size, yet famous in story and song. The most important of these are among the smallest—the Thames and Avon, of England, the Rhine, the Elbe, the Rhone, and the Tiber, of the continent. The largest of the historic rivers is the Danube, whose long impassable "Iron Gates"—forbidding rocky rapids—have but recently been opened to navigation, largely by American skill. Russia, the most remote from civilization, furnishes the largest streams—the Volga, the Ural, the Don, and the Dnieper. (See map of Europe.)

Asian Rivers

Large but little known rivers of Asia flow into the Arctic ocean—the Lena, the Yenisei, and the Obi. In the densely peopled regions of China flow eastward the Yang-tse-Kiang ("Son of the sea") and the Hoang-ho (the Yellow river), while the Indus, the Ganges, the Bramaputra, and the Cambodia flow southward through regions almost equally crowded with human life. The Tigris and the Euphrates are celebrated from the remotest antiquity, while the little Jordan of Syria outranks them all in historic interest.

African Rivers

The map of Africa (q. v.) presents only three or four great river systems, watering respectively the valleys of the Nile, the Niger, the Kongo, and the Zambesi. As might be expected of a continent so recently explored and opened to the knowledge of civilized man, the Nile alone has a history of ancient record, and by reason of its great length, the absence of tributaries, its annual overflow, and its connection with the great equatorial lakes, it is one of the most interesting rivers of the globe. Almost with the regularity of clockwork the annual rise of the lower Nile commences from the first day of July and spreads over its narrow valley (see map of Egypt) north of the first cataract an almost unvarying layer of fertilizing mud brought down from its upper stream. Hundreds of miles north of Khartoum, where the Blue Nile joins the White Nile, is the first cataract, and north of this Egypt is a nearly level plain. Over this is spread the fertilizing silt brought down from the upper river. The water continues to rise until about the end of September, when it begins to subside, and during November sinks to its normal level. True indeed is the ancient saying, "Egypt is the gift of the Nile," for without the beneficent presence of this river, eastern Egypt would be as arid and unfertile as the Libyan Desert which occupies its western portion.

The valley of the Kongo, covers a vast extent of country, blessed with a salubrious climate in comparison with most tropical regions, and inhabited by a peaceful and inoffensive race, capable of progress and civilization. The Kongo river takes its rise in the lake region near the source of the Nile.

The rivers of Australia are few and unimportant, as might be inferred from the desert character of the interior of that country.

It is a noteworthy fact that the Atlantic ocean, though only one-half the size of the Pacific, receives the drainage of river systems covering an area of nearly ten million square miles, while the Pacific, including the Indian, receives that of only five million.

The Oceans: Their Nature and Movements.

The water of the ocean contains saline matter, about three and one-half pounds in one hundred pounds of water. Most of this is common salt, with a very small percentage of lime, magnesia, potassium, and iodine. In tropical seas the proportion of salines is greater than in temperate zones, owing to the more rapid evaporation. Fresh water at 60 degrees weighs sixty-two and a half pounds per cubic foot. Salt water is a little heavier. The density of sea water varies according to the depth. At thirty-three feet below the surface the pressure on a square inch is thirty pounds; at three miles it is about 7,000 pounds, a force sufficient to crush a stout bottle. Yet fishes are found able to withstand such a great pressure; it is probable that living creatures inhabit the ocean at all depths, though some of the deepest soundings have failed to bring up any signs of life. When a thermometer is sunk in the sea in tropical or temperate climates, the temperature is found to decrease rapidly until it falls to about thirty-four degrees, at which point it remains uniform. In equitorial waters the thermometer must be sunk to a depth of about two miles to find water of the temperature named. Deep soundings often bring up mud which when placed under the microscope, is found to contain great quantities of minute shells. In other soundings the mud brought up consists of volcanic dust.

Tides

Standing at the open shore at 6 o'clock, A. M., on a certain day, the water is seen to reach its highest point on the shore. It then begins to fall very gradually and every succeeding wave advances to a lower line. Nearly six and a quarter hours later—more accurately about six hours, twelve and a half minutes—the tide has fallen to its lowest ebb, and then, after remaining stationary for a few minutes, begins to advance upon the shore again, attaining its highest level at the end of a similar interval of time, thus bringing high tide at twenty-five minutes past noon, on that day. The next morning it is found that the high tide occurs about fifty minutes later than it did on the previous morning, or about ten minutes before seven. In about two weeks, or more accurately fourteen and a half days, the tide which was previously high at 6 A. M. has become low at that hour. Fourteen and a half days later still the tide is again high at 6 A. M., showing that the cycle of the great tidal wave is just twenty-nine days. Observers in their first attempts to account for the tide, noticed that twenty-nine days is the time of the moon's revolution about the earth, or, in other words, the time from one new moon to another. They were thus led to trace a connection between the tides and the moon, and to argue that the tides were caused by the attraction which that body exerts upon the water of our oceans. This connection is now fully admitted, and no physicist doubts it. It furnishes one of the most conclusive proofs of Sir Isaac Newton's theory of gravitation.

The moon, however, is not the only body that exerts an attraction upon the waters of the earth. The sun also has a similar attractive force, but although it is a far larger and heavier body, its distance from the earth is more than 360 times that of the moon, and consequently its attractive force is much less. The force of the sun being usually exerted in a different direction from that of the moon, the problem of the tides is greatly complicated.

Waves

The difference between waves and currents is that in the latter a stream of water actually advances through the surrounding water, while in a wave successive portions of water rise and fall without moving onward. If, however, a wave is driven into shallow water, the bottom of it drags on the ground, while the upper part, not being impeded, moves forward and finally combs or breaks, driving its surf up the sloping shore. Very deep waves may break at a great distance from the beach, though usually the surf is formed near the shore, thus affording the safest and most delightful form of salt water bathing. The natural cause of waves is the action of wind which drags on the surface of the water and sets it in motion. They are of all sizes, from the tiny ripples caused by a gentle breeze to the huge billows driven before a hurricane. These latter are formed in a deep open sea, and their height may reach thirty feet from crest to trough. We read accounts of much higher waves, but they are probably exaggerated, like so many other tales of the sea. When, however, the wind lulls, the waves roll higher, because the effect of the wind is to push and flatten their crests. Such rollers, as they are called, may reach a height of fully fifty feet.

The great rollers of an Atlantic storm often have a width of a hundred yards from crest to crest, and a progressive speed of thirty or even forty miles an hour. A ship must keep its head to the wind and pointed across the wave. Thus, avoiding a position of parallelism to the wave, she may ride over it in safety. The force of such a volume of water striking the sides of a ship is generally underestimated. There is reason to believe that the striking force of the heaviest storm waves reach the enormous figure of three tons on a square foot of surface. Few structures are capable of resisting such a momentum, especially when rapidly repeated. The theory that the friction of wind on the surface of water agitates it into waves is well established by the wonderful efficacy of oil to calm the troubled waters. The oil lubricates the friction of the wind somewhat as it lubricates metallic surfaces in the joints and bearings of machinery. It has a most remarkable effect to prevent the violent breaking of the waves. The best method of this oil application has been found to be by pouring sperm oil and oil of turpentine into canvas sacks which are floated to the windward of the vessel, and there held in position. The effect is almost magical; the very instant that the oil oozes through the canvas and spreads over the water the waves which but a moment before ran to a perilous height are reduced to less than half their size, and cease to break violently upon the ship. The destructive breakers now become moderate rollers over which the vessel rides in safety. During a storm of exceptional violence waves may disturb the water to a depth of 500 feet, but as a general rule the water is not affected below fifty feet. In the open sea the velocity of a wave is far greater than in shallow water. An earthquake-wave has been known to cross the Pacific from Peru to Japan in twenty-four hours, making its rate of speed nearly seven miles a minute; this is a speed far in excess of the most violent winds.

Ocean Currents

Ocean currents are streams flowing through the quiet waters of the surrounding sea; they have well been compared to rivers flowing through the land. The chief difference between waves and currents has already been noted, yet the two are alike in one respect, for currents may be traced, directly or indirectly, to the action of winds. The term drift has been applied to a current directly impelled by wind, while one which is the after-effect of a drift is known as a stream. Thus the Gulf Stream, the most important current of the Atlantic, and probably the most notable example on the globe, as well as the most thoroughly studied, owes its origin to the trade winds which drive the waters of the north tropical Atlantic in a westerly direction and form the North Equatorial Drift. Though this drift moves very slowly with a daily rate of about twelve miles, it gains in velocity as it passes along the northern coast of South America and flows through the Caribbean sea at a rate varying from forty to eighty miles per day. Thence it enters the Gulf of Mexico, flowing northward through the Yucatan channel, receives a small addition from the Gulf, and thence flows eastward through the Florida channel at an augmented rate varying from seventy-five to one hundred and twenty-five miles per day, according as it is favored or retarded by the winds.

Gulf Stream

No ocean current on the globe has been found to attain to the average velocity of the Gulf Stream, and it is equally true that none offers such a difference of temperature in comparison with that of the surrounding waters. As it leaves the Gulf, and in fact throughout its subsequent course along the coast of the United States, it is separated from that coast by a band of much colder water, sometimes called "the cold wall." Though it runs very deep, in fact reaches the bottom of the ocean until it passes Cape Hatteras, it does not spread out in width south of that cape. There it divides into three bands with an aggregate width of about 170 miles, the most western of these bands being the warmest and swiftest, with an occasional rate of one hundred miles per day. At Sandy Hook, New Jersey, at the mouth of New York bay, the current turns eastward and soon loses its rapid flow, and long before it crosses the Atlantic is merged into the general easterly drift kept up by the prevailing winds. A peculiar feature of the Gulf Stream deserving notice is the blue color of its water, readily perceived by a practiced eye in contrast with the lighter colored water through which it flows.

Equatorial Drift

When the South Equatorial Drift, flowing across the Atlantic from the coast of Africa, reaches the eastern angle of South America, on the coast of Brazil, it divides into two great branches, one flowing along the shores of Guiana and Venezuela as already described, the other turning southward and forming the Brazilian current. This slow stream after reaching the coast of Argentina turns eastwardly under the influence of the prevailing westerly winds of the South Temperate Zone and crosses to the coast of Africa. Here the Southern Connecting Current, as it is called, turns northward along the coast of Africa, and on passing Guinea mingles with the Equatorial Drift and so returns to Brazil. Branching northward from the Gulf Stream are feeble drifts known as the Labrador and the Greenland Currents. As the southernmost drift of the Gulf Stream driven by westerly winds approaches Spain, it turns southward toward the Canary isles, then westward, and joining the New England Drift, returns to the West Indies.

In the Indian ocean the South Equatorial Current circulates, and north of this along the coasts of India are the drifts caused by the monsoons. The West Australian Current, as its name implies, washes the western coast of that continent.

Japan Current

Passing now to the Pacific ocean, perhaps the most notable of its currents is the Kuro Siwo, or Japan Current, which has been called the Gulf Stream of the Pacific. It is, however, a much feebler and less heated current. Issuing from among the large Malaysian islands, it flows northeastward along the Philippines and to the east coast of Japan, where it becomes a feeble drift, then slowly crosses the Pacific. A part of it forms the California Current, and then returns to Asia mingled with the North Equatorial Drift under the impulse of the Trade winds. Into the South Pacific ocean the South Equatorial Drift forms a similar great oval between South America and the islands east of Australia. On the west coast of South America this drift forms what is known as the Peruvian Current. In the great open Southern Sea is found the West Wind Drift, and south of that the Antarctic Current.

Many students of ocean currents argue that winds are not their only cause. Lieutenant Maury, who made a specialty of their study, held that the difference in specific gravity between the saltier waters of the equatorial belt and the fresher waters of the Polar regions is competent to account for ocean currents. Most authorities consider winds a more important factor.

Glaciers, Icebergs, and Pack Ice.

Glaciers

A glacier is a mass of ice formed from snow by great pressure, somewhat as a boy squeezes a snowball into the form of ice by pressing out the air. In temperate regions the snow accumulates in mountain valleys above a certain height, as in the Himalayas, the Swiss Alps, and our northern Rockies. The mass of ice is slowly pushed down the valley, partly by its weight, partly by its expansion, and its lower end being exposed to warmer air slowly melts and becomes the source of mountain streams. The river Rhone has its source in Alpine glaciers. As a glacier creeps downward the rocks adhering to its under surface grind its rocky bed into powder, making the water that issues from it milky or muddy in appearance. In some places the glacier finds fragments of rock and pushes or rolls them along in broken masses, varying in size from pebbles to enormous boulders. Thus it builds up a wall of rock before it, known as a terminal morain, and similar walls on each side called lateral morains. Two glaciers may unite in a ravine and form a medial morain. The glacier is constantly fed above by the winter snows and melts away below in the summer warmth. Thus during part of the year the glacier advances and at the opposite season it slowly retreats.

BEE HIVE GEYSER, YELLOWSTONE PARK.
(See following page.)

Icebergs

A great ice-sheet of polar regions often reaches the coast and pushes its solid wall of ice into the sea. Here the bouyant force of the water breaks off enormous fragments which float away in the form of icebergs, and are sometimes carried on the Atlantic as far south as Newfoundland. Icebergs have been seen, which on a moderate calculation contained more than a million tons of ice above the water line. As more than eight-ninths of the entire mass is under water it is safe to estimate the total weight at not less than a billion tons. Such masses move slowly under the influence of submarine currents, but the strongest ship ever constructed, if caught between great icebergs would be crushed like an eggshell. No doubt a considerable percentage of the mysterious disappearances of Atlantic-crossing vessels may be safely attributed to the collision with icebergs which in early summer drift down into the more northern paths of ocean commerce. The Antarctic ice sheets are evidently far thicker than those of Greenland.

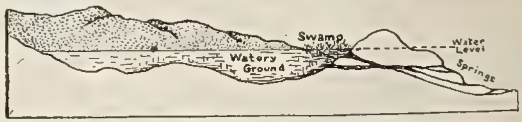
Minor Inland Waters.

Springs and Wells

Water which has soaked through the ground from rainfall is often checked in its downward course by a layer of rock or any impervious stratum, and where this rock or stratum comes to the surface a natural spring appears. Many brooks and creeks are fed by springs rising in the bed of the stream. The water of most springs is cool and refreshing, having the temperature of the earth a few feet beneath the surface. In mountain regions the temperature is often below 50 degrees, and in level districts where the earth is warmer 60 degrees is a more common mark. It is difficult to account for the volume of some springs high up near mountain tops. A spring of considerable volume flows steadily through all weathers, not far below the top of Mt. Mitchell and at an

In the Indian Ocean the South Equatorial Cur-

elevation above any land east of the Mississippi river; its reservoir, however, must be within the mountain above the spring level, small as that area seems.



THE FLOW OF PERCOLATING WATERS.

The purity of spring water depends on the nature of the rock through which it flows. What is properly known as freestone water is pure or "soft" and always wholesome. Limestone water, on the contrary, is impregnated with that mineral and is "hard," that is it does not dissolve soap freely. Springs are found here and there which have flowed through rocks impregnated with other minerals, such as magnesia, common salt, and metallic salts. Such are known as mineral springs and their waters are credited with healing properties. Others give out fumes of hydrosulphuric acid and are known as sulphur springs. Others again, supply water warmed by the internal heat of the earth and are known as hot, warm, or thermal springs.

Geysers

Geysers are found only in volcanic regions. The principal geyser regions are in Iceland, New Zealand, and the Yellowstone National Park; the last exceeding the others in the number and average power of their springs, though the spring attaining the greatest spurting height is claimed for New Zealand. All geysers are believed to rise through long underground channels or tubes connected with the hot strata below. The water in the lower part of the tube is heated far above the temperature of boiling water, but the presence of the cooler water above prevents its conversion into steam. After a certain interval the heat becomes too great to be resisted and the water below suddenly flashes into steam, which forces out the superincumbent water and the steam follows, rushing to a great height. The Giantess—the most powerful geyser in the Yellowstone Park—sends up a column of water to the height of 250 feet, and a jet of steam more than 1,000 feet. Old Faithful, the most regular and uniform of that Park, spouts every forty-five minutes and each eruption lasts about five minutes. It is believed that the geysers of the Yellowstone are gradually decreasing in energy. The mineral dissolved by geysers is silica, which is deposited on cooling and assumes many beautiful and fantastic forms.

Artesian Wells

When the supplies of underground water are at a great depth, artesian wells are dug or bored. Water always seeks its level and if an inclined layer of earth containing an excess of water and confined between strata of impervious rocks is bored into, at a point lower than the source, the water may rise to the surface and even spout far above it. An artesian well in South Dakota threw a fountain to the height of about ninety-seven feet.

Many deep wells have been successfully sunk in arid lands, along the coast of Southern California, for example. There are many also in the Desert of Sahara and some of these as well as of others flowing in countries of the Old World are known to be of very ancient origin.

Other Waters Underground

The existence of underground streams is much more common than is popularly supposed. Indeed, a French physiographer, M. Martel, in a recent lecture before the Geographical Society of Paris, takes the position that the subterranean circulation of water is being gradually substituted for surface streams.

Many rivers in addition to their surface course have an underground flow which continues to act during the hot season when the upper bed is nearly or quite dried up by evaporation. In some instances this change from a superficial to an underground stream occurs daily. The intense heat of the sun evaporates the water so rapidly that it disappears from sight, while in the night the stream percolating below rises to the surface. Some of the larger rivers in Nevada are instances of this daily change.

CLEOPATRA'S TERRACE, YELLOWSTONE PARK.
A striking illustration of deposition of silica.

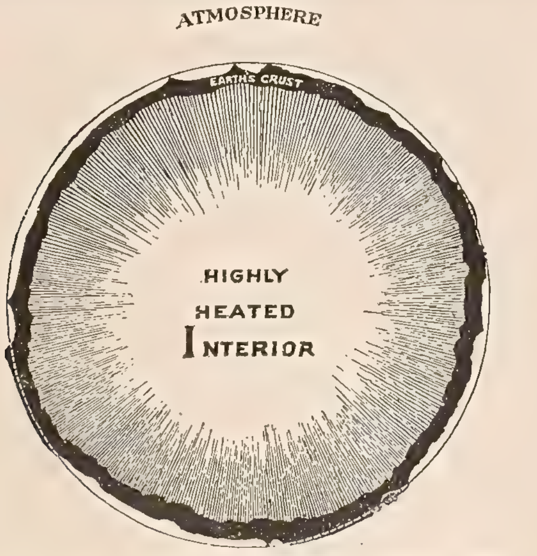
Partly because of the rapid evaporation under the tropic sun and also because of the very porous nature of the sun-baked soil of the coastal plains, many of these mountain torrents do not visibly reach the sea, except in the height of the rainy season. A stream of considerable volume breaks through the hills south of the Mona valley, in southeastern Jamaica, leaping over a series of picturesque cataracts only about two miles inland from the Caribbean Sea. Yet, during most of the time the bed of this stream, where the post-road crosses it near the shore, is entirely dry.

In regions of limestone formation, such as those of Eastern and Middle Kentucky and Tennessee and Western Virginia, rivers frequently disappear beneath the ground, into or through the caverns there common. Lost Creek, in Tennessee, is a notable case of the sort, where a stream plunges to some depth beneath the surface only to reappear many miles away. Such underground waters are the creatures of caverns, while in turn caverns are created, or at least enlarged and extended by them.

THE LITHOSPHERE, OR ROCK ENVELOPE.

The Crust of the Earth.

One now well-established fact overthrows the old theory that the heaviest part of the earth is in its Rock Envelope and that it grows lighter toward the center, which was supposed to be occupied only by fiery gases. It is now known that the specific gravity of the entire earth is about 5½, while at the surface that of rocks is about 3. Just as the water of the ocean becomes denser at great depths, the same is doubtless true of the melted matter in the interior of the earth. The great heat of the interior is proved not only by the volcanic eruptions, but by the fact that, in the deepest borings, the temperature increases at the rate of 1 degree for each 65 feet. At this rate the heat at a depth of less than forty miles would be sufficient to melt the most refractory rocks and metallic substances. Nothing beyond this is positively known; all is conjecture.



IMAGINARY SECTION THROUGH THE EARTH.

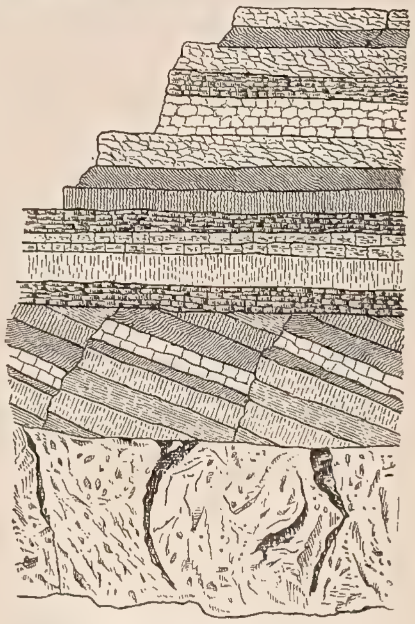
Igneous Rocks

All substances that go to form the crust of the earth are known as *rocks,* from the lightest sand to the hardest crystalline quartz. Underlying them all is ordinary granite, which is believed to be the oldest rock in existence and the source of all the substances found in other formations. Granite is supposed to have hardened directly from the original melted state of the earth's crust and is called an *igneous* rock, or one of a fiery or melted origin. Granite is chiefly composed of quartz, mica, feldspar, and hornblende, each of which contains the common ingredients of rocks, viz: silica, alumina, lime, iron, potash, soda, and smaller proportions of others. Of these ingredients the silica and alumina are the most abundant.

Rocks deposited by water in strata or layers are said to be stratified. Some of these are found in one region, some in others; no one locality shows them all or even a very large part of them. As there are no deep borings penetrating more than a very small portion of the strata, they can be studied best where they have been broken and tilted, and their edges upturned.

Land: Its Forms and Masses.

As previously stated there is a difference of more than eleven miles between the deepest known point of the ocean bottom and the culminating point of land. Yet this is so small compared with the size



UNCONFORMABLE STRATA:
CANON OF THE COLORADO.
Igneous Rock with broken and tilted strata on which recent layers are deposited.

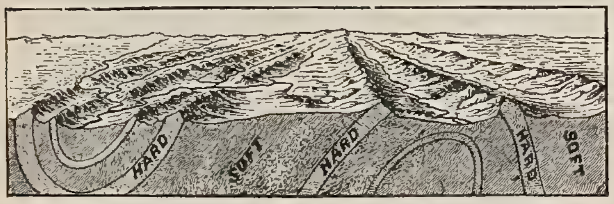
of the earth, that on a globe two feet in diameter, eleven miles would be represented by but 1-50th part of an inch, or about the thickness of an ordinary brush bristle. The amount of water forming the entire sea is in cubic volume about twenty-five times that of the land rising above it. If, then, the entire land surface were brought down to a uniform level it would be covered by water to the depth of one and one-half miles. The surface of the earth may be divided into a water and a land hemisphere. The former contains only Australia, the southern end of South America, the Antarctic Continent, and a few minor islands. The other hemisphere contains all the remaining land, as illustrated in the maps of this work.

The continents are in reality large islands. The cutting of the Suez Canal has made Africa an island and Eurasia (Europe and Asia) another. The completion of the Isthmian Canal between North and South America will divide the Western Continent into two islands. Most of the small islands of the globe are in reality the summits of submerged mountains. This is true especially of continental islands which lie near the shores of the continents and mostly in lines parallel thereto, and so placed as to be clearly continuations or spurs of continental mountain systems. The West Indian islands are excellent illustrations of a submerged mountain system.

Oceanic islands, on the contrary, lie far out in the ocean widely removed from the continents, and are mostly either of volcanic or of coral origin, or of both. Volcanic islands are mostly abrupt and mountainous, while coral formations usually rise but a few feet above the ocean. The most extensive series of volcanic islands is the great archipelago of Polynesia, which includes all the intertropical islands of the Pacific ocean lying east of Australia. These islands rest on submarine continents, as they may be called, and are probably summits of mountains rising above the sea.

Corals Islands

Nothing in nature illustrates more strikingly the great effects of a multitude of little agents than the building of immense reefs and island walls by the coral polyp. This tiny member of the animal kingdom, resembling in form a tubular flower, has its mouth surrounded by hair-like tentacles which draw into it currents of water containing limestone, from which water it gathers its supply of minute marine life for food. With the mineral matter thus taken into its system it builds its home, a tube of concreted limestone particles, which slowly thickens and has joined to it minuter tubes built up in a like manner by its progeny. Thus a mass of branching coral is gradually formed which in time becomes a great wall of limestone, covered with the flower-like polyps. When this wall reaches the surface, the action of the waves breaks up the hard coral and piles it up in a reef, or low ridge, rising a little above the sea. On this sea-birds and seeds from their excrement, or larger ones washed from other islands, take root, until the long coral reef furnishes a soil for tropical plants and trees, palms, the bread-fruit, and the wild banana being prominent among them. The coral polyp works only in clear water and at a temperature that does not fall much below 70 degrees.



APALACHIAN CANOE-VALLEYS.

Coral reefs usually start from volcanic islands, or from continental shores favorable to their formation. Thus along the southern coast of Florida barrier reefs have been built up, far enough from the main land to be dangerous to navigation. Fringing reefs are found close to coral islands, and in some places both exist, with a stretch of shallow water between them.

Mountains

Elevations of more than 2,000 feet above sea-level are usually classed as mountains, while lower ones are known as hills. Mountains which stand on high plateaus may be elevated far above sea-level and yet only moderately above their actual base. The most sudden and abrupt elevations above a low plain, or near the sea shore are usually of volcanic origin.

Mountains, for the most part have been formed by the upheaval of the earth's crust, and have usually been later much modified by erosion, as elsewhere described.

MULTNOMAH FALLS, OREGON.

Watergaps

As the mountains rose, the rivers having the right of way, cut their courses through the barrier and each finally formed a water-gap, or abrupt gorge through the mighty barriers. The well known gaps of this sort at the Delaware Watergap, between New Jersey and Pennsylvania, and on the Potomac, between Maryland and West Virginia, are prominent instances of such upheaval combated by river erosion.

The rock waste has naturally been washed down into the valleys.

The enormous ranges of the Rocky, Andean, Alpine, and Himalayan systems constitute for the most part a confused and intricate medley of ridges, ranges, and spurs, intersected by deep valleys, notches, and gaps. Isolated peaks are not very common, and being for the most part composed of harder rock, have been left standing when the softer material around them has been worn away.

Valleys

Many valleys have been cut by streams which still continue to flow through them, often greatly reduced in size from what they once were. Fertilizing material has been washed down from the mountain sides, enriching the valleys and making them most desirable locations for the homes of mankind. The great valley lying between the Sierra Nevada and the Pacific Coast Range, and extending from the Gulf of California to far north of Puget Sound is one of the garden regions of the world. Less extensive are the great valley of East Tennessee and those of the Shenandoah, Susquehanna, Delaware, and Hudson rivers, all the scenes of busy, prosperous civilization.

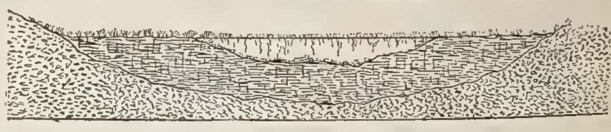
Mountain Passes

These have various local names; in the Blue ridge a deep division between mountains is usually called a *gap;* in the White Mountains of New Hampshire, a *notch;* in the Catskills of New York, a *clove;* but in most regions, especially in foreign lands where a highway of commerce passes over, the word *pass* is used. Such breaks are of great importance to travel and the tide of commerce, for without them many mountain walls would be impassible to all save the most intrepid alpine enthusiasts or explorers.

Near to, or along such passes have some of the world's greatest battles been fought; at opposite ends of them opposing nations have massed their armies for invasion, conquest, or repulsion. Always they have been the keys to the irresistable onmarch of civilization, halted perhaps for a time by the mighty barriers they alone pierce. Memory promptly recalls ancient Thermopylæ, now by natural action reduced to a swampy plain; and political geography of today calls to our mind Khyber Pass, through which the British and Russian empires now appear to be glaring at each other.

Plateaus

A plateau or table-land has been produced by uplifting of a larger area of land. More decided upheavals have taken place near them, and thus we usually find mountain ranges and peaks in their vicinity and often forming a rim around them. Thus some of the highest ranges of the earth enclose the great plateau of Tibet, well called "the roof of the world," nearly three miles high. The lofty ranges of the Sierra Nevada and Rockies border the extensive plateau of western North America. The higher plateaus are not well fitted to be the abode of man, but many lower ones furnish extensive pasture lands and vast fields of iron ore and coal. Nevertheless, Tibet is occupied, though sparsely, by a hardy people, and the plateau around Lake Titicaca, in Bolivia, affords a home for a considerable, a contented, and long lived people, although it is over 12,200 feet above the sea.



A SWAMP IN PROCESS OF FORMATION.

Canyons

A network of canyons has been formed by the corroding streams flowing through certain plateaus. The most remarkable known examples of deep canyons are found in Arizona along the course of the Colorado River, where the vertical walls of the canyon are in some places more than 6,000 feet above the bed of the river. In that region there are no valleys, properly speaking; every stream flows through the bottom of a precipitous canyon, giving to the scenery a most unique aspect.

In describing changes of temperature in the atmosphere as we rise above the sea-level, notice has

Mountain Vegetation

been taken of the changes met in ascending a high mountain in the tropics. At its base we find the products of the torrid zone. At a height of a few thousand feet are seen the vegetable growths of temperate climates. Forests usually abound on mountains which receive warm moist winds. But when we reach a certain height the cold becomes so intense that trees no longer grow, and the line at which they disappear is called *the timber line.* Above this only hardy shrubs and grasses, with mosses and lichens, are found. On the highest mountains of equatorial regions we reach the snow line, above which snow lies the year round. In the Polar regions the snow line descends to the sea. On a mountain in the torrid zone it may not be found below three or four miles. Orizaba, a mountain of the State of Vera Cruz, in Mexico, is an admirable example of these zones of vegetation, and, as a consequence, of zones of animal life of equal variation.

THE PALI.
Hawaii's Historic Peak.

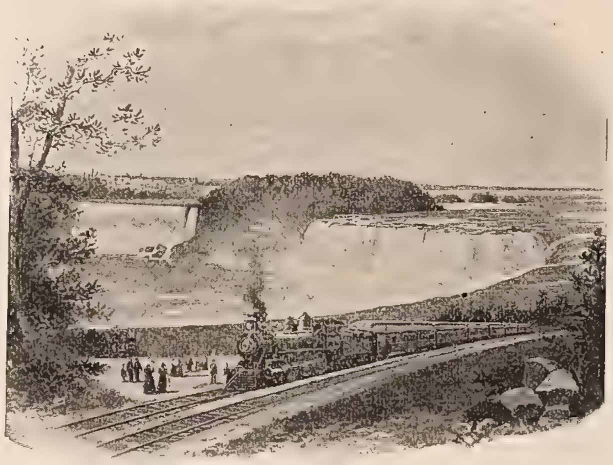
Zonal Gamut on Mountains

From Palms to Icebergs

It starts with bananas, palms, tree ferns, and all the wealth of tropical plant life at its feet. A day's walk up the lower ridges that contribute to its great mass brings one into a forest region, with a great wealth of undergrowth and tangle. Another day's climb, up steeper ridges and over forbidding divides, brings the explorer to a region that reminds him greatly of the stunted woodlands of northern Canada, and on the next day he will be glad to stop at the upper edge of the timber land and camp preparatory to the final two days ordeal of conquering bleak, windswept, rocky barriers, then mighty ridges of drifting, blinding snow, treacherously soft by day, glassy hard after dark, and a final stretch of glaciers and icy crests, up which he cuts and climbs his way, literally step by step, three and one-half miles above the sea level, where exertion, breathing, even thought, seem to be well nigh impossible. In this climb he has in four or five days had the zonal experience which would have been his had he walked northward from Vera Cruz along the gulf shores, through Texas, Louisiana, Mississippi, northern Alabama, along the Apalachian system from Georgia to New Hampshire, north through Quebec and Labrador, to the perpetual snows and glaciers of Baffin Land. And as he went, eating guavas and mangoes from the tree, at the start, at the finish a few days later, he will have noted an equal change in animal life, from the lizard, serpent, and tarantula belt of the lowlands, to the frigid zone of rockmoss and a few Arctic insects, below the final climb. Such an achievement, it is generally agreed by those few who have compassed it, is the most instructive one possible to the naturalist and explorer.

Plains

By far the most numerous human inhabitants of the earth are the dwellers on the lower plains, as seen on every continent, notably in the great plain of the Valley of the Mississippi, the broad plains of central Europe, and in the still broader expanses of India and China. Plains have various designations according to the character of the land and the vegetation which covers them. Thus, in a comparatively level country, where the rainfall is abundant, are found extensive swamps, which when reclaimed by drainage form fertile lands. At the opposite extreme, that of lack of rain, stand the great sandy and rocky deserts, with here and there, an oasis, a fertile spot around a spring of water. Of a character intermediate between swamps and deserts are the prairies of the northern Mississippi Valley, the silvas of the Amazons Valley, the llanos and pampas of South America, and the steppes and tundras of the Russian Empire.



NIAGARA FALLS FROM THE CANADIAN SIDE.

Swamps and Marshes

Swamps, bogs, and marshes are the result of imperfect drainage. Swamps also occur in prairies, river bottoms, and in deltas of rivers. A "quaking bog" or trembling swamp is caused by the want of compactness in the moss, which makes it shake or undulate under the feet. The canebrakes of the Southern States and the mangroves of Florida also start swamp lands and salt marshes. When the growth on the surface of a salt marsh finally rises above tide level, better grass takes the place of the marsh grasses and a fertile meadow is started.

The salt marshes along the shores of the Arctic Ocean in Siberia and America are called *tundras.* In the short summers of those latitudes such bogs are impassable, but through the long winters their surfaces are frozen and give a hard foundation for sleds drawn by dogs or reindeer.

Prairies

The rich *prairies* of North America, lying between the Great Plains and the forest lands of the Mississippi Valley, are of unsurpassed fertility, and have in some instances produced large crops of wheat for 25 consecutive years without fertilization. The *llanos* and *pampas* of South America are similar to our prairies, while the vast *silvas* of the Amazons Valley are covered with forests and have an area of over a million square miles, or about twice that of France and Germany combined.

Caves

Underground waters dissolve certain of the softer rocks. Caverns are, therefore, very common in limestone regions, but very rare in localities where granite, sandstone, and slate are the prevailing rocks. Sometimes the roof of the cavern breaks in, forming a deep well-like opening in the ground, and the cavern, thus exposed to the light and surface drainage, becomes a sinkhole. In other instances the roof of the cavern remains firm for a long period, and the water trickling through falls from the roof, drop by drop. A part of this water evaporates and leaves behind a tiny deposit of limestone. This gradually receives additions and forms a stalactite, hanging overhead as an icicle hangs from the eaves of a house. As a drop falls from this on the floor of the cavern a little more of the water evaporates and thus a stalagmite is slowly formed rising from the floor. If the process continues for sufficient time, the stalactite and stalagmite meet and form a column.

Mammoth Cave

The most extensive cavern, or system of caverns, yet discovered, is the Mammoth Cave of Kentucky, which extends many miles underground, and displays to the explorer hundreds of connecting galleries and chambers.

It happens occasionally that a part of the roof of a cavern has been carried away, leaving a part standing. In this way the formation of natural bridges is accounted for. Of these the famed Natural Bridge of Virginia is a well known example.

Coastal Caverns

In some lands caverns have been washed out by the action of waves along a coast, a process which by slow degrees has worn away even hard basaltic rocks. The best known of such formations is Fingal's Cave, in the island of Staffa, on the west coast of Scotland.

The rock caverns, as they are called, in regions where granite is the prevailing rock, are not true caves, but merely masses of granite thrown together in fantastic groups formed by the upheaval.

WEIRD ROCK FORMATIONS.
Monument Park, Colorado.

Waterfalls

When a river forces its way over broken edges of strata it wears away the softer strata and leaves the harder rocks. If the harder rock is at the top, the softer ones below are worn away and the water descends abruptly in a vertical fall or cataract. This is the case at Niagara Falls. But the position of the falls is receeding; *i. e.:* it is slowly moving up the Niagara river, or southward toward Lake Erie. This is because the top layer of hard limestone is also cut away by the action of the water, as the softer material more easily washes out and leaves the upper ledge hanging over without adequate support. In the last quarter of a century the falls have receded at the rate of eight feet per year, at the angle of the ledge or near Goat island; but the American cataract has scarcely fallen back at all in that time.

Niagara Falls

The descent of the rapids for a mile above the cataract is fifty-two feet, making them second in interest to the falls themselves, the greatest height of which is 164 feet. Events constantly occurring prove that the Canadian Fall is gradually changing. Only during 1899 a large section of its brink fell.

The feature which places Niagara Falls above all its rivals for grandeur and sublimity is the immense volume of its waters. The far greater height of other cataracts cannot compensate for this advantage. Its volume can, perhaps, be conceived from the fact that the American Fall is 1,000 feet wide and the Canadian Fall about twice as much, making the total width about three-fifths of a mile. The volume of water pouring over the Canadian Fall is far greater than that of the American, while the height of the latter is thirteen feet greater. The impetus given by the Rapids carries the water over the Horseshoe (Canadian) Fall with a grand curve. Between the rocky wall and the wall of water a great cavern has been formed; and back of the American Fall a similar but smaller hollow exists, known as the "Cave of the Winds." The two great divisions of the Falls are separated by Goat island, which extends to the extreme verge of the precipice and affords many points where surpassing views may be had. Below the cataract the width of the river, on its way to Lake Ontario, varies from 600 to 1,200 feet. The gorge just below the Falls is suddenly narrowed and this throws the water into violent commotion, which culminates in the Whirlpool Rapids and forms a scene of impressive grandeur.

Other Great Falls

Americans, both north and south of the St. Lawrence, may well be proud of Niagara. The cataract which stands next to it for grandeur and for volume of water is Victoria Falls, in the Zambesi River, Africa, discovered in 1855 by the great explorer Livingston. The river at the chasm is over 2,700 feet wide and the sheer fall is over 400 feet, sending up a column of spray to a height of quite 800 feet and rendering the whole region for some miles around one of almost perpetual mist. Norway, Oregon, Uruguay, the Yellowstone National Park, and especially California with its Yosemite Falls, all furnish attractions to the tourist or explorer in the line of grand and beautiful waterfalls.

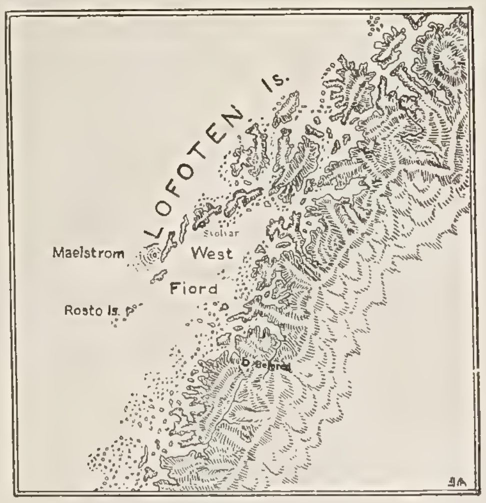
River Deltas

In the physiography of rivers, especially those which flow with a sluggish stream through a nearly level region, deltas play an important part. Such a river accumulates at its mouth deposits of silt which obstruct its free passage into the waters of the sea, gulf or bay. Through these obstructions the river forms new mouths and the great deposit of mud and sand is carried far outward. Thus, for example, the rate at which the delta of the Mississippi River is advancing into the Gulf of Mexico is nearly 340 feet per year. The deposit is often very deep as well as broad. The delta deposit of the Ganges and Brahmaputra rivers has been found by artesian borings to be not less than 500 feet deep. This delta covers a greater space than any other known, exceeding the combined area of Texas and California, or over twice that of Germany. Parts of the land formed by it are among the most fertile in the world, and the same is true of the delta of the river Nile. Some deltas push the earth out into the sea so rapidly that towns which were once seaports are now many miles inland. This is the case with the deltas of the Tiber and the Po, in Italy. Most deltas keep themselves clear by the force of their current, but a few are so sluggish that artificial means must be resorted to for the aid of commerce. This is the case at the mouth of the Mississippi, where the channel of the river is kept open only by an immense outlay. The deposits higher up in the bed of the river have raised it to such a degree that artificial banks, called levees, have been thrown up from year to year to check the overflow of the water upon the fertile bottom lands.

MOUNT MISTI, FROM AREQUIPA, PERU.
A Typical Volcanic Center of a large Earthquake Area.

Estuaries and Fiords

Deltas at the mouths of rivers are the exception, however, rather than the rule. Estuaries, or open bays, are far more common. These are due to two principal causes. Deltas are formed where the action of the ocean tides is feeble. On the other hand, where there is a decided ebb and flow of the tide meeting a strong river current the mouth of the river is usually in an estuary, or fiord (Scandinavian—fjord) as it is called—where the sides are rocky and abrupt. Fiords are common on the coast of Norway, British Columbia, and of Maine. Chesapeake and Delaware Bays are familiar and typical examples of estuaries, or bays. The rising and falling tide causing an alternate inward and outward flow, the river's mouth favors the formation of a bar through which the current of the river forces its way to the sea. Farther up the river, at the head of tide water, another bar is formed. This is well illustrated in the Hudson, at whose mouth a bar stretches across from Sandy Hook to Coney Island, penetrated by ship channels. The bar at the head of tidewater is near Troy, more than 150 miles up the river.



FIORDS ON THE NORWAY COAST.
A Typical Example of the Sea's Action on a Rugged Shore.

A glance at the map of Louisiana, showing the delta of the Mississippi river, or at that of Siberia, showing the Lena river delta, will give a good idea of how silt gradually builds up wide expanses of land.

Subterranean Heat.

There are no terrestrial phenomena about which writers are so given to inventing theories as about volcanoes and earthquakes. An ingenious theorizer has even intimated that since the earth began to cool down from a melted condition to the present time its diameter has decreased 189 miles. Whatever the decrease may have been, there can be no doubt that a great contraction has taken place and the shrinking of the earth's crust has brought about changes in its level, has determined the heights of mountains and plateaus, the sinking of valleys and plains, the depth of oceans and the present level of the sea.

Shrinkage of the Earth's Crust

Two causes have combined to produce this shrinking: (1) the contraction of cooling, and (2) the weight of the solid crust,— and these causes are constantly at work now. The deep sea bottoms, where the uniform temperature of the water is only a little above the freezing point, must be sinking more rapidly than the level of dry land, which averages about 60 degrees in temperature. Thus oceans have continually tended to become deeper without the abrupt changes of level that have taken place on continents by the crumbling of the earth's crust.

Subsidence and Elevation

The regions of subsidence of the earth's crust are naturally by far the most numerous. Among them may be named the entire Atlantic coast line of the United States, the deltas of the Mississippi, the Nile, the Ganges, and the Indus, and the coast of Australia, Holland, and Greenland. On the other hand, along the coast of Chile, Japan, and Norway the land has been gradually rising for many years. New Zealand is slowly tilting, rising on the one coast and falling on the other. Still more remarkable is the fact that evidences of alternate elevation and depression are plainly seen at certain points on the coast of Italy. The shore of the Bay of Naples is now rising perceptibly, after a subsidence continued through a great number of years. With the above facts in view we shall be better able to account for some of the phenomena of earthquakes.

Earthquakes

The comparatively new science of Seismology, the study of earthquakes, has received much attention in recent years. The invention of the seismograph and the seismometer enables the observer to detect and to measure slight shocks which would scarcely be noticed without their aid. They have proved that in certain localities, such as southern Italy, Japan and some Andean regions, very few days are free from earth tremors.

The crust of the earth is in a constant condition of strain, owing to its contraction upon the interior. If the strata yield suddenly and break under the strain, a more or less violent shock is felt. Thus earthquakes vary in severity according to the intensity of the shock which causes them. It is also seen that such a shock has necessarily no connection with a volcanic eruption, though the one is often a direct consequence of the other. The plateaus of Tibet are subject to severe earthquakes, although volcanoes are scarce in that region.

All Rocks Elastic

The velocity of shocks through hard rock has been known to reach for a limited distance a rate of 40 miles a minute. Motion caused by such a disturbance sometimes travels through immense distances at a rate of 600 miles an hour, as proved by the earthquake which devastated Northern Italy in February, 1887. When a progressive shock reaches soft and loose strata its energy is greatly reduced.

Earthquake Waves

The direction of motion in the surface of the earth produced by a seismic shock may be either vertical or horizontal, or partake of both. Even in the severest shocks the vertical movement is seldom more than one-quarter of an inch and the horizontal seldom more than double that. These figures are sufficient to account for the upward hurling of bodies as well as for the shattering and prostration of buildings. Extreme cases are infrequent; in the Ecuadorean earthquake of 1797, when the focus was directly under Riobamba, the vertical motion threw human bodies upward into the air a distance of 100 feet, and some were hurled across a river. It is probable that in this instance the focus of the shock was not very far beneath the surface, because the motion is naturally more violent near the center from which it proceeds, and the greater the intensity the greater the velocity.

The duration of shocks differs greatly, and seems to be governed by no fixed rule. The most violent shocks are usually felt first, and after that they are apt to decrease in intensity. Shocks felt in California often begin and end with one violent stroke. A much more frequent experience is a long continued series of slighter shocks. The earthquakes at San Salvador on one occasion lasted ten days, and those at Charleston, S. C., in 1886, continued to be felt feebly for nearly a month. From such facts we may fairly infer that a fracture in the earth's crust rarely settles itself, or finds a stable position, immediately, but returns to its equilibrium gradually.

Chasms were formed in the Calabrian earthquake of 1783 that were a mile long, 200 feet deep and 100 feet wide. Earthquakes are attended by other phenomena, such as changes in the position of walls and fences, the drying of springs, and disturbances in the level of streams and lakes.

The years 1905 and 1906 will always be memorable as two in which shocks were felt in many and widely separated portions of the United States.

Earthquakes Under the Sea

When a seismic disturbance takes place in ground lying beneath the sea the focus is often only a short distance below the water. The violent upheaval of the ground gives rise to a series of waves far more violent than those caused by any storm. When the first wave strikes the dry land, the water sweeps far over it and often causes great destruction of life and property. Such waves following the great earthquake at Lisbon, in 1755, the most disastrous recorded in history, drowned as many people as were killed by falling buildings; about 30,000 in each case. The terrified survivors of the earth shocks sought safety on the seawall and directly after they had assembled there the water rolled out of the harbor. It quickly returned in a great wave 60 feet high and completed the terrible work of destruction. The wave that followed a great earthquake in Japan, in 1854, was 15 feet high at a point 1,000 miles away and one and a half feet high on the distant coast of California. Such a wave travels over the sea with great velocity, but far less rapidly than does the vibration through rock.

Volcanoes

The old theory that earthquakes were caused by the sudden formation of steam beneath the ground now finds few advocates. It will be shown that volcanic eruptions are much more frequently traceable to the agency of steam. The old definition of a volcano—a "burning mountain"—is entirely inappropriate, from the fact that in a volcano there is no combustion going on, no flame, no smoke, no ashes. The dense clouds of steam and volcanic dust reflect the glare of the white-hot lava beneath and look like flame, or like smoke, when not thus lighted up. The so-called ashes are lava in a finely divided or powdered state. There can be no "burning," because there is no fuel.

There are only three substances thrown out by volcanoes—steam, lava and sulphur. The first is far more abundant, but not in all cases. Lava is a chief product of the quieter volcanoes and steam of most others. Sulphur and its gases are in very small quantities and are most common in Italy. Sometimes however, sulphurous gases are absorbed by rain and render it acid and poisonous to vegetation.

A volcano, unlike most mountains, is not the product of slow change in the Earth's crust, but is rapidly formed by a series of eruptions; sometimes by a single one, as will be shown by instances cited. The essential part is a rent in the rock coast through which steam and lava are forced up. At the outer orifice of the rent is the *crater,* or "caldera," a cup-shaped cavity. Sometimes there are minor rents around the principal one, with smaller craters. An eruption usually begins with an explosion which blows out the plug of the hardened lava, which had previously filled the rent, or a new rent is formed near the old one. Steam now rushes out, mingled with dust, forming a dense black cloud. Lava next follows, at first often with explosive force, then more quietly. Lava is melted rock, and its chief ingredients are those of most inferior rocks, namely:—silica, alumina, lime, soda, iron, etc. It often has steam diffused through it and is full of air cells, forming *pumice;* or if somewhat more solid is called *tufa,* or *scoria.* As the lava flows out, the substances build up around the crater or cone which often grows rapidly and changes the form of the volcano. Sometimes the sides of the cone-like mountain are split open, forming long fissures, from which other streams of lava flow. The lava often spreads out to a great distance, when it reaches the foot of the cone.

THE CRATER'S MOUTH, VESUVIUS.

Mont Pelee

An eruption on a very gigantic scale, exceedingly destructive of human life, unexampled indeed in the world's history in this respect—was reserved for the second year of the 20th century. In May, 1902, Mont Pelee, a volcano on the island of Martinique, one of the Lesser Antilles, after threatening for a few days previously, suddenly blew off its lava summit, and burst into violent eruptions, wiping out of existence every one of the 30,000 inhabitants of the city of

St. Pierre, situated at the base of the mountain a few miles distant. As no witness survived, the exact nature of the death-dealing agency is not known and never will be known. It is believed, however, by those best acquainted with the character of the volcano and the prevailing conditions that a deluge of fiery and poisonous gases, as well as of hot cinders, fell upon the doomed city. An examination of the human remains showed that death was quick—almost instantaneous. In addition to the population of the city, many inhabitants of the surrounding regions perished in like manner. Since the main eruption Mt. Pelee has been in frequent action, and a cone has been raised from the crater to a height of more than 1,000 feet. This in turn has been destroyed or distorted, and Pelee continues to give evidence that its neighborhood is not a safe abiding place for mankind.

THE SPANISH PEAKS, COLORADO.
An Example of Extinct Volcanoes.

Vesuvius

An eruption of Vesuvius, probably the best known and most thoroughly studied of all volcanoes, may be briefly described as typical of such phenomena. It was believed to be extinct until the year A. D. 79, when it sent up the famous flood of volcanic ashes which buried the cities of Herculaneum and Pompeii. Since that time it has been active or frequently intermittent. In April 1872, steam and clots of lava were thrown a vertical distance of nearly four miles, with a roar like the constant discharge of heavy artillery. The ground for many miles around the mountain was in constant agitation. Electrical phenomena—lightning and thunder—accompanied the eruption. Three heavy streams of lava flowed down from the crater and from long fissures in the sides of the mountain. Finally, muddy water fell in showers and deluged the land far around.

Krakatoa

The most appalling eruptions in the world's history were comparatively recent—that of Krakatoa in 1883, and that of Mt. Pelee in 1902. Krakatoa is, or was, a small island between Sumatra and Java, in Sunda Strait. The volcano on it had been more or less active from January, 1883, and on the 26th of the following August a series of violent explosions commenced, which ended two days later by hurling into the air the greater part of the island, and the forming, out of the fragments, two islands, seven miles distant. The city of Batavia, nearly 100 miles away, on the island of Java was covered with mud to the depth of three inches. It was fairly estimated that volcanic dust, visible 1,200 miles distant, must have been thrown to a height of more than ten miles. The dense cloud of dust, mingled with steam, plunged the country during the first day into midnight darkness for 200 miles around, and obscured the sunlight 1,000 miles away. The detonations were heard at points in India, 1,800 miles distant. The exposed parts of the island, says a geographical writer, "had in succession been shot off till the remnant was reduced to the water's level. The sea then poured down into the chasm, and millions of tons of water mingled with white-hot lava in titan throes until the ocean gained the mastery. On the shore, thirty miles distant, waves 100 feet high rolled with resistless energy, sweeping away every tree, house, and living being. Coral blocks, from twenty to fifty tons in weight, were torn from their beds and stranded two miles inland. Upon the stifled crater, after the eruption, the depth of water was more than 1,000 feet, where previously there had been an elevation of 1,000 feet."

TANGHANNOCK FALLS, near Ithaca, Ithaca, N. Y.

Origin of Lava

The assumption was formerly made that an eruption of lava proceeded from a supposed "liquid interior" of the earth. If this were true neighboring volcanoes would always be active simultaneously, but this is by no means the case. It is fair to assume that each vent is often supplied from a separate reservoir. Nor is it certain that the explosive force of steam, suddenly found, always starts a flow of lava, though this agent doubtless often comes into play. Most volcanoes are within a few hundred miles of the sea and many are very near it. Sea water may flow into underground cavities and, coming into contact with superheated rocks, may suddenly flash into steam with tremendous explosive effect. But, steam may be formed in another way. Underground porous strata are often saturated with water which may be pressed into volcanic vents.

In greater volcanoes, like Hawaii, the shrinking of the earth's crust may sufficiently account for the extrusion of lava. Under the enormous pressure of the upper strata a superheated rock may remain in the solid state; but when the pressure is relieved the heated rock may become liquid and is then quietly forced upward through fissures or upper vents. The number of active volcanoes on the globe may reach 500, most of them being on islands. Extinct volcanoes are far more numerous. Some long supposed to be extinct have suddenly become active. Seismologists find that most volcanoes are arranged in long lines, or zones, though several isolated groups exist.

Cascade System

Examples of volcanic phenomena on a grand scale are furnished by the still active volcanoes of the Caribbees, Central America, Mexico and Alaska. Between southern Alaska and south-central Mexico there are no active craters, but a large number of volcanic mountains in various stages of erosion which form an instructive series illustrating the internal structure of the mode of accumulation of ejected fragmentary material and of lava-flows. In this series of mountains built by igneous agencies, belongs the great volcanic piles of the Cascade region, of which Mounts Baker, Rainier, Adams, Hood, Jefferson, Mazama, Shasta, etc., are among the leading examples. Many other illustrations in the same connection, some of them in an advanced stage of erosion and now revealing only dikes and necks of resistant rock that cooled and hardened well below the surface, occur widely throughout the south-west portion of the United States. The still recognizable volcanic mountains of the continent, with the exception of those of the Caribbees, are confined to its western half, and with the exception of certain almost perfect craters in eastern New Mexico are all within the Pacific mountains. A great belt of volcanoes, including a large number of both active and extinct examples, extends from Panama to the Aleutian Islands, a distance of some 7,600 miles, and is a part of the so-called "circle of fire" surrounding the Pacific Ocean. This belt is about 1,000 miles broad in its central part, where only extinct volcanoes exist, and narrows toward both its northern and southern extremities, which are defined by still steaming craters.

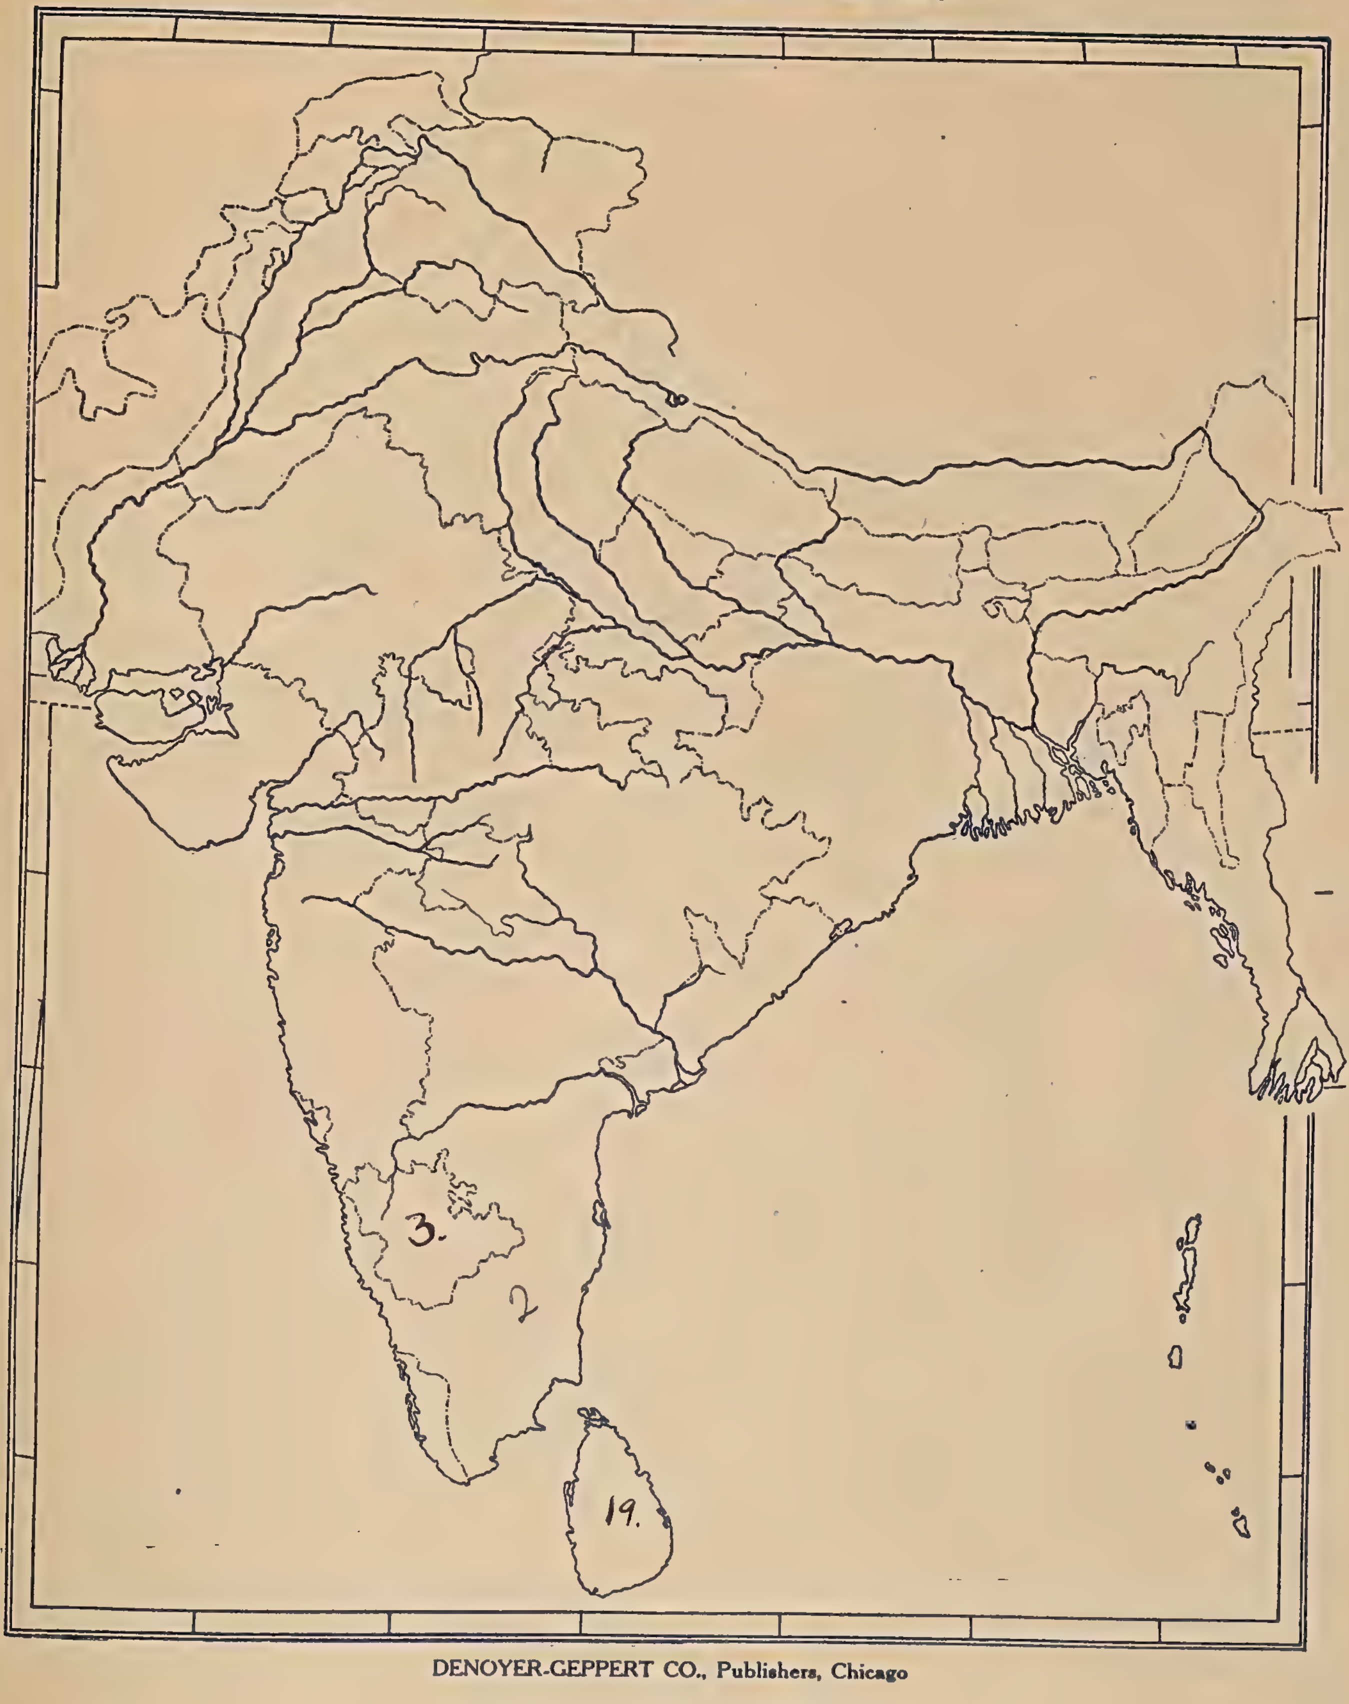
Volcanic eruptions in the older half of the continent have long since ceased, and the breaks which

Outline Map of India. No. 3016



DENOYER-GEPPERT CO., Publishers, Chicago

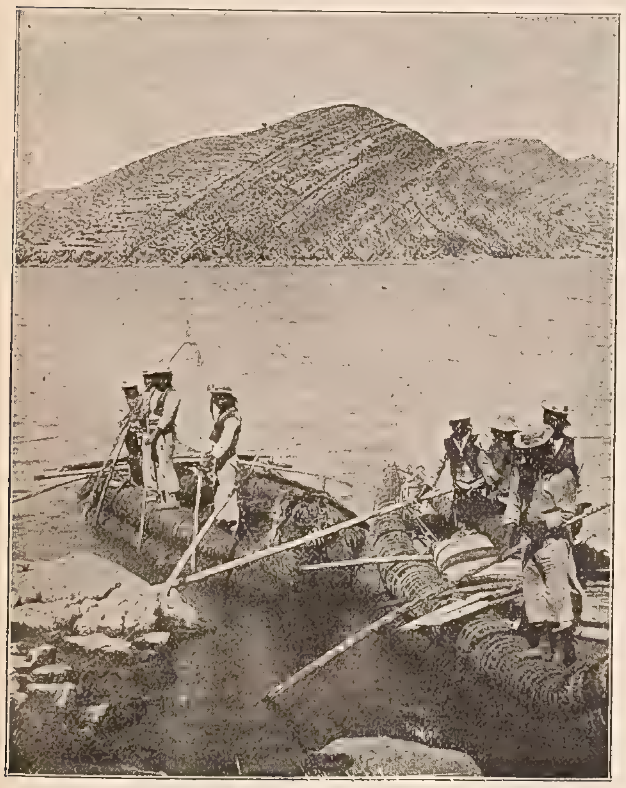
Atlantic Coastal Regions

gave them existence have been healed. The later movements in the western half of the continent have caused fresh fractures to form, through which molten matter has been forced to the surface. Many facts have been observed in each region which show an intimate connection between movements in the earth's crust which have produced fractures and the distribution of volcanoes.

"A great eruption took place in Mexico in 1750, when the volcano Jorullo (pronounced Ho-rul-yo) was built on the central plateau, burying fertile fields of sugar-cane and indigo. The outburst was preceded by earthquakes; the eruption continued half a year, building six cones and pouring out extensive lava flows. The highest cone, Jorullo, rose 700 feet above the plateau. The flows retained a perceptible heat for over 20 years.

Marine Eruptions

"Many examples might be given of marine eruptions. In 1867 a shoal was discovered among the Tonga Islands of the Pacific Ocean, the surrounding sea floor being about 1,000 fathoms deep. In 1877 smoke was seen ascending from the sea surface over the shoals. In October, 1885, an island had been formed two miles long and 200 feet high. At this time a terrific eruption was in progress, enormous clouds of constantly changing form rising over the island. The shocks of the explosion were felt in neighboring islands, and the sound was heard 200 miles away. As the island consisted chiefly of ashes, it has since been rapidly consumed by the waves, and will soon disappear unless new eruptions occur." An occurrence like this has but recently taken place off the coast of Japan, where "New Island" arose from the sea, was discovered by fishermen, and has already, though not yet two years old, been declared Japanese territory and is a point of call for coastal sailors.



LAKE TITICACA, BOLIVIA.
In the higher Volcanic Andes.

California Lava Beds

"In northern California there is a cinder cone of remarkably perfect form and certainly of recent date, although there is no record of its eruption. The cone, built of loose ashes, is 2,000 feet in diameter at its base, and rises 640 feet to a circular rim enclosing a crater 240 feet deep. From the size of trees growing on the ashes, it is estimated that the cinder cone was built about 200 years ago. The lava flow is younger, but none of the Indians or early settlers thereabouts (1845) observed its eruption."

California Earthquake

In closing this chapter it is not inappropriate to add some words descriptive of the most recent and, in some respects, the most terrifying of the world's great earthquakes—the California Earthquake, commonly, though inaccurately, known as the San Francisco Earthquake.

At about 8:30 A. M., Washington time, Wednesday, April 18, 1906, the seismographic registering instruments in all observatories throughout the United States recorded the fact that the entire region observable by them—and probably the whole of the North American Continent—was being rocked by a mighty series of earthquake tremors. These undulations, so considerable that at Washington, over 3,000 miles away from their apparent center, the recording pen passed off the register sheet, continued with marked violence for some hours, it being well into the afternoon before they subsided on the Atlantic coast. San Francisco was the ill-fated *crux* of this resistless seismic crash.

A TYPICAL ANDEAN VOLCANIC FORMATION.

At 5:10 A. M., Pacific time, when fortunately most of its inhabitants were yet safe in their homes and the towering buildings of the business section were for the most part empty, that portion of San Francisco's structure that would naturally yield to the tearing, toppling force of subsidence shocks, monster quiverings of Mother Earth's rocky cuticule, came crashing down upon each other and into the streets, or were twisted into mocking semblances of their wonted grace and stability. The first shock is thought by most witnesses to have lasted about three minutes; seismographs measured its maximum intensity at about 30 seconds. Closely following it, at about 5:15, another shock, equally sharp though less prolonged, followed; and in a few moments followed yet another, less severe, but, because of the mental strain caused by its predecessors, perhaps even harder on human nerves and human bravery.

Dread Results

Then, for a space, San Francisco held its breath and cast one horrified glance around over its own doom. And this is what it beheld: Gas mains wrenched and twisted in their earthy beds, leaking and sending their already burning contents to the sky; electric light wires down and power houses wrecked; and then darkness to intensify the horrors a thousand fold. Like the gas mains, the even more fragile water mains were wrenched so that their emptiness gave forth a hideously mocking sound as the few fire engines left from the universal wreck attempted to cope with the flames, which, almost in a moment, leaped up from a hundred crushed buildings ignited by the contact of broken live electric wires and escaping gas. Streets piled here and there to impassible heights by the fallen walls, timbers and girders, showed occasional open spaces, whence issued and crowded thousands of human creatures, never so frantic, never so irrational, never so helplessly feeble as when the basis of all our firm calculations—"the earth, immovable"—takes on motion, gives way to the unstable changeableness of the sea, and in a wink of the eye upsets all our preconceived notions of fixity and stability. Those who have not experienced a serious earthquake shock may never hope to realize its horrors; those who have, ever pray high heaven to blot that realization from their memories.

San Francisco had just reason to be proud of its public buildings, of its hotels, of its banks, of the residences of its wealthy classes. Nearly every one of all these yielded to the three seismic shivers, or succumbed to the equally destructive fires that followed in their wake on every hand.

Notable Losses

The $7,000,000 City Hall, the magnificent Grand Opera House where the virtuosi of the Metropolitan Company from New York lost fully $150,000 worth of their belongings, the Palace and Grand Hotels, the Lick House and the Valencia Hotel, the Santa Fe shops, the Fish Market, churches too numerous to name, banks in equal proportion, schools, seminaries, institutes, destroyed or burning, the exploded gas works, skyscrapers and business blocks almost without number and practically all the newspaper buildings doomed, chief among the latter, that of the *Call*, several miles of railway track approaching the city sunk; these were among the terrific results first apparent to the stunned survivors and telegraphed to the horrified world.

Human Sacrifice

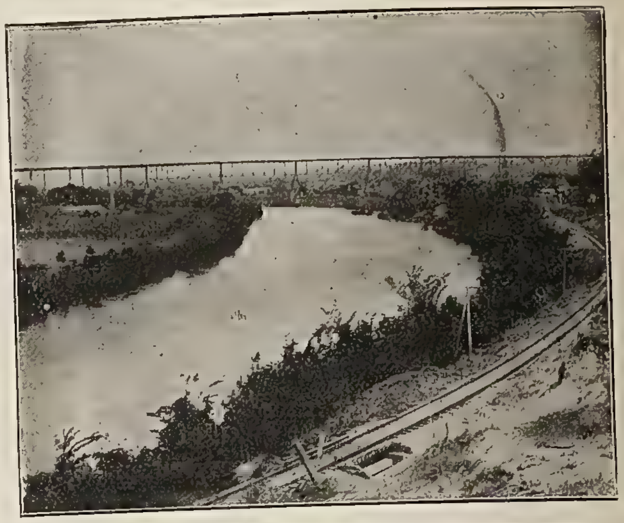
Many of the fallen buildings, and notably the hotels and larger lodging houses, had taken down with them scores, even hundreds of victims, many of them mercifully crushed to instantaneous death, others left pinioned to await the unspeakable torments of the flames. Literally thousands, mainly women and children, rushed into the street just as they had sprung from their beds; the recurring shocks and the fast following fires made it impossible to safely return for better apparel; few of those who ventured to do so ever regained the streets.

Of the later history and the results of this horrible visitation this is not the place to speak. Enough has been written to well illustrate the immediate results of the trembling of the earth's crust on a large scale in a thickly settled portion of civilization.

Early on the morning of August 16, 1906, a very destructive earthquake visited the Valparaiso, Chile, district, causing a great loss of life and property. This earthquake specially served to call the attention of the public to the seismic belt which extends along the Pacific coasts of both the American continents. Parallel to the Chilean coast, along its upwards of 2,300 miles, lies the same mountain chain which extends through the State of California. Volcanic forces are in constant activity along this chain, from the mid-Alaskan and Aleutian mountains systems, in the far north, to the ever-active mountains of Tierra del Fuego, in the remote south. As at San Francisco, two heavy distinct shocks about ten minutes apart, were felt at Valparaiso. Unlike San Francisco, however, the Chilean region was not treated to a period of seismic quiet, after the first devastation. On the three following days, August 17-19, 380 distinct shocks occurred. Conservative estimates place the loss at nearly two thousand lives, over one hundred thousand people homeless, and a property loss well in the millions of dollars, some estimates being as high as $200,000,000. Fortunately, Valparaiso, Chile's chief source of wealth, the nitrate fields, were not injured. The country's progress was not halted; but, as at San Francisco, the earthquake seemed to afford incentive for greater enterprise. Such events, however, can but have a depressing and deterrent effect on national, or local, growth, in spite of the popular energy.

THE CENTRAL MEXICAN PLATEAU.
A region once volcanic and still occasionally subject to seismic disturbance.

Late on the afternoon of January 14, 1907, a most disasterously fatal earthquake visited the south coast of the island of Jamaica, of the British West Indies, the capital city and principal port, Kingston, being the center of the disturbance. Several hundred, perhaps nearly one thousand persons, were killed. The principal hotels, mainly occupied by American and European tourists, were badly shattered, the Catholic cathedral and other churches, several school buildings, many of the principal warehouses and large stores, the government buildings and the clubs were badly wrecked. But Kingston stands on the opposite shore and but four miles away from where Port Royal, then a city of 35,000 people, sank out of sight beneath the sea, one beautiful Sabbath day, and though Port Royal, hidden under the coral insects' covering but plainly discernable through the crystal tropic waters, is one of the sights of the region, life has gone on about as before.



THE DES MOINES RIVER AT FORT DODGE, IOWA.

At about the same time as the Jamaica earthquake the island of Si Malu, or Hog Island, a Dutch possession in the East Indias, on the southwest coast of Sumatra, as a result of seismic shock and a tidal wave, disappeared beneath the sea, leaving no trace of its former existence, of its nearly 2,000 inhabitants. Sumatra and Java have a continuous backbone of volcanoes, either active or recently extinct. The inhabitants of all that belt live over a veritable bubbling cauldron, covered by a very thin and inadequate scum—the earth's crust, through which the pent-up energies beneath manifest themselves in some way almost daily. An interesting feature of these disturbances is the subsidence of the Texas oil wells, half having stopped flowing.

MT. MISSOULA, MONTANA.

THE CONTINENTS AND THEIR STRUCTURE.

The continents may be said to number six: North America, South America, Eurasia (Europe-Asia), Africa, Australia, to which five now generally is added the sixth, Antarctica. Some geographers, however, only number three continents, ignoring Antarctica, and considering the two Americas as one and Africa but a part of the Eurasian land mass. Others still regard Australia as the largest of the islands of Oceania; and still others regard it simply as an insular portion of Eurasia. The division of the land of the globe into six well defined major masses, commonly called continents, is now, however, generally accepted as the most harmonious classification. That arrangement will be followed here and these land masses will be considered in turn, with reference to their major characteristics, or individualities.

North America.

The total area of the continent of North America, counting in with it Greenland, the West Indian islands, and Central America to the southern border of Panama, is variously estimated as from 7,750,000 to 9,450,000 square miles, in round numbers. Probably eight and one-half millions of square miles is a fair estimate. The continent is variously divided by geographers, with reference to its slopes and basins. These can, in view of the great bodies of water into which they drain, be grouped into four great watershed areas: The Arctic, Atlantic, Gulf and Pacific Drainage Basins. The best known of these is unquestionably the Atlantic Slope or Basin, within which more than one-half the entire population of the continent dwells, it having been the first part of the mainland to be settled by Europeans. In the United States it has an average width of about three hundred miles and it extends south to the lower point of Florida. That portion of it north of Massachusetts Bay has a high and rocky coast fringed with islands.

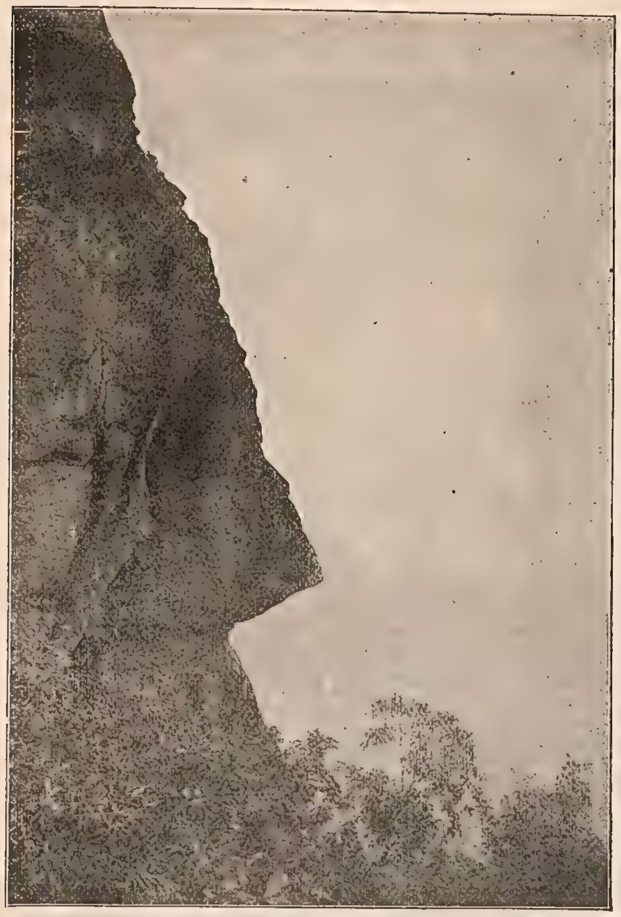
Apalachian Plateau

The Apalachian Plateau, which skirts the western edge of the Atlantic Slope, extends from the Height of Land, north of the St. Lawrence river, in Canada, to the iron-bearing foothills of Northern Alabama. The rolling land which marks its eastern margin rapidly rises into the Blue Ridge, then into the Allegheny Mountains, and west of these disappears down the farther slopes of the Cumberland Plateau. The loftiest peak of this system is Mt. Mitchell, in North Carolina, 6,711 feet above the sea. Mt. Washington in the White Mountains of New Hampshire, long thought to be the highest point east of the Rocky Mountain slopes, is about four hundred feet less in height than Mt. Mitchell. The entire Apalachian Plateau has a mild and healthful summer climate and affords a welcome and popular refuge from the sultry plains on both sides of it. No section of the continent is so rich in its varieties of trees, and perhaps, no like area exceeds it in mineral wealth.

West of this Plateau, bounded on the north by the Laurentian and Hudson Basins and on the south by the Gulf and Texas slopes, is the vast Basin of the Mississippi-Missouri drainage system. The richest part of this great area is that drained by the Mississippi and its tributaries and includes the prairies of the northern and central western states and the cotton and corn land of the south and southwest.

Rocky Mountain Plateau

Compared with the Apalachian highlands, the Great Western Plateau, in which the Colorado Basin and the higher elevations of the Mississippi Basin and Pacific Slope rivers take their rise, covers a far more extensive region. This is more frequently known as the Rocky Mountain Plateau. In British Columbia the forests of this Plateau are abundantly watered by rain; but south of that region the climate becomes dryer and in parts of Nevada, Utah, Arizona, and Northern Mexico the region partakes of the character of a desert. In many places the soil is not only barren and sandy, but actually alkaline. In that portion known as the Great Interior Basin the streams flowing from the mountains have no outlet and are either absorbed into the thirsty soil or are returned to the atmosphere by evaporation from lakes, some of which are quite salt. Large portions of this plateau are so destitute of rain that they can be rendered productive only by artificial irrigation.



WHITESIDES MOUNTAIN, NORTH CAROLINA.

Alaskan Alps

Although the western plateau becomes greatly reduced in height northwest of British Columbia, a mountain range runs close to the Pacific Coast in Alaska, known as the St. Elias Alps, which rises in certain peaks to a greater height than any other elevations of North America. Mt. St. Elias is 18,024 feet high. Near it is Mt. Logan, 19,500 feet, and now Mt. McKinley recently measured by triangulation, is claimed to reach a height of 23,464 feet, or nearly four and one-half miles above the sea.

Pacific Slope

Farther south, in the Pacific states and in Mexico, the western plateau sustains ranges of lofty and rugged mountains, running in a generally north and south direction. Near its eastern border is the great Rocky Mountain system with its component ranges, the Sangre de Cristo, the Colorado Range and the Wind River Mountains, all having peaks exceeding 14,000 feet. In Mexico the Sierra Madre Mountains, a continuation of the Rockies, have peaks towering above those last named, the volcano of Orizaba, long thought to be the highest pinnacle of North America, reaching 18,314 feet. The great plateau is flanked on its western border by the Cascade Range including summits over 14,000 feet high, and east of this is the Sierra Nevada, crowned by Mt. Whitney, 14,502 feet, the highest in the United States outside of Alaska. At the opposite extreme of elevation, yet not far southeast of this peak, is Death Valley, more than four hundred and twenty-seven feet below the sea level, and a little further south the Salton Desert, or Sink, averaging more than two hundred and fifty feet below the sea. The latter, owing to the carelessness of engineers in charge of a neighboring irrigation project, has been overflowed and turned into a vast inland lake and may now be called the Salton Sea. Against its further inroads heroic efforts have been made.

West Indies

North America has two important groups of continental islands, or islands attached to the continental shelf; the West Indies and the Arctic Islands. The former north and east of the Caribbean Sea, comprise the Greater and the Lesser Antilles, Cuba being the largest and most important, as well as one of the most fertile and beautiful garden spots of the world. The group consists of about thirty principal islands surrounded by numerous smaller ones, having a combined area of something more than 90,000 square miles, and a population of approximately 5,000,000. Cuba, Haiti, Porto Rico and Jamaica are grouped together as the Greater Antilles. East and south from the Virgin Islands passage the Lesser Antilles extend from the Island of St. Thomas to Trinidad, at the mouth of the Orinoco River; some geographers also put the islands immediately north of South America in that group, thus extending it to the island of Oruba, north of the Gulf of Venezuela. North of these two divisions is the Bahama group, made up to a great extent of low-lying, sandy coral formations something over 1,200 in number.

THE DAKOTA BAD LANDS.

Of the Antillean members of this extensive group of continental islands, nearly all are remarkable for their great fertility and the variety and wealth of their vegetable products.

The forests, of the larger islands especially, are of vast extent and of very great value. Those of Cuba alone covering not less than 20,000 square miles, the royal palm, mahogany, ebony and logwood products being largely exported. The greatest wealth of the islands has been in the production of sugar, molasses, rum, coffee and tobacco; but in recent years tropical fruits, especially bananas, oranges and pineapples and early spring vegetables for the American market are vying with the older exports in totals of value.

While the greater Antilles and the Bahamas are only occasionally visited by earthquakes, and have no active volcanoes, some of the lesser Antilles have recently been the scenes of marked and terrific seismic convulsions. Under earthquakes will also be found a consideration of recent disturbances in Jamaica. Active volcanoes are also found on other islands of the group and all of the West Indies are from time to time visited by minor earthquakes, mostly of the nature of subsidence shocks, occasionally doing considerable damage because of the usually frail structure of tropical architecture.

Andean Plateau

The Andean plateau, bordering closely upon the Pacific Ocean throughout its whole length, is not unnaturally considered a continuation of the great Rocky Mountain system of North America, the two making together an almost uninterrupted range over 10,000 miles long, the longest continuous mountain chain on the globe. It is more proper, however, to consider these two systems, the Rockies and the Andes, as portions of the great mountain back-bone of the western hemisphere, the lowest point in which is to be found near Lake Nicaragua in the Republic of the same name. The highest railroad pass in the Andean plateau, and also the highest railroad point in the world is a little over 15,000 feet above sea level, being somewhat higher than the top of Mt. Blanc in the Swiss Alps, and a thousand feet above Pikes Peak in Colorado. This pass is in continuous use as a highway of commerce, on the path from the Pacific to Lake Titicaca.

The narrow strip lying between the Andes and the Pacific Ocean is, for reasons elsewhere set forth, almost a rainless desert, with but a few short rivers.

In the southern part of the great plain or valley of South America, are found the *Pampas* of Argentina, and Southern Brazil, where rain is scarce and forests are almost unknown. Like the prairies of the western states of the United States, this is the natural home of wild cattle and these, ranging over the grassy plains, constitute the chief wealth

MT. MITCHELL, NORTH CAROLINA.

The Pampas

of all that vast region. In the central and northern part of this Continent is the great valley of the Amazons, mainly covered with forests, known as *silvas*. Still farther north is the fertile valley of the Orinoco, a region, for the most part, almost unknown to civilized man, holding out, both in the richness of its vegetation and the value of its mineral products, what is probably the greatest promise to the explorer and the adventurer in commercial fields.

Africa.

Africa, which by the digging of the Suez Canal has become an island, has an approximate area of 11,600,000 square miles, almost equally divided by the Equator. In its southern extremity the Continent is within the South Temperate Zone, and here the surface is rugged and rich in valuable mines. The diamond fields of Griqualand are the deepest and most productive in the world, and the giant gold reefs of the Transvaal, or "Rand," attract thousands of miners.

African Deserts

In the North Temperate Zone, Northern Africa has the hot climate of the Tropics. Through this portion of the Continent the Atlas chain of mountains extends for about 1,500 miles. The Tropic of Cancer passes through the middle of what is the most extensive desert region of the world, the great Sahara Desert, with the Lybian and Nubian Deserts as eastern continuations. This desert belt, it may be said parenthetically, extends in a continuous stretch through Arabia, Persia and Northern Afghanistan across Tibet and Mongolia and ends with the Little Gobi Desert (Gobia Shamo) in Manchuria, being broken only by the Pamir system of the Himalayan Mountains.

The Sahara Desert extending southward into the wilderness of the Sudan, is largely covered with bare rocks and drifting sands, a most inhospitable region, to cross which in many places, from verdure-clad oasis to oasis, the traveler undertakes as serious dangers as does the sailor upon the most treacherous seas. A small part of the Sahara is below sea-level; but its average elevation is nearly 1,500 feet.

Rivers of Africa

By far the largest area of Africa lies within the Tropics, where a low central plateau, watered by a few great river systems, is the topographic characteristic. The most important of these rivers are the Nile, the Niger, the Kongo and the Zambesi, to all of which reference has previously been made in our section on rivers. Near the Equator are found the largest lakes, and the highest mountains of the Continent. The peaks of Kilimanjaro and Kenia in Eastern Africa, are not far from four miles in height, and the great lake system, which furnishes the head waters of the rivers, above enumerated, is only second to the St. Lawrence system of the North American Continent in volume of fresh water.

Madagascar

The only important island near enough to the coast of Africa to belong to the continental class is Madagascar, near the southeast coast, the third largest island in the world, being nearly one thousand miles long and three hundred and fifty in its greatest width.

Australia.

The area of Australia, the smallest continent, is about the same as that of the United States of America, exclusive of Alaska, viz: approximately 2,946,691 square miles. The Tropic of Capricorn divides Australia into two portions, that in the South Temperate Zone being the larger. Near the Eastern coast are ranges of Mountains, the highest of which are known as the Australian Alps. The Western coast is also mountainous, but not extensively so, and the entire surface of the Continent between these two highland regions is mainly a low plateau, gently undulating, nearly destitute of rain-fall, practically barren deserts for great stretches of its area, not yet thoroughly explored. The Australian "bush," as it is called, is for the most part only suitable for grazing, and then only under circumstances of the most favorable sort when carried on on a large scale. The gold districts of this Continent have long ranked second to those of California; although in recent years those of the Transvaal and especially those of Alaska have been close seconds.

New Guinea ranks as the largest island in the world with an area equal to about one-tenth that of the adjoining continent and a length of nearly fifteen thousand miles. It evidently once formed a part of Australia, being separated from it only by the narrow and shallow Torres straits. The unhealthy climate of the coasts, the violent and irregular winds, and the hostile character of many of the native tribes, have thus far proved serious obstacles to exploration. There is every evidence of great fertility of soil. The animal resources invite the study of the naturalist, with a wealth of species of birds, snakes, butterflies and beetles unsurpassed.

IZTACCIHUATL ("The Sleeping Woman"), MEXICO.

Tasmania

Tasmania, formerly known as Van Dieman's Land, lies south of Australia in latitude 41° to 44°, and therefore enjoys a temperate climate. Cut off by Bass strait from Australia, a former connection with which is still attested by chains of intervening islets, the two are closely alike in many respects, though very dissimilar in size and outline. The very broken coasts of Tasmania are studded with projections and indentations, and for the most part the coast is very rugged and forbidding.

New Zealand

New Zealand, divided into North and South islands which are separated by a very narrow strait, lies in a curved line nearly nine hundred miles long and very narrow in proportion. It stretches from 34° to 47° south latitude and thus affords a variety of climate well suited to settlers from the North Temperate Zone, who have been attracted there in large numbers in recent years. The highest peak, Mt. Cook, near the center of the island, is about 12,400 feet high, more than 3,000 feet above the highest in the North island. New Zealand, unlike Australia, has some volcanoes, a few of which are active. The geysers surpass even those of Iceland in grandeur and interest. The mineral wealth of the islands is remarkable, including ores of silver, copper, lead, zinc and manganese, and the coal mines yield large supplies of a high grade. But the chief mineral wealth of the colony is in its gold, which has already been produced to the value of over $200,000, both from quartz mines and drift. On the whole, few regions remote from the great centers of civilization present greater attraction to settlement than does New Zealand.

Eurasia.

The vast island, which is known to geographers as Eurasia, which includes, as the name indicates, Europe and Asia, is by far the most extensive of the Continents, with an approximate area of 20,300,000 square miles; an area exceeding the combined surfaces of North America and Africa. These two grand divisions, Europe and Asia, divided along their northern line by the Ural Mountains, are not, strictly speaking, physically separate, nor are they longer politically so, since the Russian Empire has aggrandized to itself the whole of the northern sweep of Asia to the Pacific Coast. This vast continent is the most varied in its contour and its topography of any, presenting a complicated array of lowlands and highlands in strong contrast to the simpler relief of the other Continents. The whole northern part is occupied by the most extensive plain on the globe, extending from the Atlantic Ocean on the West, to the Pacific Ocean and Bering Strait on the East, through nearly 180 degrees of longitude, or about one-half way around the globe, on the 60th parallel of north latitude.

Eurasian Plain

Roughly estimated, this vast plain has a length of not less than 9,000 miles, and an average breadth of 2,000. The northern limit of this plain throughout its whole extent is the indented and ramified shore of the Arctic Ocean. The southern boundary in Asia, is mainly the Altai Mountain system, extending eastward into the less elevated Yablonoi ranges. In Europe this great plain is bounded southward by the Caucasus Mountains and the Alps and Mediterranean Sea. By far the greater part of this vast continental level is owned by the Russian Empire, and in its extreme northern portion, as it approaches the Arctic Ocean, it includes one of the dreariest and most forbidding regions of the globe, the barren Steppes and the swampy frozen tundras of Siberia. The southern portion, however, in central Europe as well as in Asia Minor and northern Persia, includes some of the most extensive and productive garden spots of the world.

Eurasian Mountains

The Scandinavian Mountains, of moderate height, extend northward through Norway; south of the great plain, beginning on the extreme west of the Continent, the lofty range of the Pyrenees, bounds the Iberian Peninsula on the north, and thus separates France from Spain. This system is continued on the east by the Jura Ranges and the still higher Alps, of Switzerland, Italy and Austria, the culminating peak of which is Mt. Blanc, nearly three miles above sea-level. The Apennines, an offshoot from this east and west system, send their spurs through Italy, and to the south-eastward of the same system the Karpathians pass south of Austria, being continued, apparently, by the Caucasus system south of Russia. Beyond the Caspian Sea in Afghanistan and extending through the western part of this vast continent, beneath and up into the Chinese Empire, north of and down into the Indian Peninsula, is found a bewildering array of mountain systems, including the loftiest peaks and plateaus of the globe. The traveler finds on its southern border the loftiest elevation of the planet, the matchless Himalaya range, with its crowning peak, Mt. Everest, five and one-half miles high.

FALLS OF THE ZAMBESI IN AFRICA.

Eurasion Peninsulas

The extreme southern border of Eurasia is marked by a series of great peninsulas, including Indo-China, that of the Malay States, Hindustan (India), and Arabia, all extending into the Indian Ocean, with Greece, Italy, and Spain, jutting from the European portion into the Mediterranean Sea. On the eastward coast of this Continent, Korea and Kamchatka, are also peninsulas, extending into the Pacific Ocean. The large part of the most hospitable interior and the southeastern part of the Continent, are occupied by the Chinese Empire, the most populous country of the globe.

Great Island Systems

The most important minor seas, bays, and gulfs, not only along the Atlantic Ocean and the Mediterranean Sea, but on the Indian and Pacific shores and the Arctic Ocean as well, are not less than thirty in number. Contrast with this the sister Continents of Africa and Australia, which together have scarcely five of any importance. The continental islands of Eurasia, too, are in vast array. The most important in size of them all, extending from the south point of Kamchatka, to the north limits of the Philippine Islands, comprise the Empire of Japan. Far more important than these in the exertion of power and their influence upon the Political Geography of the world, though not in size, are the islands of the United Kingdom of Great Britain and Ireland.

Great Britain

The coast of Great Britain is more deeply indented with inlets, bays and firths than any other of equal extent and importance in the world: a fact which has favored the commercial supremacy of the British Empire. Ireland is noted for its abundant moisture of the atmosphere, a fact which has contributed greatly to its fertility and the continuous freshness of its verdure, and has earned it the name of the "Emerald Isle."

Eurasian Islands

In the Mediterranean Sea the largest and most important islands are Majorca, Corsica, Sardinia, Sicily, Crete, and Cyprus, all more or less favored with a fine climate and a fertile soil. Etna and Stromboli are active volcanoes, the latter being constantly in eruption. Iceland, just touching the Arctic Circle in the North Atlantic, has an active but comparatively quiet volcano, Hekla, and the geysers of the island have long been known, though surpassed in interest by the more recently discovered geysers of New Zealand and the Yellowstone.

Ceylon

Ceylon, south of Hindustan, the only large island beside Madagascar lying wholly within the Indian Ocean, is declared by some travelers to be the most beautiful, and wondrously fertile of the world's insular lands. It was evidently once connected with the Continent, and has undoubtedly been slowly rising from the sea since remote ages. Valuable pearl fisheries are maintained on the northwest coast, while rubies, sapphires, amethysts and moonstones are met with in great abundance.

Borneo

The two most interesting of the great islands lying between the continents of Eurasia and Australia are Borneo and Java. The area of Borneo is but little less than that of New Guinea, or Papua, and though it has been more thoroughly explored, there is still much to be learned of its interior, which is centrally occupied by a plateau from which ranges of mountains branch in various directions.

THE FORBIDDING ANTARCTIC COAST.

Of the entire population of Borneo, roughly estimated at two millions, the Dyaks and Malays are the most numerous. The former are divided into various tribes, all noted for their natural intelligence and high morality. The largest mammals are the Rhinoceros and the Elephant. The larger apes are also numerous, this being the natural and chief home of the Anthropoid group, of which the Orang is the principal, being found only in this island and in Sumatra. Borneo is rich in minerals, among which gold, copper, tin, quicksilver and diamonds hold a prominent place.

Java

Of the world's tropical islands, none, not even Cuba, ranks in importance with Java, whether we consider its fertility, its economic resources, the mildness of its climate, the beauty of its scenery or the density of its population. Many of the mountain peaks are volcanic in their character; the highest of them all reaching nearly two and a half miles. The water courses of Java are hardly of sufficient size to deserve the name of rivers. The river Solo is the largest. In addition to its great wealth of cultivated crops, notably coffee, sugar, tobacco and rice and quinine, Java has a natural luxuriant flora. The forests are rich in ferns, tree-ferns and palms, and the vast prairies are densely covered with mammoth grasses. Birds and mammals abound. The Javan Rhinoceros differs from its congeners in having but one horn. The wild hogs are numerous and destructive. Tigers are still sometimes hunted, and Leopards are not uncommon. There are also many species of the monkey and bat tribe.

Japan

Passing by the Philippines, which will be noticed as a possession of the United States, the islands constituting the Japanese Empire, from Formosa to the lower half of Sakhalin and the Kurile Islands, next claim attention. Four of these are of considerable extent, viz: Hondo, Yezo, Shikoku, and Kinshiu, while the rest, believed to be over 4,000 in number, vary from small uninhabited and barren islets to the fertile and beautiful islands of the "Inland Sea" (Seto Uchi), south of Hondo. Its northern extent, the long chain of the Kurile Islands, is cold, barren, volcanic and most forbidding, inhabited only by a hardy and unenlightened race of fishermen, the Ainus, usually called "the Hairy Ainus."

Like New Zealand, Japan has the advantage of a situation in the Temperate Zone, and, consequently is adapted to the home of progress and enterprise. Owing to the shape of the islands, the rivers are short, the longest being scarcely one hundred and seventy miles in length. The lakes are numerous but mostly small. Many of the mountains are volcanoes, mostly extinct, or at least quiescent for many years past; but a few are still active. The best known of the latter is Asami-Yama, which has had destructive eruptions during the last century. Earthquakes are frequent, and many have been disastrous within recent years.

Japan's Riches

Gold, silver, iron, and copper abound in Japan and the value of the two precious metals exported since foreigners have been admitted to the country, exceeds several hundreds of millions of dollars. There are productive coal fields, yielding a very fair quality of bituminous coal, in Kinshiu and Yezo. Japan may well be termed, as it is, the "Flowery Empire," and travelers are in agreement that few countries can boast greater wealth and beauty of bloom. Rice and cotton both thrive there; fruits of various kinds are rich and abundant, and have furnished the civilized world with many new varieties, as shown by the frequent prefix—Japanese.

Antarctica.

Most maps present the Antarctic Ocean as a very important body of water, but the now well-nigh certainty that a vast continent encircles the South Pole is now strengthened by each succeeding report brought back by Antarctic navigators. This is especially true of the discoveries of Captain Scott's party, on the voyage of the British ship *Discovery*, who on January 1, 1903, reached a point in latitude 82° 17″ south. Captain Scott then saw the high plateau which begins with Mounts Erebus and Terror in South Victoria Land, trending toward the Pole. Heretofore, the great ice barrier formed by the glaciers discharged from this plateau has prevented ships from landing upon or even seeing the mainland which, as there is now good reason to believe, extends from the Mts. Erebus and Terror region across the Pole all the way to Graham Land and almost to the South Shetland islands. It is probable that from this latter point, which is nearest to South America, the coast of the Antarctic Continent roughly follows the Antarctic Circle on south of Africa and thus continues to Wilkes Land, south of Australia, and thus returns to Victoria Land.

BEDOUIN CAMP ON ROUTE FROM TUNIS TO CARTHAGE.
A Typical Northwestern Desert Scene in Africa.

A GIANT BANYAN TREE.
Typical of the luxuriant vegetation in Java.

The continent thus enclosed by the Antarctic Circle may have an area of over eight million square miles, far greater than that of South America.

Recent Polar Discoveries

The voyages of discovery to both poles have been frequent and numerous, as well as productive, during the past few years. To the north, the names of Peary, Abruzzi, Cagni, Nansen and Sverdrup quickly occur to us as of those who have discovered new passage ways and charted new islands and coasts. The first, especially, has been foremost as an intrepid, undiscouraged searcher for the Pole, and he now makes the claim to have penetrated to the Pole itself. To the south the names of Scott, Gerlache, Cook, and others as daring, deserve equal renown. While remembering these and their achievements we must not forget Amundsen and his six brave companions, who, in their tiny 70-ton schooner rediscovered the Northwest Passage and the first ever to actually sail through it.

THE MINERALOGY OF THE LITHOSPHERE.

All forms of matter that compose the earth are either organic or inorganic. Organic (organized) substances, are the result of life, either vegetable or animal. Inorganic substances are lifeless, in the common acceptation of the term, and belong to what is known as the Mineral Kingdom.

Mineral Kingdom

Strictly speaking, every inorganic substance, solid, liquid or gaseous, is a mineral, including the air we breathe and the water we drink. Minerals are divided into two classes, metallic and non-metallic. It was formerly supposed that many of the common minerals, such as clay, slate, limestone, common salt, and other crystalized salts, are non-metallic; but a great chemist discovered at the beginning of the 19th century, that even these have metallic bases. Thus the base of clay and slate, is the metal aluminum; of limestone, marble, and chalk, the metal calcium; of common salt the metal sodium; of potash and its compounds, the metal potassium. But these metals have so powerful an affinity for oxygen, that they are never found in the metallic state, and with the exception of aluminum, are of little use to man, except in their combinations. Metals are very numerous, but those which are of use to man in the metallic state, are twelve in number. These include the precious metals, gold, platinum, silver and aluminum, and the cheaper ones, iron, copper, lead, tin, zinc, nickel, antimony and mercury.

Gold

Gold owes its high value chiefly to the fact of its very slight affinity for oxygen, the element which corrodes nearly all other metals. A gold pen may lie in ink or vinegar, or even in nitric acid for a year, and when taken out will be found entirely free from tarnish or rust. Gold occurs sometimes in the crystalline shape; but more frequently in irregular masses, from large nuggets to coarse dust. In these forms it is usually scattered in beds of sand and gravel, either under water or in dry banks. A still larger supply is obtained from veins in quartz rock, the fragments of rock being broken up by machinery, the particles of quartz washed out by water, and the fine gold dust taken up by quicksilver, from which it is afterward separated by heat.

Gold, when in the pure state, is about nineteen times as heavy as water, and is too soft to be used in jewelry or coin, and must be hardened by being alloyed with copper or silver. Pure gold is said to be 24 carats fine; but even when only 10 carats. the alloy is proof against rust. United States gold coin contains one ounce of copper to 9 ounces of gold, and is called 18 carats in fineness.

Platinum

Much that has been said about the native purity of gold, is true also of Platinum. It is heavier than gold, and far more difficult to work, on account of its unfusability. It is produced in comparatively small quantity, not much over 6,000 lbs. each year, the principal source of supply being the eastern slopes of the Ural Mountains. It is chiefly in demand by chemists, dentists and electricians.

Silver

Silver has been so largely produced in recent years that its value compared with gold has fallen to about one-half what it was in 1870. An ounce of silver was then worth one-sixteenth of an ounce of gold. It is now worth less than one thirtieth. Silver is found native, both pure and alloyed with gold, copper and mercury; but it more frequently occurs combined with sulphur, for which it has a strong affinity. Silver though more readily tarnished than gold, keeps its brightness well, and this fact in combination with its brilliant luster adapts it for coinage as well as for ornamental wares.

MINERALOGY OF THE LITHOSPHERE.

Aluminum

Aluminum, by far the most abundant of the metals, was until quite recently prepared by so difficult and slow a process that it was one of the most costly. The abundance of this metal adds to its interest. It comprises as much as one-twelfth of the earth's crust, and its ores, instead of being found in scattered localities, are everywhere about us, in clay, slate, feldspar, and many other common minerals. This ore is reduced by heating it with sodium. Certain gems, notably ruby and sapphire, are pure aluminum. The process of extraction has cheapened in recent years so much that it is now less expensive pound for pound than copper. Notwithstanding its high affinity for oxygen, it resists corrosion when in a metallic state to a remarkable extent. The great lightness of aluminum, only two and one-half times as heavy as water and but one-fourth as heavy as silver, renders it in great demand for purposes where strength combined with lightness is desired.

Iron

No metal can dispute the palm of utility with iron, the most abundant of metals next to aluminum. Iron rarely occurs native; but meteors falling upon the earth from surrounding space are sometimes found to consist of metallic iron. It is one of the very few metals found in the ashes of plants, and in the blood of man and the lower animals.

Steel

Steel, by far the most useful form of iron, stands midway between cast and wrought iron in the proportion of carbon present, varying in that respect from one-half to two per cent. The old process of making it was to heat bars of iron to redness for a number of days in contact with powdered charcoal, carefully excluding air. Now the familiar and far less expensive Bessemer process is employed, by which a part of the carbon is burned out of melted cast iron by means of a blast of air forced through it. Other elements are then introduced to purify the mass, and the melted steel is cast into ingots. For the finest articles of cutlery more expensive processes of making steel are still resorted to.

THE YABLONOI FOOTHILLS.

Copper

Copper, the most useful of metals next to iron, was worked at an earlier period than the latter, but always far less abundant. It is not only found native, but in a great variety of ores, the most common being the sulphide or copper pyrites. In the copper mines of the Lake Superior region, blocks of native copper have been found as well as in those near Butte, Montana, weighing from 50 to 250 tons.

Lead

The chief ore of lead is the sulphide, or galena, which, as previously stated, often contains much silver. It is a heavy metal and so soft that it can easily be cut with a knife, or even indented by the finger nail. Certain natural waters act so freely on lead, that the metal cannot be safely used to convey them on account of the poisonous character of the salts of this metal.

Lead enters largely into several valuable alloys, such as pewter, britannia metal, pipe metal and stereotyped plates. On account of its weight it is employed by counterfeiters in making spurious coin, and it is known that in order to give it the desired ringing sound a little glass is added.

A SAPPHIRE HUNTER, NORTH CAROLINA

Tin

Tin is almost the only useful metal that has not yet been found in paying quantities, within the limits of the United States. In fact, it occurs in very few localities on the globe; yet it has been known to man from very ancient times. Rich mines are worked in Bolivia, Peru, the Islands of Tasmania and Banka, in Malacca and New South Wales, and at Cornwall, England; the latter being far the most famous. Pure tin, not alloyed or associated with other metals is seldom used, but it forms an ingredient of many valuable alloys.

Zinc

Zinc, like lead and tin, is never found in nature in the metallic state. Its commonest ore is the sulphide, zinc-blende. As the metal is not easily oxydized, and therefore resists the action of water, it is largely used in the sheet form for lining cisterns and tanks as well as for roofing. This metal is largely used in the making of galvanic batteries.

Antimony

Antimony is an important ingredient in type metal. If lead were used alone in casting type it would shrink in passing from the liquid to the solid state and would therefore not make a sharp impression. Antimony on the other hand, expands slightly in solidifying, and a mixture of the two metals in the proper proportion fills the mould exactly and makes perfect type. Antimony is also used in other useful alloys to give them a proper hardness, without rendering them too brittle.

Nickel

Nickel is a blueish-white metal, with almost the luster of silver and nearly as great power to resist the tarnishing action of the air. Its comparative cheapness adapts it to many ornamental purposes, in which it partly takes the place formerly filled by brass and bronze. It is used in the lower denomination of coinage, in the cases of cheap watches, and in electroplating.

Mercury

The only important metal that assumes the liquid form, at ordinary temperatures, is Mercury, otherwise known as Quicksilver. This interesting metal has nearly the luster and the color of melted nickel, or of tin. It freezes or becomes solid at a temperature of about 40 degrees below zero, and boils or vaporizes at 360 degrees. Fahrenheit. It is one of the heavier metals, being of nearly 14 times the weight of water.

The uses of mercury are various; it was once largely employed in the healing art, but its poisonous and active properties make physicians now most cautious in its use. Its weight and fluidity at common temperatures adapt it excellently for the construction of thermometers and barometers. Mercury is indispensable in extracting from their ores the precious metals, with which it forms alloys called amalgams. A mercurial amalgam of tin forms the so-called "silvering" of mirrors.

Other Useful Minerals

Next to the metals, the mineral substance most indispensable to man is coal, or mineral fuel. Strictly speaking this is a vegetable substance, fossil wood, the growth of the Carboniferous period, afterward converted by pressure and partial decay into Bituminous or soft coal. This retains much hydrogen in addition to its carbon, and burns like wood with a bright, smoky flame. Bituminous coal is abundantly distributed in many regions, but in a few regions it has been subjected to more powerful pressure, and to the internal heat of the earth, and has thus lost its hydrogen, and has become anthracite, or hard coal, which is nearly pure carbon.

Coal

This burns like charcoal with very little flame or smoke; makes a cleaner fire and yields more intense heat. The chief supply of anthracite is in Eastern Pennsylvania. Lignite, or brown coal is softer, has less carbon and more earthy matter. Still more powerful pressure has converted coal into graphite, or black lead, which is too hard to burn and is used in the manufacture of lead pencils.

INTERLAKEN, SWITZERLAND.

A fuel called Peat, is formed by the decomposition of vegetable matter in bogs, and is much lighter than coal. Peat seems almost to be a connecting link between the mineral and vegetable kingdoms.

Petroleum and Gas

Petroleum is believed to have been distilled by heat from organic remains buried under strata deposited in the ancient oceans. This oil has remained confined in the interstices of the rocks, and when released by deep boring, it oozes out or is pumped to the surface, according to the amount of pressure that it is under. Another product of this distillation was natural gas, which like the petroleum is a hydrocarbon. Natural gas is used for fuel in heating houses and in cooking, and for power in factories. Many important products are obtained from petroleum, including lubricating oils, gasoline, naphtha, paraffin, vaseline, and the aniline dyeing materials.

Asphalt

Asphalt, a bituminous substance, is cut out in the practically pure state in a semi-soft condition, from lake-like deposits, which fill up about as fast as the material is extracted from them.

Building Stones

Among the building stones, by far the most durable is granite, a material practically imperishable. This most ancient of rocks has been formed by intense heat, whereas sandstone and many other building stones have been deposited by the action of the water. Granite is composed of varying proportions of quartz (silica), feldspar and mica, the first constituting about three-fourths of the whole. It is believed by geologists that granite was once completely fluid and not merely in a soft pasty condition. It is by no means, certain, however, that all granite is the primitive rock of the earth's crust. Some of it is undoubtedly of much later origin.

SHELTERS IN THE KIMBERLY DIAMOND MINES.
Typical of the Country's Barrenness.

Lime Carbonates

Limestone, marble and chalk are all carbonates of lime. Common limestone is of aqueous origin as shown by its stratification. Marble is metamorphic limestone; it has been altered by heat so as not to be completely melted. Thus the marks of stratification remain, but the mass in slowly recooling has become crystalline. Marble is far inferior in durability to granite, though usually preferred because of the beauty of its striped pattern and varied tints

Salt

Rock salt was doubtless deposited from ancient seas by evaporation. It is found in very ancient geological formations. It is often mined like coal, a shaft being dug down to the beds and galleries formed in the layers of salt, which presents a clear, white appearance in striking contrast to the gloom of its surroundings, or to the blackness of coal. Rock salt is mined in many parts of Europe; the best beds in the United States are in New York, Michigan, and Kansas.

Natural deposits of this mineral always require to be purified.

Sand

Sand, which has so many uses and from which that indispensable substance, glass, is made, is one of the common forms of silica or flint. Silica is the most abundant element in nature, next to oxygen. When sand is naturally cemented into hard rock, it is called sandstone, the commonest of all building stones.

Glass

Silica combines with many metallic bases to form silicates, of which one of the most useful is glass. Ordinary window glass is chiefly a silicate of sodium; bottle glass, of calcium and aluminum; flint glass, of potassium and lead. Other metallic substances are added in small proportion to color glass in various tints, and these with heat to give it irridescence. The ductility and malleability of glass are dependent upon severe and sudden changes in temperature.

Minerals of Organic Origin

Some mineral substances, such as coral, and the shells of mollusks are of organic origin. Chalk is one of these, being composed of myriads of tiny shells, as revealed by the microscope. Among the chief deposits are the chalk cliffs of England and France. All these various carbonates of lime, oyster and clam shells, chalk, limestone and refuse marble, are burned in lime kilns to obtain lime, which is useful in many arts as well as a fertilizer of land. Lime fresh from the kiln is called quicklime, but loses its active alkaline properties on exposure to air or water, and is said to be slacked.

Clay

Clay is a silicate of aluminum. It is usually found mixed with more or less sand, though the purest clay, called kaolin, is nearly free from sand. The finest porcelain is made from kaolin, while the less pure clays are made into terra-cotta ware, coarse pottery, earthenware, building bricks and tiles.

Gem Stones

These may be classified according to their mineral bases. Among the most precious are those which have aluminum for their base. The purest of these, the ruby and the sapphire, are usually found associated with the mineral Corundum, which is a pure aluminum, and the hardest substance known except the diamond. The emerald and beryl contain, in addition to Aluminum a much scarcer metal called Glucinum. Rubies and Emeralds are among the most costly gems known. The finest rubies come from Burma, and the best emeralds from Colombia. The finest of these stones are valued even above diamonds. Among the less precious gems are topaz, opal, amethyst, tourmaline, turquoise, garnet and agate. The finest specimens of topaz are found in Brazil and the Ural Mountains. Nearly every gem known has been found within the limits of the United States, but as a rule the specimens are smaller and less perfect than those brought from oriental countries.

Diamonds

All other gems yield in importance and value to the diamond, which contains no trace of alumina or other metallic base, but is pure crystallized carbon. Chemically, it is of the same composition as pure charcoal, or graphite, and is supposed to have slowly crystalized under intense heat and enormous pressure. It is the hardest substance known and yet the only gem that is combustible. When burned in oxygen it yields pure carbon dioxide. It excels all known substances in its refractive power on light, and to this property is due its brilliant flash of prismatic hues. Diamonds are rated by the carat which weighs a trifle over 3 grains. Small diamonds are thus rated, but larger ones are valued much above their proportionate weight. Of two stones weighing exactly the same, one may be valued at ten or twenty times the other, if the former is greatly superior in the qualities most sought after, freedom from flaw, brilliancy, color and shape of cut. Diamonds are cut into various shapes, by a slow and tedious process in which diamond dust is employed because no other substance is of sufficient hardness. The most costly diamonds are colorless like pure water, but they are found of various hues, blue, green, yellow, orange, rose color, brown and even black. Among the earlier sources of supply were the so-called Golconda mines of India and the mines of Borneo, but these have been far out-classed by the Kimberley diamond fields, which are situated in the northern part of Cape Colony about 600 miles from Cape Town. The companies controlling these mines employ 10,000 native workers, and their wages there paid amounts to nearly $6,000,000 a year. In spite of the utmost vigilance there is a heavy percentage of loss on account of the thefts practiced by the diggers. The most successful method of hiding this plunder is by swallowing. A 60-carat diamond was found a few years since in the intestines of a native who had suddenly died in a suspicious manner. The total yield of the South African diamond fields, from their first working about the year 1870 to the present time, has been not much short of a billion dollars.

Kimberly Mines

Pearls

Among precious gems pearls remain to be mentioned. When a foreign particle has lodged within the shell of an oyster or mussel, the owner in an effort to dislodge it deposits layers of nacre in the spot and this builds up a pearl around the nucleus. As in the case of diamonds, the value increases beyond the proportion of size. The common river mussels of the United States have furnished valuable pearls, but such fortunate finds are extremely rare. The most productive pearl fisheries are those of the East Indies, where the divers employed to obtain them, have reached the greatest degree of hardihood and skill.

The Bahama Islands have also furnished some profitable pearl fisheries, the sponge-divers of those islands having at times added considerably to their wealth by such finds. The Pearl Islands in the Bay of Panama are so named because of profitable fisheries of this sort. In oriental waters it is the custom for the divers to go into the water naked and unprotected, save for a dirk clinched in the right hand. In American waters, however, because of the danger from sharks and the fierce *barracouta*, a fish of size and flesh-eating habits, diving suits or diving bells are usually resorted to. Black pearls, commonest in the Bengal waters, are of greatest value because of their rarity and the fact that they are not so frequently found in perfect condition.

PHYSIOGRAPHY OF THE UNITED STATES.

It is well at this point to insert a resume of subjects thus far treated of, as they are to be observed in our own country in their most characteristic manifestations.

Rise of the Continent

When the continent of North America first began to be reclaimed from the universal ocean, islands appeared here and there. By the combined effect of the protrusion of melted rocks from below and of lateral pressure in cooling, continental masses were gradually uplifted. The parts earliest raised above the sea were the land surrounding Hudson Bay, the narrow strip of the Apalachian chain and the foundations of the Rocky Mountains and Sierra Nevada. Between and around these islands sedementary deposits were made by marine currents and by the action of the first rivers. As the land slowly rose above the sea the Apalachian system continued to rise and to form cross chains and valleys by lateral folding. The land around the Great Lakes and the St. Lawrence River slowly rose, as did the northern part of the Mississippi Valley. The South Atlantic and the Gulf States still remained under water. In the far West a broad strip appeared from Alaska to Mexico, leaving a narrow slope along the Pacific still submerged and a shallow sea extending from Texas northwards to the Mackenzie River. In the great central plain, where Kansas and Nebraska now stand, was a great freshwater lake, with smaller ones west of it. In and around these lakes lived huge mammals, different from any species now known, yet related to them in structure. The mighty *ichthyosaurs, dinosaurs,* and their congeners, animals strangely reminding us of both birds and lizards of this day, were then denizens of that region.

PALM HUMMOCK, FLORIDA.
Typical of the Florida Coastal Belt.

Topography

Four great belts of relief mark the surface of our country, namely: 1. The Atlantic Slope and Gulf Plain. 2. The Apalachian Highlands. 3. The Valley of the Mississippi and great Central Plain. 4. The Rocky Mountain Plateau and the Pacific Slope, with the great Interior Basin between.

Atlantic Slope

The Atlantic Slope extends from northern Maine to southern Florida and its breadth from the Atlantic coast back to the Apalachian Plateau varies from 100 to 200 miles. From about New York City southward it is a belt of low sandy pine barrens, interspersed with swamps, backed by a gently rolling and rising plain of pine and oak lands of considerable fertility and maintaining a dense population. Nearer the coast the light soil adapts it to the culture of garden vegetables, berries, peaches, and the small fruits in general. South of Virginia the pine trees yield useful timber and the turpentine products. The short rivers flow from the Piedmont Region or foot hills of the Blue Ridge and are generally navigable for light draft vessels as far back as the first hills. The New England coast belt is higher and more broken in surface. The Atlantic Coast has many good harbors, especially in its southern half. The coast of New England is exceedingly indented. South of New York the harbors are fewer and a long sandy reef extends, with many breaks, along the entire coast to the southern point of Florida. This is the product of the ocean waves depositing sand, as they always do, when they reach shallow water. The principal inlets are the bays of New York, Delaware and Chesapeake, as well as Long Island Sound and Massachusetts, Cape Cod and Narragansett Bays.

The Gulf Plain

From Cape Sable, at the southern point of the Florida mainland, around to the mouth of the Rio Grande, on the Mexican frontier, the land is low and sandy with a few deep bays and many shallow bayous. The Louisiana coast is marshy and full of bayous, while sandy reefs extend along much of the coast of Texas, inclosing long shallow lagoons.

St. Lawrence Basin

As the St. Lawrence River discharges its water into a gulf opening directly into the Atlantic, it seems appropriate to place the basin of that river and the Great Lakes as a part of the Atlantic slope. The five Great Lakes are all connected by rivers, and, where obstructions exist, by canals, so that it is possible and commercially usual for vessels of considerable size to navigate from the head of Lake Superior or the south end of Lake Michigan—from Duluth or Chicago—to the ocean, a distance of 2,000 miles. As these five mighty sheets of fresh water, all except Lake Michigan, belong partly to Canada, the lower course of the St. Lawrence entirely in that Dominion, they have already been described under North America.

TENNESSEE MARBLE QUARRY, NEAR KNOXVILLE.
MOUNTAINS.

Great Lakes

The rivers of northern New York, of Michigan, Wisconsin and Minnesota, which flow into the St. Lawrence Basin, are all comparatively short because the Height of Land, or watershed lies near the lakes. In some cases, as at Chicago, this watershed is not more than two or three miles from the lake shore.

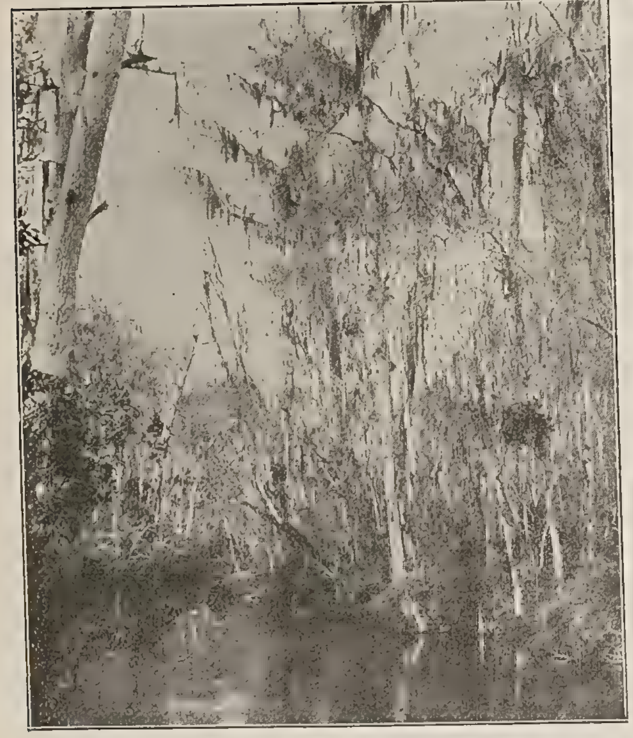
A LOUISIANA BAYOU.

Apalachian Plateau

The Apalachian Plateau is a very ancient formation. It extends from near the St. Lawrence River to Northern Alabama. It is very narrow at its northern extremity, but greatly widens southward. Its principal features in the far north are the elevations of Northern Maine, culminating in Mt. Katahdin, the White Mountains of New Hampshire, the Green Mountains of Vermont, the Berkshires of Massachusetts, and the Adirondacks and Catskills of New York. The White Mountains and the Adirondacks are grand and rugged in outline, and Mt. Washington, in the former range, is 6,279 feet high. South of New York State the Apalachian System divides into parallel ranges known as the Blue Mountains and the Alleghanies with midribs and spurs bearing local names. In Virginia the Blue Mountains become known as the Blue Ridge, and thus are known throughout their course in the Southern States. In Kentucky a western range is added, known as the Cumberland Plateau, lower than the Blue Ridge and the Alleghanies. In Western North Carolina the Apalachian System is more broken by shorter cross spurs, connecting the two ranges last named, and in one of these cross ranges, known as the Black Mountains, stands Mt. Mitchell, already described as the culminating peak of the Apalachian System, 6,711 feet in altitude. Clingman's Dome, in the Alleghany Range on the state line between North Carolina and Tennessee, locally known as the Unaka or Great Smoky Mountains, is only a few feet lower, and many peaks around these two are over 6,000 feet high.

Apalachian Valleys

The shrinking and wrinkling of the earth's crust as it cooled and contracted formed not only high ridges and peaks, but many valleys also, of which the largest is the great valley of East Tennessee, between the Alleghanies and the Cumberlands. Virginia and West Virginia also have many beautiful and fertile valleys. It is proposed that the general government should purchase and set apart a large forest reservation among the mountains of Western North Carolina as a National Park, partly to save or husband the noble forests of that section from the unthinking destruction of the timber hunter, and partly to conserve the headwaters of the many rivers there taking their rise, and thus preventing those disastrous floods characteristic of all denuded mountain regions. In Northwestern South Carolina, Northern Georgia and Alabama the Blue Ridge gradually lowers to foothills, and to the west the Cumberland Plateau gradually merges into the same, all finally being lost in the gently rolling lowlands. The chief river gaps in this system are the Delaware Water Gap, the Potomac at Harper's Ferry, and a few still deeper ones along the state line between Tennessee and North Carolina, where the Tennessee, French Broad and other rivers have cut their way through the mountain wall.



A BAYOU IN THE MISSISSIPPI DELTA.

The Blue Ridge being the oldest range of the system, sends rivers in both directions, some southeast into the Atlantic, others northwest into the Mississippi, and thence finally into the Gulf of Mexico.

Iron and Coal

Iron, the most useful of metals, abounds in this mountain system, especially in the states of Pennsylvania, Tennessee and Alabama, where coal and limestone are also near at hand. Though the quality of the ore is not quite the finest, it is a fact that iron and steel, especially for structural purposes, can be more cheaply produced in the three states named than anywhere else in the world.

Mississippi Basin

The immense tract known as the Valley of the Mississippi, which includes the Great Central Plain of the United States, because that Plain is almost entirely watered by tributaries of the Mississippi, is the largest river system of the world, except the far less important one, from civilization's point of view, of the Amazons. A small part of this great valley is drained by southern rivers that flow into the Gulf of Mexico and into the Rio Grande, and a much smaller area in the extreme north is drained by the Red River, whose waters eventually flow into Hudson Bay. The Missouri has many branches, chief among which may be named the Yellowstone, the Platte, and the Kansas. The branches of the Mississippi further south are the Red River and the mighty Arkansas, only second to the Missouri itself. Most of these great tributaries of the Mississippi have their sources in mountains, the Ohio and its southern branches rising in the Apalachians and the great western branches in the Rockies. Near the banks of the great central river itself the surface is mostly level and the northern part is largely covered with prairies. Further south are vast stretches of cotton lands and sugar plantations, while corn, the great American cereal, grows everywhere. In Missouri and Arkansas are the low Ozark Mountains, more properly hills.

The Missouri

The Mississippi Runs Up Hill

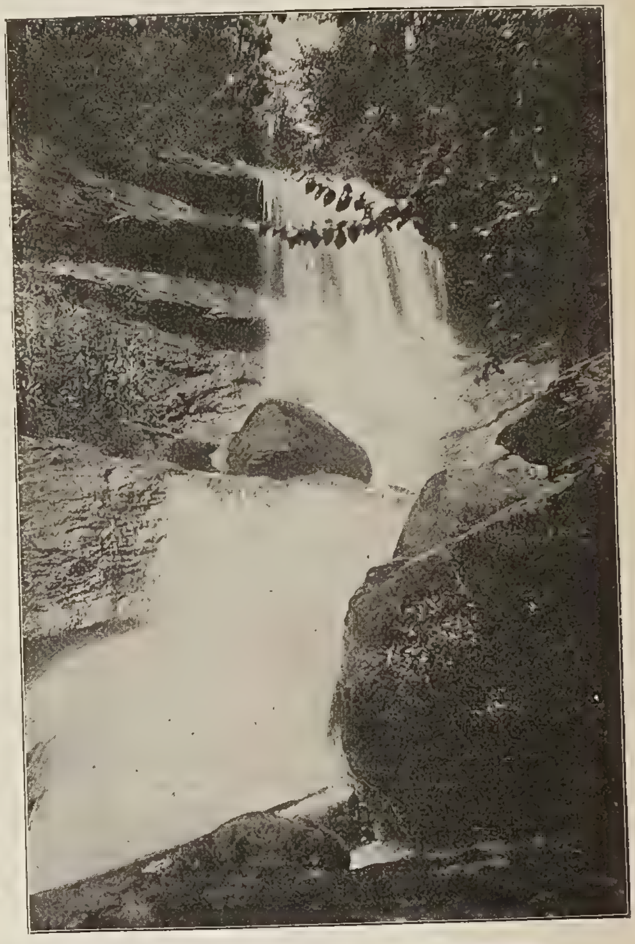
It is a remarkable fact that the mouth of the Mississippi River is further from the center of the earth than its source, and thus it is strictly true that its current flows up hill. This is explained by the fact that the centrifugal force increases toward the Equator, and that, if the motion of the earth on its axis should be arrested, the equatorial waters would flow toward the poles piling them up to the depth of 13 miles above their present level, with a corresponding depression at the equator. The current of the great river winding through a level country in its southern part is consequently very sluggish and flows through a broad bed of clay and sand which it has brought down from the upper ranges of the Missouri. In fact the surface of the water in this lower course is slightly above the alluvial bottoms on both sides of it, and when the river is flooded by rains it overflows the country and spreads out like a lake many miles wide. Long levees have been built and in times of danger they are patrolled by watchers night and day, intent upon checking the slightest leak. Notwithstanding all precautions these embankments sometimes give way, causing widespread destruction. The western part of the Mississippi Valley is occupied by the Great Plains, which gradually rise toward the eastern base of the Rocky Mountains, averaging in width six hundred miles and extending from the Canadian to the Mexican boundary. There are few or no forests in this great expanse. In its northern portion are the rich wheat lands of the Dakotas and further south immense areas given over to cattle raising. West of the Great Plains is the Rocky Mountain Plateau, covering the greatest portion of what are now known as the Western States. The general direction of the ranges in this vast mountain system is north and south, though the Uinta Mountains in Utah are an exception, running east and west. West of this plateau is another, which in Idaho, Washington and Oregon is known as the Columbia Plateau, in Nevada and Utah as the Great Basin and in Arizona as the Colorado Plateau. The most remarkable of these sections is the central one, the Great Basin, a low plateau which is traversed by many parallel ranges running north and south. The rivers in this basin have no outlet in the ocean, but either flow into lakes where their water is evaporated or sink into their dry beds. This basin is the nearest approach to a true desert to be found in the United States. In parts of it not a tree or even a shrub is to be seen for many miles and the surface of the ground is covered by the white, glittering alkali. In other spaces the only signs of growth are the cactus and the sage brush. A few tracts in this basin are below the level of the ocean. The most remarkable of these depressions is Death Valley at the southern end, sunk about one hundred and sixty feet below the sea level and named thus because of its extreme heat, dry, deadening atmosphere, and the total absence of water.

The Levees.

Great Plains

Rocky Mountain Plateau

The Great Basin



HIGHLANDS FALLS, NORTH CAROLINA.

The Great Western Peaks

The higher peaks of the Rocky Mountain Plateau, proper, within the limits of the United States are more than double the height of any in the Apalachian Plateau, but they are surpassed by few in the ranges which lie west of the Great Basin. The latter form one continuous lofty ridge known in California as the Sierra Nevada and further north as the Cascade Range. The latter stretch is in reality a line of extinct volcanoes. It was long thought that Pike's Peak was the greatest elevation in the United States, and, where this view was seen to be in error, that peak was still, and until quite recently, believed to be the highest point in the true Rocky Mountain chain. The following table, which gives the United States official altitudes, shows that Pike's Peak is exceeded by at least twenty-eight greater elevations in the United States and by fully eighteen of its immediate neighbors in Colorado.

HIGHEST MOUNTAINS IN THE UNITED STATES.

Mt. Whitney, Cal.	14,502	Mt. Rainier, Wash.	14,363	Glacier Mts., Colo.	14,243
Mt. Williamson, Cal.	14,500	Laplata Peak, Wash.	14,343	Mt. Shavans, Colo.	14,239
Midway Mtn., Colo.	14,484	Torrey Peak, Wash.	14,336	Crestone Peak, Colo.	14,233
Fisherman's Peak, Cal.	14,448	Mt. Lincoln, Wash.	14,297	Mt. Princeton, Colo.	14,196
Massive Mtn., Colo.	14,424	Uncompahgre Peak, Colo.	14,289	Mt. Yale, Colo.	14,187
Elbert Peak, Colo.	14,421	North Palisade, Cal.	14,282	Holy Cross Mts., Colo.	14,170
Blanca Peak, Colo.	14,390	Longs Peak, Colo.	14,271	Mt. Sneffels, Colo.	14,158
Mt. Tyndall. Cal.	14,386	Quandary Peak, Colo.	14,266	Split Mtn., Cal.	14,146
Mt. Shasta, Cal	14,380	Mt. Wilson, Colo.	14,250	Pike's Peak, Colo.	14,108
Mt. Harvard, Colo.	14,375	Mt. Antero, Colo.	14,245		

From this table it will be seen that the highest two points in the United States are in the Sierra Nevada of California, the next highest in Colorado, and that five Californian and five Coloradian peaks take precedence of Mt. Rainier in Washington, for some time thought to be the crowning point of the country. While the Rocky Mountain system is spread out over a much larger area, the Sierra Nevada quite holds its own in the average of its elevations.

Pacific Valleys

Still west of the Cascade Range is the Coast Range of Oregon and California, a much lower formation lying quite close to the ocean. Its highest peak, over 8,000 feet, is in Oregon. Between these two systems—the Cascade and Coast Ranges—lies one of the most beautiful and fertile valleys in the world, the valley of the Sacramento and the San Joaquin rivers in California and the scarcely less favored valley of the Willamette in Oregon. It was gold that was at first regarded as California's principal source of great wealth, but it was soon found that the wonderful crops of wheat and fruit yielded by its great central valley constitute a still richer treasure. Oregon and Washington in the corresponding valleys have equally great natural resources. In these sections where abundance of rainfall is assured enormous crops of grain, hay and fruit are produced. In the Willamette valley grapes, apples and pears are grown in great quantity, while in the Sacramento valley are groves of peaches, plums and oranges of unsurpassed yield. But, on account of the lack of rain, large areas of the Pacific States are entirely dependent on irrigation for the results which have made them famous. This system has reclaimed vast tracts of arid land and has made the wilderness to blossom as the rose.

Results of Irrigation

The country around Los Angeles in Southern California, for example, has become one of the great fruit and flower gardens of the world. Here are raised, in addition to the fruits just named, rich stores of apricots, olives, figs, walnuts and almonds. Irrigation entails considerable expense, but this is well invested in bringing treasures of vegetation from land that was once little more than a worthless desert.

Rivers of the Pacific Slope

The Colorado, the Sacramento and the Columbia are the chief rivers that empty their waters into the Pacific Ocean. The Sacramento, the San Joaquin and the Willamette have already been named as watering the rich valleys between the Sierra Nevada and the Coast Ranges. The Columbia rises in the Rocky Mountains very close to the sources of the Missouri, and after an exceedingly tortuous course, flowing in turn toward every point of the compass and receiving many tributaries, finally forms a large part of the boundary between Oregon and Washington and comes to rest in the Pacific. Immense deposits of lava abound in this section, and its decay, by erosion, has produced a very fertile soil. There is an exceedingly heavy rainfall near the coast, but the air parts with its vapor as it passes over the mountains and on their eastern side irrigation becomes necessary.

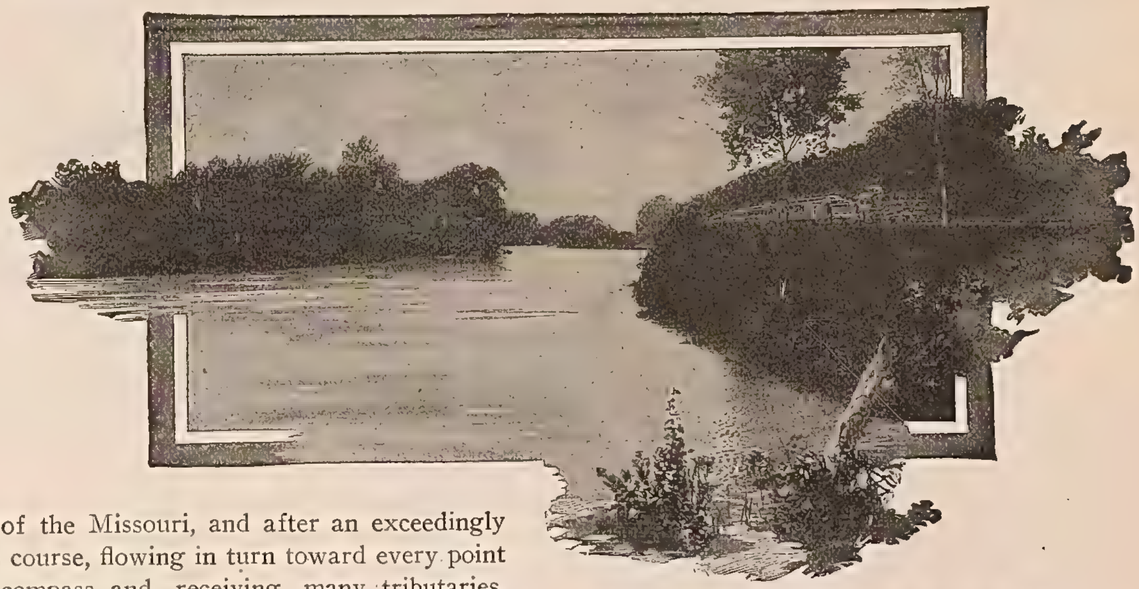
Grand Canyon

The Colorado River, having its headwaters in Wyoming and Colorado and flowing into the Pacific by way of the Gulf of California, has one unique feature of surpassing interest—the Grand Canyon of the Colorado in Northwestern Arizona. The channel worn in the earth by the river is at the deepest place nearly one and one-third miles deep. The observer looking down from this great height can not realize that a stream which looks so insignificant could have worn so deep a channel; nor does the eye at that distance detect the swift, deep, turbulent and resistless current that seems but a mere silver thread winding its way through the wonderfully variegated earths and rocks of the chasm. The walls on each side are a succession of enormous steps carved out by the stream in the course of the ages.

Mineral Wealth

Those states lying east of the Pacific States abound in wealth of metals. Silver and gold are found in them all, also copper, lead, and some mercury. Hydraulic mining is now largely resorted to. Quartz mining is also required in certain localities.

Lumbering is another mammoth industry of this western region, especially in California and Washington, carried on in so wholesale and often wasteful a style that the National Government has been forced to step in to regulate forest depletion and the denudation of great watersheds, an action taken not one whit too soon.



THE IOWA RIVER, NEAR TAMA, IOWA.

Climate of the Pacific Slope

The climate of the Pacific Coast also differs widely from that of other sections of the United States. Warm westerly winds influenced by the North Pacific Current bring the mean annual temperature on the Pacific Coast much farther north than in corresponding latitudes along the Atlantic. The climatic conditions, the averages of temperature and annual and seasonal deposition of rainfall, are probably more varied in the United States than in any other country of one government extending over contiguous territory. It is this fact, perhaps more than another, that insures that diversity and wealth of agricultural production which is the great safeguard and assurance of continued development so characteristic of our land. It is hard to conceive that, in so vast a territory, with so varied a climate, any very great proportion can be influenced by adverse crop conditions at one time.

Extremes of Elevation.

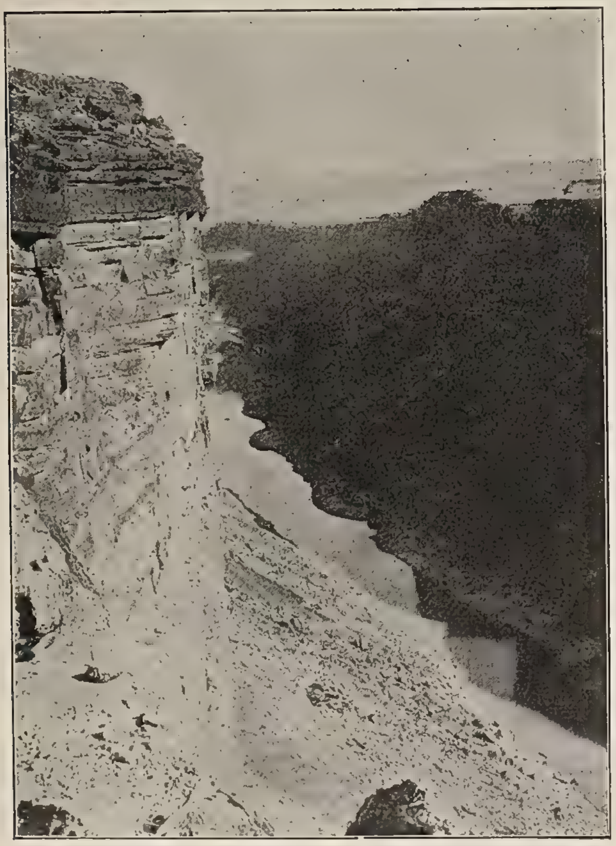
The United States Geological Survey has recently completed a line of spirit levels through Death Valley, California, and much to the surprise of every one familiar with the region has ascertained that the depth of that area is not so great as was supposed. The final computations of the results have not yet been made, but the preliminary figures give for the lowest point a depth of 276 feet below sea level. Bennetts Well, which is near this point, is 266 feet below sea level. These figures may be altered by two or three feet when the final computations are made, but they are probably not more than three feet in error. The Geo-

MT. SHASTA, CALIFORNIA.

logical Survey now has elevation marks on the highest and lowest points of dry land in the United States. It is a strange coincidence that these two extremes are both in southern California and only seventy miles apart. Mount Whitney is a foot or two over 14,500 feet above sea level, while Death Valley, as above stated, is 276 feet below. Before the Salton Sink, also in southern California, was flooded by the Colorado River, it contained the lowest point of dry land in the United States, a spot 287 feet below sea level. Previous estimates of the depth of Death Valley based on barometer readings gave for the lowest point figures varying from 250 to 450 feet below sea level. The level line of the Geological Survey is believed to be the first accurate determination of elevations in that locality that has ever been made.

The United States Dependencies.

Alaska was in point of time the first addition made to the United States entirely from the outside. It covers a very extensive area, more than **Alaska.** twice that of Texas, and is by far our largest territory. Few realize just how extensive it is; not only in area, but in the great reach of latitude and longitude over which it extends. The Arctic Circle passes through the north center of Alaska, and the southern part of the Territory, which extends down to the 55th parallel, is naturally much the most habitable part. The warm winds from the ocean and the inflow of the Japan Current greatly modify the climate in this section. There are many snow covered mountains in the southern part and especially along the southeastern coasts and in the Aleutian Peninsula and Islands. Of these somewhat inland, Mt. McKinley, nearly four miles high, is the loftiest thus far measured in North America. The south coast has many deep inlets affording excellent harbors; a steamer trip through the winding and ramified fiords between the islands which compose the southern arm of the country is one never to be forgotten because of its unique grandeur.



THE GRAND CANYON OF THE COLORADO.

The fishing and fur sealing of Alaska are among its richest resources. The seals resort to the Pribilof Islands, near the center of the Bering Sea, in the breeding season, and the males are killed for their skins. The ordinary fisheries have not yet become very profitable, owing to their distance from markets of any size. The same may be said of lumbering and to some extent of mining, both of which promise rich returns in the near future. An exception to the latter statement, however, must be made as to gold and copper. These with coal abound; but thus far gold has been the only metal mined in such large quantities as to attract much outside attention. There is a paying gold region not far north of Sitka, but, until very recent years, the fame of the Klondike Region, near and along the Yukon River, across the line in Canada has dwarfed the equally rich deposits of Alaska. Great fortunes have been made in the Klondike, and Dawson City has become almost a cosmopolitan center. The regions centering north of Norton Sound, on the west coast, commonly covered by the generic name of the Cape Nome Region, have now come into public view as among the most valuable gold fields in the world. Alaska has become a source of large wealth to the American Union; its future seems to have well nigh unlimited bounds in productivity. Its fur-bearing animals have many times repaid the original cost of the Territory to the Union; among these the White Fox, the Black Fox, the Beaver, the Mink, the Land Otter, and the Marten are the principal.

BIG TREES OF CALIFORNIA.
A Fallen Monarch.

The cost of Alaska, first called "Seward's Folly," in derision of the Secretary of State whose diplomacy and farsightedness added it to the Union, was $7,200,000. The revenue which the Government has derived from it since its purchase, as last reported, amounts to over $10,300,000, and the value of the products brought from it to the United States is now twice as much every year as its total cost. Thus far the totals of value are roughly estimated as follows: $68,000,000 in precious metals, $55,000,000 in the fisheries, chiefly salmon, and nearly $52,000,000 in furs, chiefly of the seal. At this writing, the prospects of new gold and copper productions from the mines of the Territory are very bright and seem certain to place it in the front rank of the gold-producing regions of the world. One mine within the Territory has for several years past paid its owners a profit of nearly $6,000 a day and bids fair to continue this yield for many years to come.

The agricultural possibilities of Alaska, at first thought, would seem to be a quite negligible quantity, but recent research and experimentation have shown this to be a very mistaken impression. Corn, potatoes and some other principal field or garden crops are grown to very good effect in the neighborhood of Sitka and a region where mosquitoes swarm forth in clouds like smoke from under the snow crust, when it is broken in the late spring, has a germinative energy that promises much more than is usually thought of it.

Products of the United States.

Much has already been said about the iron of the Apalachian Region and the gold of the far West. Something may be added in reference to **Coal** other mineral treasures. The precious gems found within our limits are of comparatively trifling value. The important metals and minerals, next to gold and iron, are silver, copper, lead, zinc, coal, petroleum and salt. Of these coal stands first in value of production, ranking about with the iron and averaging yearly not far from $200,000,000. The purest and most valuable coal in the world is the anthracite of Eastern Pennsylvania. Bituminous coal is somewhat less esteemed as fuel, but is far more widely diffused, being found in twenty-nine states, with Pennsylvania at their head. The total area of the coal basins of the United States is fully 250,000 square miles, which is about one-twelfth part of the country's entire area, exclusive of Alaska. This fact places our country in the front rank of the coal-producing countries of the world and second only to great Britain. A large part of the area **Iron** named is still undeveloped. The fact that iron is so cheaply and abundantly produced in Pennsylvania and Alabama is apt to make us lose sight of the fact that two-thirds of the total production of the country is in the Lake region of Michigan and Minnesota. In iron and steel the United States leads the world; **Gold, Silver and Copper** Great Britain standing second. Our country is also the largest silver producer in the world, Colorado being at the head. In gold, California long stood first, but Colorado has displaced it in recent years. Nevada, as previously pointed out, is rapidly forging to the front as a producer of precious metals. Copper, now come to be in such demand in the mechanic arts, especially in the electrical trades, is found in very paying quantities in several large fields, those of Montana and the Lake Superior region of Northern Michigan being chief among them. No great fortunes built up from mineral wealth have accumulated more rapidly or marvelously than have those recently piled up from the profits due to copper mining.

Lead, Zinc, Etc. Lead comes chiefly from Colorado and Utah; Zinc from Missouri; Mercury from California. Petroleum and its related gas—Natural Gas—are located in underground cavities; their probable origin has already been discussed under the general treatment of minerals.

Vegetation The forests of the United States are among the most varied and richest of the world. It has been truly said by a famed botanist that a greater number of species of trees may be seen in ascending a single mountain in North Carolina than in a journey of many days through Central Europe. It is believed that a trip of twenty-five miles from the foothills around Asheville to the top of Mt. Mitchell would introduce the close observer to a greater variety of vegetation than would be met with in a trip from Paris to Constantinople. The oaks of the United States number not less than fifty species. In the southern and southeastern sections are found the long-leaved pines, palmetto, cypress, magnolia and live-oak; in the Northeastern and Central States oaks, pines, chestnuts, maples, tulip, poplars; in the Rocky Mountain Region and on the Pacific Slope, chiefly pines, spruces, redwoods and oaks. The *Sequoia gigantea*, the Big Tree of California, is the monarch of the world's forests, attaining a height of over three hundred feet and its record being disputed in respect of bulk only by the Big Gums of Australia and in point of height by the firs of Northwestern Canada. The king of the eastern forest regions is the noble White Pine, not only in size, but in general utility. It disputes with the cocoanut tree and the bamboo plant the record of almost universal lumber uses, though far inferior to them in their other remarkable qualities. Maine and Michigan now furnish the chief remaining forests of this mammoth tree, once so abundant in Pennsylvania. The long-leaved or Georgia pine stands next in general esteem and still abounds in the pine barrens from Southern Virginia southward along the Atlantic coast through Florida and all along the coast of the Gulf of Mexico to Northeastern Texas. The Bald Cypress has almost the same range as the tree last named, but grows in swamps instead of in dry barrens. In these great southern swamps the Black Gum is the leading growth, but the tulip-poplar, the ash and the maple, also abound.

PORCUPINE CREEK, SKAGWAY TRAIL, ALASKA.

A SEAL ROOKERY, PRIBILOF ISLANDS, BERING SEA.

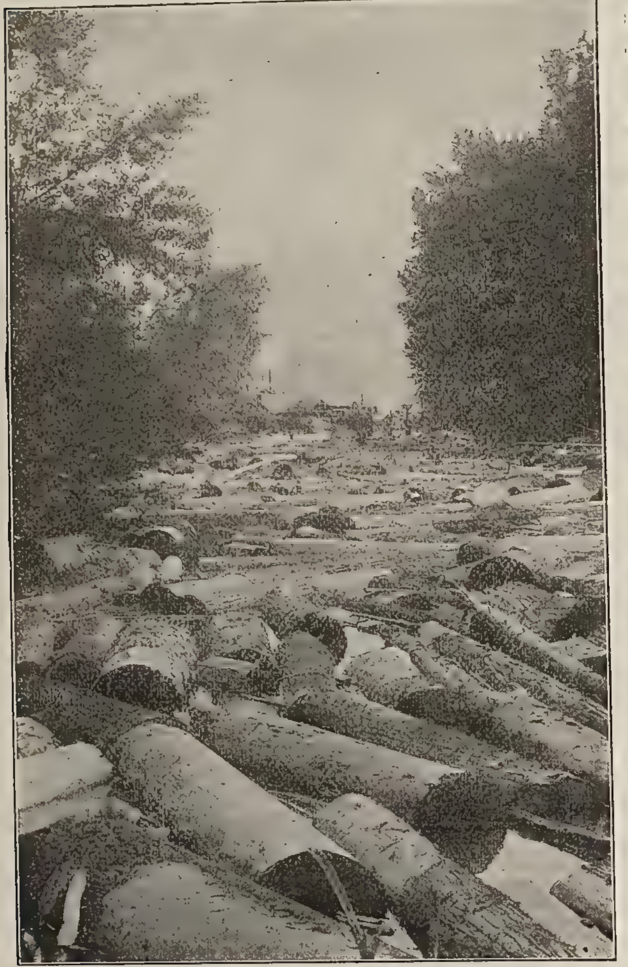
Forest Waste The forests of the Rocky Mountain Region, proper, are not remarkable for their extent and value, being chiefly composed of insignificant conifers; but when we come to the Sierra Nevada and Cascade Ranges we find forest growths of far greater importance. Besides the Big Trees and the Redwood, closely related to it, there is the valuable and widely distributed Douglass Fir, which is also seen in the Rocky Mountains. These are alluded to above; and in addition to them are the Western Yellow Pine and some others of less note. A national lumber association recently in session accepted the committee report that from the best estimates possible to be had "there now stood in the United States approximately 1,475,000,000,000 feet of lumber, but that 45,000,000,000 feet were being cut every year." At this rate our forests would last nearly thirty-three years, at which time the production of commercial lumber must cease altogether. But there are several other contingencies which must be considered in such calculations. The annual fires in forests destroy an incredible quantity of standing timber, including all the younger growths which have been started and the seed as well, and seed trees from which future forests must be produced. Including the consumption of wood for pulp and paper, lumber cut for export and for domestic use, telegraph poles, cross ties, piling and fuel, of which much is still used in many locations, the timber used in mining operations and that destroyed by forest fires, there are seventy-five billion feet of timber consumed each year, with an increased quantity yearly. It is evident, therefore, that we have not enough timber standing to continue commercially for more than twenty years in all the United States, including the Pacific Coast forests.

Mammals About the time of our Revolutionary War and for some time afterwards the American Buffalo, more properly called the Bison, ranged in great herds east of the Mississippi river as far east as Western Pennsylvania. In Kentucky they seemed innumerable. By the year 1832 all had been driven west of the great river, but vast herds of them continued to range the great central plain and frequently impeded the progress not only of wagon trains of the emigrants, but even of the earlier transcontinental railway trains. The Indians had not been able to reduce their numbers, though they killed many to supply themselves with meat, clothing and shelter. But the improved weapons of the white man made rapid havoc among them and at the beginning of the twentieth century only a very few were left in the national parks and zoological gardens. No herd, nor even small drove of them in the entirely unprotected wild state has existed for fully two decades. The two largest members of the deer family, the Moose and the Elk, are rapidly following the fate of the buffalo. The former are still seen in considerable numbers in the pine forests of Canada and the northern United States, but the elk is becoming a very rare find. The Virginia deer is found in all parts of the United States, but the Mule-deer and the Black-tailed species are only found near the Rocky Mountains. Though most abundant near the Arctic Circle, the Reindeer sometimes ventures as far south as Northern Maine, Montana and Idaho.

The Carnivorous Animals The largest and most formidable of the carnivorous animals of the United States is the Grizzly Bear. This terrible beast usually passes man by with utter indifference and hatred until he has felt the sting of the bullet in his hide, after which he knows him as an enemy and is even fearless in attack. The Grizzly, now become a rare animal, is found mainly in the fastnesses of the Rockies. The Black or Brown Bear is still common eastward and is said to be holding its own in the Apalachian Mountains, in the southern reaches of which it is often a menace to the smaller live stock of the mountaineer.

The Cougar, variously known as Puma, Panther and Mountain or California Lion, is the largest of our American Cats, unless we except the tropical

Jaguar, which has occasionally been killed north of the Rio Grande border. The Jaguar is a brave and ferocious beast, yet it is slow to attack man. In common with all the great cats it much prefers escape into the quiet and seclusion of the jungle to the hazard of a battle with man. The writer has had the rather unique experience of driving a full-grown Jaguar before him along a jungle path on the Orinoco with no weapons in his possession save a butterfly collecting net, the unusual sight of the waving net being quite sufficient to overcome any tendency toward curiosity or combat the powerful creature might have felt. The Panther is a born coward, notwithstanding its great size. In some sections the Indians made friends of the Panthers and let them come and go freely among them. They had no domestic animals to be preyed upon by the panther. The smaller wild cats are the two species of *Lynx Rufus,* the Red Lynx, and *Lynx Canadensis,* the Canadian Lynx, the latter being confined to the northern ranges and being larger and fiercer.



A LOG JAM, COEUR D' ALENE RIVER, IDAHO.

Among other carniverous animals, valuable for their fur, may be named the Wolves, Foxes, the Otter, Mink, Marten, and Weasels. The first two are abundant everywhere, but the valuable fur bearers among them belong to the northern range of states and on toward the Arctic Circle. All of these genera, however, are rare now in comparison with their wonderful numbers less than a century ago. The great call for furs for wearing apparel has slowly driven them back to the wilderness, and even there their numbers are greatly reduced.

Fur Bearers

The most valuable of the fur bearers are the members of the seal tribe. The species known as the Sea Elephant frequents the coast of California, but is now being rapidly exterminated. In Alaska the true Fur Seals abound and supply the largest part of the world's demand. Walruses and Sea-Lions are also more or less frequent inhabitants of the North Pacific Ocean along the upper United States shores.

The Rodents of the United States include the Hares, Rabbits, Squirrels, Beavers, Marmots and Field-mice, all more or less abundant. The Marsupials or Pouched Animals, very abundant in geological eras, are now represented in the United States only by the Opossum. Raccoons are purely an American animal; an interesting species is the Raccoon-Fox of California to Texas. Bats are abundant everywhere, although for the most part only the smaller species are found.

On the coast of Florida is seen one of our most remarkable mammals, the Manatee or Sea-Cow, which lives in shallow water, has paddles instead of forelegs and no hind-legs at all. It occasionally grows to a length of ten feet. Another and much larger Sea-Cow once lived on Baring Island, but the last one is believed to have been killed nearly one and a half centuries ago.

Modern Saurians

Beside the Mammals the gigantic Saurians of our South Atlantic and Gulf States deserve passing notice as very important vertebrates. The Alligator frequents the bayous of those states, but is fast disappearing before the hunter, who finds its hide of ready sale. It is stated on good authority that the crocodile of South and Central America has been seen in South Florida. It is an interesting question as to how it has found its way there, whether around the long line of the Gulf coast or by swimming in a more direct line across from Yucatan, perhaps making Cuba a safe stopping place. The crocodile differs from the alligator in having its toes more fully webbed, its hind legs fringed and its teeth more visible when the jaws are closed. Both animals are of about equal length when full grown, the maximum being about eighteen feet in the United States, though they exceed that measurement by fully fifty per cent in South America.

Birds of the United States

Prominent and most familiar of birds are the smaller species which surround us everywhere. The Thrush family includes the Robin, those sweet singers, the Wood Thrush and Hermit Thrush, and above all, that wonderful mimic and unrivaled musician, the Southern Mockingbird. Two of the most interesting of the birds that come to us from the tropics are the brilliant Scarlet Tanager and the ruby-throated Hummingbird, the latter the only one of its family seen east of the Mississippi Valley. In the Rocky Mountains and westward to the Pacific a few other species of these tiny summer visitants are found. The Wrens, Larks, Nighthawks, Woodpeckers, Warblers and Flycatchers are all familiar and mostly of numerous species. But the largest family of all is the Finch family, which includes the sparrows and other related seed-eaters. The most interesting of the Nighthawk family is the Whippoorwill, with its weird cry in the twilight, so suggestive of its name.

FALLS AND FERNS ON THE GUADALUPE RIVER, IN TEXAS.

The Woodpeckers are for the most part a group of showy and noisy birds, the largest of which is the Ivorybill, now almost extinct in the southern hills, where once it was common. The same is true of the Wild Pigeon, which as late as 1870 was still quite abundant in some parts of the country.

Birds of Prey

At the head of the Birds of Prey stands the Bald Eagle, the emblem of American Liberty. This honored bird measures more than five feet from tip to tip of its extended wings and three feet from bill to end of tail. It is long-lived, and after the third year the feathers of the head and tail become white, giving the head the appearance of baldness as it soars aloft. The Golden Eagle is of about the same size and has nearly the same range; both prefer mountainous and bleak regions and both are of most lofty and magnificent flight. Of the Owls the two largest are the Great Horned and the Snowy; the Grey Owl is larger, but very seldom appears south of the Canadian boundary. The Snowy Owl is common far north, while the Great Horned Owl is much more common southward. The smallest of the Hawks is the handsome and active little Sparrow Hawk, while one of the largest species is the Fish-Hawk, which is often robbed of its prey by the piratical Bald Eagle. The great American representative of the Vulture tribe is the Turkey Buzzard, so called, though not a true buzzard. Its range is from the Atlantic to the Pacific and from the Gulf to southern New York. The Carrion Crow, the "John Crow" of the West Indies, is a smaller vulture common in the South and sometimes struggling northward. Both are eminently useful, especially in warm climates, in disposing of decaying flesh, which otherwise would be a serious menace to health.

Game Birds

The largest and decidedly the most notable of the gallinaceous birds is the Wild Turkey. Known as the Turkey in English because it was believed to hail from the Ottoman Empire, it is the "Calcutta hen" to the Teutonic peoples; North America, south of the 40th parallel, however, was undoubtedly its true home. The tame turkey hen sometimes steals her nest, especially when raised on farms in the Southern Mountains, and her young brood remains with their wild congeners in the woods. The wild turkey, once so abundant everywhere, is now practically extinct in New England, but it is still often shot or trapped in the Southern Apalachians, also in the wilder parts of Florida and Texas. Its flesh is unrivaled in toothsome flavor.

Other favorite game birds are the Ruffed Grouse or Pheasant, as known in the East, the Prairie Hen of the Middle West, and the Quail or Bob White found in nearly all sections. Among the waders the Cranes, Herons, Snipes, Plover, and the gamy Woodcock are conspicuous. The Flamingo of the far south of Florida is the largest and most brightly colored of this group. No less sought after are the swimmers, which include the Wild Geese, Ducks, Gulls, Petrels, Divers, Loons and Auks. Of the latter the Great Auk is now entirely extinct and a thing of the past. Recently a single egg of this extinct bird has sold, at auction in London, for about $1,200.

PLANT LIFE: ITS GEOGRAPHICAL RANGE.

In the higher examples of organic life it is very easy to distinguish between vegetables and animals, but the most simply organized forms of both kingdoms approach each other very closely. Plants live chiefly on mineral substances and transform them into food for animals. Plants in sunlight inhale carbonic acid and exhale oxygen; animals reverse this process.

Sub-Kingdoms of Plants

All systems of classification of organized bodies are more or less imperfect on account of the incompleteness of our knowledge. The latest arrangement divides plants into five sub-kingdoms. Beginning with the highest and best known, the first of these groups bears the name Phanerogams. This sub-kingdom includes, as its name implies, all the true flowering plants, whether herbs, shrubs or trees. The organs upon which the growth of the plant itself depends are the root, stem and leaves; those which provide for the continuance of the species are the flower, fruit and seed. In rare instances some of these parts may be wanting, but as a rule all are present.

A FERN FOREST, TASMANIA.

Phanerogams

The root is always buried in the soil except in the parasitic plants, which spring entirely from other growths. The roots of trees or shrubs are woody, but they always send out slender fibers which absorb nourishment from the soil. The roots of herbs are either fleshy, as in the beet, or fibrous as in the grasses. The stem is often nearly absent, and the leaves seem to spring directly from the root. In trees and shrubs the stem is always present and of a woody texture. Some stems remain under ground and are called rhizomes, or root-stocks. The tuber, the potato for example, is a sort of under ground stem. While the roots are drawing up moisture and mineral matter from the soil, the leaves are inhaling carbon dioxide from the air to supply the plant with needed carbon and are exhaling superfluous oxygen and watery vapor. These processes take place through the tiny pores, on the under side of the leaves, which are so numerous that over 100,000 have been counted in a square inch. The leaves, being so important to the growth of the plant, are very rarely absent.

The Flower

The flower, when complete, has four parts, two of which are mere envelopes, called the calyx and corolla; the calyx is often absent. The other two parts are essential to the production of seed; these are the stamens and pistils. The stamen has a stock or filament bearing the anther, which contains a quantity of tiny grains known as the pollen. The pistil is in three parts, the stigma, the style, and the ovary. When the pollen grains falling on the stigma burst, they discharge a fluid which passes down through the style and fertilizes the seed in the ovary. Insects, especially bees, often carry the pollen from the anthers of one plant to the stigmas of another of the same species and thus aid in the production of seed. When the seeds are thus fertilized the ovary expands and the fruit grows around it.

Gymnosperms

An important exception to this description of the pistil is seen in the class called Gymnosperms, in which the stigma, style and ovary are entirely wanting, and the seed, as the name implies, is exposed to the air at the base of a scale. This class includes the cone-bearing order, to which Pines, Spruces and Cedars belong.

Angiosperms Exogens and Endogens

The class Angiosperms, in which the seed is enclosed in an ovary, is divided into two sub-classes, the Exogens and Endogens. In the Exogens the stem grows by additions to its surface each year, and the leaves are not veined, as in the fruit trees of temperate climes. In the Endogens the stem expands by growth from within and the leaves are mostly parallel-veined, as in the palms and the grasses. In the former a new layer of wood is formed each year, so that when a tree is cut down, by counting the rings of growth in the stump, a nearly correct idea can be formed of the age of the tree. In this way the great ages of specimens of the California Sequoia and the Australian Eucalyptus have been approximately ascertained.

Cryptogamous Plants

The remaining four sub-kingdoms are cryptogamous, bearing no flowers, and producing no true seeds, but increasing by spores, through a complicated process, which can hardly be described in this brief survey of the subject. The highest of these four groups includes the ferns, clubmosses and scouring rushes, a comparatively small but interesting group. The ferns mostly bear their spores on the back, or under surface of the leaves or fronds, and are of graceful and attractive forms. In tropical regions they grow to the size of large trees, resembling the palms in general appearance.

A GIANT BANYAN TREE, INDIA.
This single tree is said to be of such size as to shelter 2,000 persons under its shade.

Bryophytes

The third sub-kingdom, the Bryophytes, comprises the true mosses and liverworts. Mosses bear stems and tiny leaves, and their spores are contained in receptacles somewhat resembling the seed pods of certain higher orders of plants.

Thallophytes.

The Thallophytes are composed of cellular tissue only and have no distinct stems, leaves or roots. They include the mushrooms and toadstools, the lichens, the sea-weeds and fresh-water algae. The spores are not borne in separate receptacles.

Protophytes

Lastly, come the Protophytes, the lowest order of plants, mostly microscopic and multiplying by division of cells. Small and imperfect as these are, they fill an important place in nature, for they include the bacteria, the bacilli and micrococci, some of which are said to be pathogenic, or disease producing, while others are believed to promote the health and welfare of the higher forms of life, including man. They comprise the ferments which foster the decay of organic matter, also the yeasts which cause fermentation, such as that which raises bread.

A PINEAPPLE PLANTATION, LOWER FLORIDA.

Zones of Plant Life

As plants differ in the amount of heat and light required for their growth, three great zones of vegetable life exist, the tropical, the temperate, and the polar; these are often subdivided. It has been stated in the chapters on climate that as we ascend a high mountain near the equator we pass through different zones of plant life. Near the base are the palms and tree-ferns; midway between base and summit, are oaks and chestnuts; farther up toward the snow line, only low shrubs, hardy grasses, lichens and mosses. Many plants thrive only where almost daily exposed to the rays of the sun, while others seek the shade. Some are fitted to endure severe cold, while others perish under the slightest approach to frost. Some delight in moisture and grow best even when immersed in water, while others, such as the sage brush and cactus groups, keep fresh and green in the driest situations. Many trees, shrubs and herbs have originated on certain continents, and have never appeared on any others until introduced by man.

Tropical Growths

The leading trees of the Tropical Zones are the Palms of several important species, among which the Cocoa-palm takes the leading place in value to man. From the leaves, baskets, matting, cloth and sails are woven; from the fibers of the bark ropes are twisted, the trunk furnishes lumber and the nut shells convenient utensils. The kernals supply wholesome food, and their milk a pleasant, cooling and most nutritious drink and, when pressed, yield oil for lamps and a not unacceptable substitute for butter. The date-palm is of almost equal value to the people of North Africa. Various tropical trees supply delicious fruits, as the orange and lemon group, the bread-fruit tree, the mango and the durian; others furnish lumber for ornamental furniture, such as mahogany, rosewood, Santa Maria wood, ebony, cocobolo, and satin wood. Among the products of plants of lower growth are the bananas, manioc or cassava (the tapioca plant) pineapples, coffee, and cane sugar, and various plants yielding spices. The tropics abound in orchids, all curious and beautiful, only one of which is useful, the vanilla plant; the wealth of interest that this group adds to our northern hothouses is too well known to call for more than mention. Here, too, are the giant water lilies, the Victoria Regia, with flowers two feet in diameter, and leaves seven and one-half feet across, capable of floating with a well-grown boy upon one of them. The growth in a jungle or tropical wilderness is luxuriant, far beyond anything we see in the densest thickets of the temperate zone. Tall climbing plants, vegetable ropes, swift-growing vines and grasses are tangled in inextricable confusion, and make passage almost impossible. Bamboos are known that have added over three feet in height in one day; parasitic climbers of morning-glory like appearance grow seven or eight feet over night; and the transformation of a dried swamp, of the hot season, to a waving wilderness of rushes, reeds and grasses, after a few days of rain, is as near magical as anything within the realm of nature.

Magical Growth

The bamboo is one of the most useful plants of the tropics and grows almost as freely in the subtropical zones. Every part of this plant is utilized by man; its buds are edible and nutritious, strips from it are exported to temperate regions for chairmaking; the smaller growths yield fishing poles and furniture stock; joints of it make excellent watertight vessels and it often grows to such a size that its trunk, split open, makes excellent canoes, even reaching a size of fourteen inches in diameter.

Vegetation in the Temperate Zones

The Temperate Zones, each extending over more than 40 degrees of latitude, naturally produce a great variety of plant-life. In the regions nearest to the tropics are the sugar cane, cotton, rice and tea. A little farther from the tropics such products as the fig, olive, grape and peach appear. Still advancing toward the poles, we find the fruits of the colder temperate belt, the apple, pear, cherry. Now appear the evergreen conifers, the pines, firs and cedars, while wheat, rye, barley and buckwheat flourish. Indian corn has a wider range, and grows in hotter countries than wheat, though not so far north. The trees of still colder sections are the willows, birches and hardy conifers. In the polar circles are found a few hardy grasses, lichens, willows and Icelandic mosses.

The useful plants may be divided into 5 groups, as follows:

Useful Plants

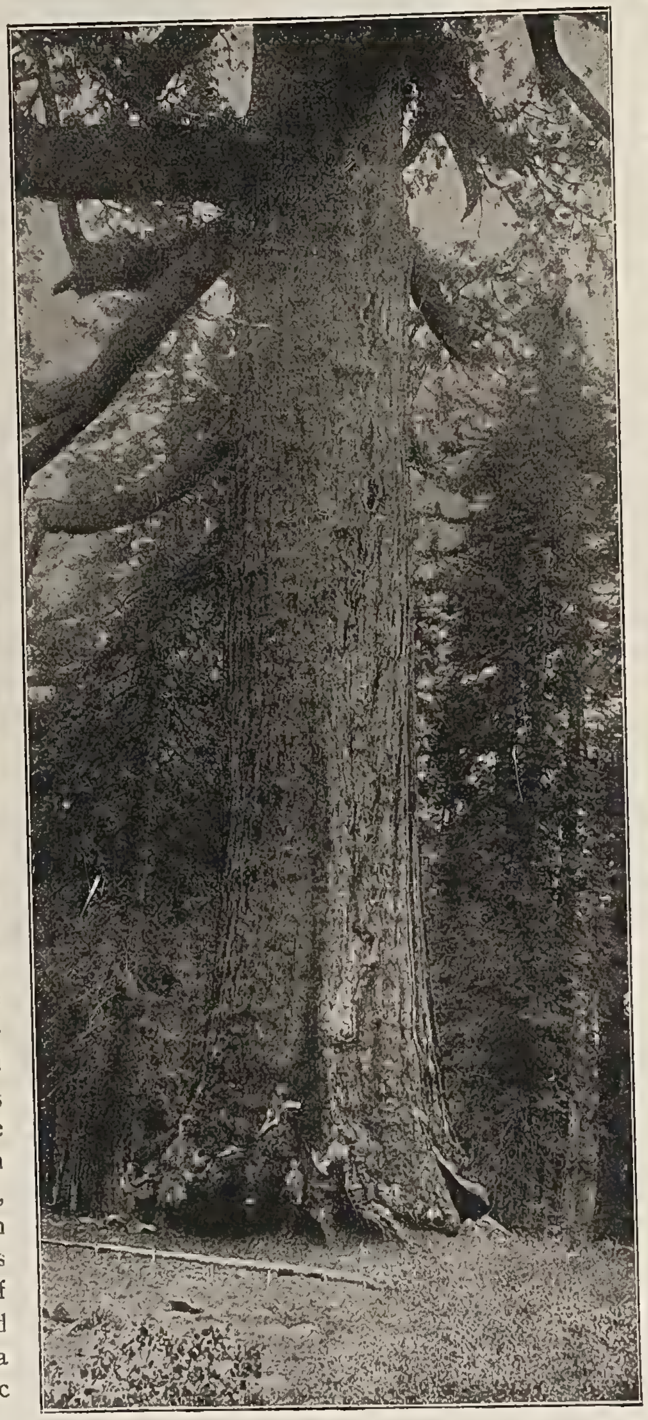
1. Plants yielding foods and drinks. 2. Fiber plants. 3. Plants yielding medicines, spices and narcotics. 4. Plants yielding dyes, oils and gums. 5. Timber trees.

By far the most valuable of food products are obtained from the cereal plants—the members of the grass family whose seeds yield the great staple crops, and furnish to man the staff of life. First of these in importance ranks wheat, which grows only in the temperate zones. Fully one-fourth of the world's wheat crop is raised in the United States, amounting in abundant years to more than 600,000,000 bushels.

While wheat gives daily bread to civilized man, rice performs the same office for the still more numerous half civilized tribes. In parts of India and China it is gradually giving way to wheat; but it still forms the staple food of one-half of the world's inhabitants. It is less nutritious than wheat, but its light and wholesome quality makes it the safest food for dwellers in warm and hot climates.

Maize, or Indian corn, stands next in importance among the world's staple crops, being the chief bread stuff of the lower classes of our southern states, and still very popular with all classes in the Western world.

Rye is largely raised in some sections as a substitute for wheat, but it is less nutritious and wholesome. Barley is much used for bread in Russia, as it matures well in cold climates. Oats are largely prepared for breakfast food, being very strengthening and wholesome for those with robust digestion.



"THE GRIZZLY GIANT," MARIPOSA GROVE, CALIFORNIA.

One of the Largest of the Sequoias.

Grasses

One of the most important crops throughout the temperate zones is obtained from the grasses, both as pasture for cattle, sheep and horses, and for drying in the form of hay for the winter food of stock. The hay crop of the United States is very large, and thus grass is largely converted into milk, butter, beef and mutton.

Root Crops

In tropical countries the yam, a large root, furnishes food to a large number. Cassava and tapioca are prepared from the roots of the manioc. The two potatoes—white and sweet—are tubers attached to underground branches; both originated in South America. The white potato is one of the most important crops of the United States. Other leading crops are the onion, turnip and beet. The sugar beet is largely raised in Germany and elsewhere for the production of sugar, and wide areas are constantly being devoted to it in California and other states of the American Union. Careful selection has greatly increased the proportion of sugar in the juice.

Fiber Plants

Fiber plants furnish thread for spinning, weaving, rope making, etc. The chief tropical plant of this class is Jute, from whose stems is obtained a fiber that is woven into coarse fabrics such as mats, canvas and ropes. The flax plant is an herb from whose bark a fiber is prepared that is woven into linen a textile fabric that ranks next in importance to cotton and woolen goods.

Hemp is obtained from a plant related to the nettles. The fiber is very strong and makes the best ropes and cordage. The fiber of cotton, the most valuable plant of its class, and by far the most widely cultivated, is in the long hairs attached to the ripe seed in the bursting pod.

Medicinal Plants

Medicinal plants are very numerous. Many which were once esteemed for their healing powers have been dropped from Materia Medica. One of the most valuable is digitalis or fox-glove which has a remarkable tonic influence on the heart. Coca, a shrub growing on the Andes Mountains, is a basis of cocaine, and is largely used as a nerve stimulant. Another South American product is the bark of the Cinchona tree, which yields quinine. The seeds of the poppy furnish opium and morphine; the nux vomica yields strychnia. Tobacco may be named here as a narcotic so extensively used that its culture and curing employ many thousands of the human race and millions of capital. Among the most valuable products of tropical regions are the spice-plants, pepper, black and red cloves, cinnamon, nutmegs, allspice, and others. No plants producing gums employ as much capital and labor as those whose juice yield caoutchouc or India-rubber. This important product was at first obtained from one or two kinds of trees growing in the valley of the Amazons River, but now the milky juice of other trees and of smaller plants is found to thicken into serviceable rubber.

Gums and Oils

Gum-arabic is obtained from acacia trees growing in Asia and Africa. Certain gums and resins used in the manufacture of varnishes are the products of fossil trees. The most important resin, known as *Rosin,* is the product of the southern pine trees. Tar, pitch and turpentine are other products of the resinous pines. Vegetable oils are mostly derived from seeds, such as cotton seed, flax-seed and the castor oil bean. Olive oil is obtained from the fruit of the olive tree.

Dyes

The dyes formerly obtained from trees and smaller plants are now largely replaced by the brighter and cheaper coloring matters made from aniline, obtained from benzol, a product of coal tar. When aniline is acted on by certain chemicals it yields the brilliant dyes referred to.

Forestry

The United States and civilized countries have suffered more or less from the wanton destruction of their forests. When a region has been laid bare by cutting away its forests, and rains are no longer absorbed and kept back in the spongy soil about the roots of thousands of trees, but run swiftly over the bare earth, cutting unsightly gullies and washing away the soil, the water that remains on the ground, no longer sheltered by the protecting canopy of trees, rapidly evaporates. Protracted droughts, alternating with heavy rains, and devastating floods are the results. Springs and brooks dry up, violent winds are no longer checked by the forest barrier. Public attention has been drawn of late to the increasing evils, and several states of the Union as well as the General Government are moving toward reform in this direction. "Arbor Days" have been appointed and movements have been started to set apart forest reservations. The science of systematic Forestry is still in its infancy, but is steadily gaining recruits.

Causes of Forest Depletion

Paper Industry

It would naturally seem that, as the population of the earth has not increased very largely within the past 100 years and that as pestilence and warfare have maintained the balance with the natural increase by birth, the forests of the earth should have been able to provide by their natural growth for the wants of man, as well as they did in the earlier ages. This hasty view, however, does not take into consideration the fact that the wants, or imaginary necessities, of mankind have increased in far greater ratio than his numbers. To mention only such special calls upon the timber supply as pulp and paper, furniture, increased architectural needs, interior decorations, and the enormous requirements of railways, is enough at once to explain how vastly the call for timber and its products have multiplied within the past three-quarters of a century. We naturally regard the railway as a product of iron but, as a matter of fact, when the constant repair of wooden bridges, string-pieces and ties is considered, the cost for iron in a railway roadbed in every decade is not nearly as great as that for wood. Ties alone probably now consume a greater amount of timber in this country than does the building trade, great as the latter is. The many efforts on the part of inventors to supersede the wooden railway tie by iron, vitrified glass, papier mache, or other substitute, have thus far not yielded desired or promising results. Any one conversant with the homes of 100 years ago, or even less, by illustration or reading, will recognize at once how vastly the requirements of interior decoration and furniture have called upon our timber supply. The artificial needs of the present day are such that the decorative problem alone is greater than that of necessities of but half a century ago. It is probable, however, that in the paper making industry, and in the manufacture of pulp for paper, we have done our forests the greatest injury. The nature of this industry is such that timber of all sorts and sizes can be consumed, and, as a consequence, many small growths that in but a few years would have been valuable for the larger uses have been cut off before their prime at an enormous loss to our forestry. It is to limit and control matters of this sort that the states and the nation are now so earnestly striving to establish forest reserves, water shed protection by forests, and a scientific conservation and maintenance of the balance of timber growth. This subject is alluded to still more fully in another portion of this work where the problem as affecting the United States alone is specially dealt with.

Improvements in Agriculture

The vastness of agricultural problems, when considered in the aggregate, is almost beyond comprehension. It far transcends all other departments of economic plant life. When account is taken of the fact that the production of wealth on farms in the United States alone, in the year last reported, reached the stupendous aggregate of $6,415,000,000, and that this represents an increase of $256,000,000 over the production of the year preceding, the importance of any one discovery affecting favorably the production of agricultural wealth is apparent. And this vast increase in productive capacity is due primarily to improved methods in farm practice. In the period covered by this increase, no considerable new areas were brought under cultivation, except where cultivation was made possible by investigations showing the possibility of reclaiming arid or semi-arid lands by irrigation or dry farming operations. Credit for this additional wealth-producing power must therefore be given mainly to the use of improved field crops, fruits, and animals; to better methods of cultivating, fertilizing, harvesting and marketing crops; to more rational practice in feeding and caring for farm animals, and to the more general and successful use of preventatives and remedies for diseases and insect pests of plants and animals. In the United States much credit for this is to be given the Agricultural Department's Office of Experiment Stations, a wide-awake and most efficient organization. If credit for one-hundredth part of the improvement in farm practice can be given to the influence exerted by that bureau, through the 6,400,000 publications distributed during the previous year, through correspondence with the hundreds of thousands of farmers, and through demonstrations and lectures reaching other hundreds of thousands, the total expense of maintaining these stations was paid nearly twice over.

THE AGAVE OR CENTURY PLANT, MEXICO.

This plant yields fiber and drink, as well as making impenetrable hedges.

Increase of Food Plants

A branch of the present topics, that, while it is of economic and commercial importance and, perhaps, equally entitled to consideration under the head of Commercial Geography, may well be somewhat amplified here, has to do with the improvement of vegetable growths for the food of mankind and the domestic animals and with the introduction of species from their natural habitats to distant regions, and the enhancement of their excellencies in new homes. The potato, an acrid, knurly and dwarf growth as a wild vine in South America, already alluded to, is a marked case in point. The once admired garden ornament, the "love apple" of our grandparents, now our much prized and greatly improved tomato, is another illustration. The introduction of the rice plant to our sea islands along the southern coast, where it has been brought to a degree of perfection not equaled elsewhere, the recent successful introduction of cotton into Togoland, Dahomey, and other of the Guinea Coast dependencies, and the introduction of tangerines, apricots, figs, pineapples, bananas, and other tropical fruits into our sub-tropical regions are all striking cases of this sort. The case of the fig is especially interesting, because with it there has had to be a zoological introduction, as well. As is well known, the fig does not reach its fruity perfection unless it undergoes a process known as "caprification," a cross-fertilization produced by a predatory insect. Hence, in this case, while the Bureau of Plant Industry of the United States Department of Agriculture was successfully coping with the introduction of the tree, the Division of Entomology, of the same Department, was perfecting the introduction and acclimatization of the caprifying insect.

Improvements

In its food capacities, the Vegetable World has greatly grown in importance in the last half century. This has largely come about by reason of two geographic factors. First, a more thorough and intimate knowledge of the physiography of our earth has opened our eyes to distant treasures of vegetation; while, secondly, improvements in that very important branch of Commercial Geography, transportation—fast freights and refrigeration—have brought to our doors for daily consumption, products but a few years ago regarded as almost unattainable luxuries. In the setting aside of the limitations placed on us by climate, this movement is especially noticeable. For example, let any one remember how, barely a decade ago, the March strawberry (hot house grown) was an almost priceless boon to the invalid or the very wealthy, while to-day the February berry from Texas is almost as cheap on the table in Chicago or New York as will be the local product of June.

In these ways and along these lines the more progressive countries, and especially the United States, long a leader in Economic Agriculture, bid fair within a comparatively short time to quite double the numbers of the species of the commonly useful members of the Vegetable Kingdom.

ANIMAL LIFE: ITS DISTRIBUTION AND MIGRATIONS.

The Backbone Family

Ascending in the scale of being we pass from the vegetable to the animal kingdom. To begin with the Vertebrates, the highest sub-kingdom, having a backbone and an internal skeleton, the latest zoological classification divides it into five classes: Mammals, Birds, Reptiles, Batrachians and Fishes, with a few intermediate forms or connecting links. The first three have true lungs; the others breathe by gills, or else are amphibious.

Mammals

Mammals, the highest and most perfectly organized class of the Vertebrates and therefore the highest class of animal life, bring forth their young alive and nourish them with milk. Their natural covering is hair. The array of sub-classes and orders of the mammals is as long and varied as it is interesting, extending as it does from man down through the apes, lemurs, dog and cat tribes, the grass-eating cattle, hares, squirrels, rodents, and the whole line of domestic creatures and most of those furnishing our supply of flesh-food.

Birds

Birds, the next class below the Mammals, are too well known to require description. They are set apart by the possession of that wonderful and fascinating faculty—aerial navigation—the power of flight. Their natural covering is of feathers, though downy hairs characterize some species. Birds, like Mammals, comprise a vast array of sub-classes, orders, families and genera, in a variety of forms and sizes, with the ostrich and the tiny humming bird at the extremes of size and the clumsy, flightless penguin and graceful, tireless condor as striking contrast in skill and power.

The Mammals and Birds supply man with a large part of his most useful products; his food, clothing and ornaments, including meats, wool, furs and leather.

Reptiles

The Reptiles comprise the lizards, turtles and serpents, all of which breathe by means of lungs. Their covering is mainly of scales or chitinous plates, fixed and coalesced in some and free and flexible in others. There is, perhaps, even a greater array of diverse forms in this class, the swift moving, slender whip-snakes and the ponderous and sluggish giant turtles of the Galapagos islands being as far apart as it is possible to conceive members of allied sub-classes to be.

Batrachians

The Batrachians include the toads, frogs, newts and salamanders. All of these pass through two stages of existence; in the earlier form they breathe by the aid of gills which enable them to extract the air contained in water, and in the higher stage they mostly breathe by means of lungs and live out of the water. The gill-breathing animals, including the fishes, die in water which has been deprived of its air by boiling or otherwise.

Fishes

The Fishes, including not only the true fishes, but some lower forms, such as the sharks and saw-fishes, all breathe by gills. Certain kinds are so largely used as food by mankind that measures have been taken to propagate them and to stock rivers and ponds with them.

Arthropods

Next below the Vertebrates stands the sub-kingdom Arthropods, which includes insects, spiders, scorpions, crabs, lobsters, and their like. This sub-kingdom is the most numerous of any, the insects alone probably outnumbering all other forms of animal life. It is this sub-kingdom which gives us most of the pests and parasites of our life; it contributes most of those forms of animal life which it is hardest for us to reconcile with a beneficent purpose in nature.

Mollusks

The sub-kingdom of Mollusks, the Shellfish, comprises oysters, clams and mussels, all of which have two shells and are known as bivalves; snails, slugs, etc., with one shell, if any, and the cuttlefish, octopus, etc. The most useful of these to man are the edible species of the bivalves, the oysters and clams especially supplying varieties of highly prized food. Over twenty millions of dollars are paid yearly for oysters alone in the United States.

Minor Sub-Kingdoms

Lowest Forms of Animal Life

Of the five remaining sub-kingdoms of the animal realm one includes star fishes, sea urchins, etc.; another, jelly fishes, coral polyps, etc.; and another the sponges. The lowest of all are the Protozoa (the lowest animal forms), many of which consist of mere unicellular structures. Some of these have the power to protrude parts of their body at will and some are able to open a mouth, if so it may be termed, at any portion of their structure and absorb their food through it. Some of these lowest forms bear shells. Among these Protozoa are the animalcules, or infusoria, which abound in stagnant water and form interesting objects for microscopic examination. The Amœba is a mass of jelly protoplasm which protrudes portions, in limb-like form, as above. There is no proper mouth, but the jelly-like substance opens up and then closes around its food and digests it. It reproduces by division, *i. e.*, by a species of budding, whereby the bud or subdivided portion is thrown off and soon becomes an animal like the parent mass.

Of the domestic animals which man has been able to carry with him to every corner of the known world, to the extremes of heat and cold, the most ubiquitous is the Dog. The horse cannot thrive in intensely cold regions, nor the reindeer in extreme heat. But the Dog can live everywhere with man.

Descent of the Horse

The collection at any large Zoological Garden of all the equine animals (whether zebras or wild asses) now found on the globe gives ample scope for conjecture as to how the horse as we know it was developed from this material. Perhaps it was not developed from them at all, but from a more horse-like animal than any of them which has disappeared from wild life, even as the original wild ox has disappeared from the forests of the west. But a survey of all domestic forms only leaves the impression more strongly that the original tribes first drew them from the wild species with which they were in contact. It is still done by the Lapps and the jungle tribes of Assam, and the process as it goes on today affords scope for conjectures as to what the "prehistoric farm" must have looked like.

It is the very natural tendency of early efforts at domestication in any form to be limited to the reclamation of a single species. This in itself is difficult enough. The ambition to possess a variety of domestic animals must be a much later idea. The Kaffirs only took to owning horses very gradually. They were content with their cows even as beasts of burden; and to this day the Lapp makes no effort to add to the primeval herd of reindeer either the ponies or the cattle which his Norse neighbors have maintained, in regions as hyperborean, ever since they migrated to the far north.

The reindeer herds of the Lapps, the Samoyeds and the East Siberian tribes continue to flourish without the slightest attempt to improve or alter the wild breed. In Assam the wild ox or gayal is regularly "taken up" from the jungle and domesticated. The wild cows are decoyed by balls of salt and treated with this luxury till they mingle with those which have been previously domesticated, and are gradually incorporated in the herds which are driven out into the jungle to feed and brought home to be milked.

In the case of the Indian buffalo and the Burmese elephant the tame and the wild species are also seen living in the same forests, and recent travel has discovered the wild snow-camel on the cold deserts over which the tame camels have for ages transported the goods of the far east to the markets of the west. The reindeer, elephant and snow-camel are specialized by nature for particular conditions, and as it is precisely for use in these conditions that they are maintained, no one would attempt to introduce differences.

It is not difficult, and is certainly interesting, to picture the early and ambitious would-be pastoralist considering which of the animals in his native wood or on the mountains near it would pay best to catch and how he was to tame them. In Europe, for instance, there were at least two large wild bovine animals, one a bison, the aurochs, the other a real wild bull—not a bison. Whoever the first cattle tamers were, they certainly decided to catch the latter, and had nothing to do with the bison, for they tamed the one and left the other severely alone.

Domestic Animals

It must have needed some courage to capture even the dreaded urus in the Hercynian or Calydonian forests; nor is it easy to conjecture how men able to keep in their possession herds of animals naturally so fierce and of which the male descendants are to this day the most dangerous and uncertain of any domesticated animal. The difficulty of retaining the reclaimed stock is greatly increased because all grazing animals, in the absence of inclosure, which is not universal even in civilized Europe, have to be led out to feed daily when they have every chance of resuming the wild state. But it is difficult to suppose that our cattle, or those of the east, were first obtained in any other way. But it is no evidence that a domestic species is not descended from a wild ancestor, if this ancestor is not now existing. We should have known nothing of the wild bull of Europe were it not for the record of books and bones, and should not have these if the breed, instead of existing down to historic times, had perished some four thousand years earlier, as they may well have done from the plains of India.

The Hog Tribe

Pigs were probably a European "reclamation." In the tropical east no one wanted them, for they were neither wholesome as flesh nor givers of milk. But in every case, in Europe and Asia, there is practically only one wild pig, except the babirussa, which may have been the origin of some of the Chinese breeds. In any case the enterprising domesticator of pigs in any form must be honored before the disciple of Confucius, who is credited with having discovered, merely by accident, their merits when roasted. We can quite understand how the resolve arose. What could be more natural to the tribesman of the village who already possessed a small and increasing herd of dairy animals reclaimed from the forest than to follow this up by catching, either in nets or pitfalls, a family of young wild swine, and adding them to their farm stock?

Sheep and Goats

If the east did not give us the pig, it probably gave to the world its flocks of sheep and goats. Asia is the true home of the domesticated goat. It is there that it flourishes and is held in honor. There, too, was the animal which by general consent is the original of the common domestic breed, the wild Pasenggoat, or ibex, of Asia Minor and Persia. There would not be the slightest difficulty in domesticating the young of several species of mountain sheep today, if this were desired. Difficult as the lambs are to catch, they are taken when very young on the mountains, and the only difference in their behavior is that though all become as tame as the proverbial "pet lamb," some species—notably the Barbary wild sheep and the Indian burrhel—become more markedly friendly than others. All wild goats and wild sheep alike have short, smooth coats, though the Barbary sheep grows a woolly mane; but there is under-wool in the fur of all wild sheep, which care in domestication would increase. It is tempting and easy to imagine "lost animals" from which our tame ones have sprung. But except in the case of the vanished European, and perhaps Asiatic wild cattle, there is no domesticated quadruped, from the rabbit and dog to the camel, whose origin may not be safely traced to a wild ancestor, now living, caught and tamed by personal enterprise and continued in man's service by transmission as property, of which this may have been one of the earliest forms.

Zones of Animal Life

Preceding the consideration of the vegetable kingdom the zones of plant life and plants useful to man were treated. In like manner sections on the zones of animal life and the animals useful to man may be presented here confining the subject mostly to Mammals and Birds, by far the most important and useful classes. The collection of animals naturally belonging to any region constitutes its fauna. The Quadrupeds (Mammals) and Birds of the Tropical Zone may be divided into three great geographical groups, the Fauna of Tropical America, of Africa, and that of Tropical Asia. Tropical America includes the northern part of South America, the West Indies, Central America and Mexico.

Animals of Tropical America

The native fauna of this region includes such mammals as the armadillos, ant-eaters and sloths, the agouti and cavy, the manatee, the peccary or wild hog, the jaguar, the spider-monkey and the howling monkey and numerous other monkeys, and the marmosets. The leading birds are the humming birds, the smallest of which is no larger than a bumble-bee, the bright colored parrots, various pigeons, the flamingo, the toucan, the wonderful bell-bird, the strangely colored sun and moon bird, the rhea or American ostrich, the great eagle and the condor, the largest of the vulture tribe, with an expanse of wing that sometimes reaches twelve feet.

Animals of Tropical Africa

The African belt comprises all of Africa south of the Barbary States. The mammalian fauna of this extensive region includes a vast array of quadrupeds. Prominent among them are the Cape and scaly ant-eaters, the coney, the hippopotamus, the African buffalo, the various species of zebra, giraffe and camel, the rhinoceros, the African elephant, the African lion and hyena, the baboon, chimpanzee and gorilla. The native birds include many adorned with brightly colored plumage, such as the flamingoes, starlings, parrots, the halcyons, the bee-eaters and sunbirds. Aquatic birds abound, also the South African crow and various doves. The bearded vulture, the bustard, the large secretary bird, which attacks and devours serpents, and the huge ostrich, which prefers open plains and deserts, are also characteristic. Eagles, hawks and other birds of prey are very numerous, and no less so the various pigeons, partridges, swallows and thrushes.

Tropical Asia

Tropical Asia comprises Arabia, Hindostan, Farther India, the Philippines, and the Islands of the Malaysan Archipelago. The prominent mammals are two species of deer, the wild zuba, the Indian rhinoceros, the Asiatic elephant, a distinct species from the African, the Bengal tiger and Asiatic lion, as well as the monkey-like lemurs, the gibbons and orangs. Among birds may be named the ostrich, probably of the same species as the African bird, wild peacocks and guinea-fowl, various parrots, cranes, hoopees, rock-pigeons, wild quails and partridges, ducks and geese. As many as eighty species of birds are found nowhere except on the Island of Celebes, and the same is true of forty species in Java. The jungle-fowl of Ceylon is distinct from that of India, and on that Island waders and swimmers abound.

The North Temperate Belt

The North Temperate Belt includes north temperate regions of both hemispheres of Eurasia, as well as North America. Its largest mammals are the bison, the buffalo, reindeer, elk and moose. The cougar, variously known as the puma, American panther, California or mountain lion, has a wider range than any other wild animal, being found from southern Canada to Patagonia, but nowhere in the Eastern hemisphere. In this belt also are found the fur bearing animals so valuable to man; the ermine, beaver, mink, sable and seal. The smaller mammals include rats and mice of various species, squirrels, hares and moles. Among the birds of this zone may be named eagles, hawks, owls, buzzards and other carrion birds; numerous species of swimmers and waders, the wild turkey, the various quails and grouse, the wood-cock and snipe, and innumerable species of smaller birds, warblers, flycatchers, thrushes and song birds, among which the European nightingale and the American Mocking bird hold the highest rank. Most of these tribes journey far every year, flying back and forth between the far north and the sub-tropics, in those mysterious migrations which the human eye can not follow nor human reason fully explain.

The Australian Fauna

The smallest of the continents, Australia, possesses a fauna widely distinct from every other; it takes in also New Guinea, Tasmania, New Zealand and the Polynesian Archipelago. In this interesting region are found such peculiar mammalian forms as the various kangaroos, the wombat and other pouched animals. Here, too, are the dingo or wild dog, the pouched dog, the bandicoot, the Tasmanian Devil, the duck-billed ornithorhynchus or platypus, the echidna and the Australian opossum. New Guinea has the phalangers and New Zealand the tree-bats. The birds of Australia are more numerous than the mammals yet there are fewer species than are found in the same latitudes of South America and Africa. They include the white eagle, the black swan, the emu, a running bird related to the ostrich, and no less than sixty species of parrots. It has been said of Australia that it is a continent whose flowers are without fragrance and its birds without song. This is too broad a generalization, yet it has some truth when compared with the larger continents.

In South Temperate America, which extends along the Equatorial Andes, the most interesting mammals are the Llama, the Chinchilla and the Spectacled Bear, while the most prominent birds include the Condor, the King Vulture and the Albatross.

Polar Animals

The Antarctic and Arctic zones are chiefly remarkable for their marine mammals, the enormous whales, the sea elephant and walrus, the largest of the seals. On land are the Polar Bear, the Arctic Fox and Hare, the useful Reindeer and the Musk-Ox, with a few species of birds, including the Snowy Owl, the Sea-Eagle, the Auks, the Eider Ducks and the Petrels.

THE ORIGIN AND DISTRIBUTION OF MAN.

Reasoning Man

But there is one family of the great Mammalian class that has penetrated to every land and has sailed on every sea—The Human Family—*Homo Sapiens*—the Reasoning Animals—have been enabled by this very faculty of reason, denied to every other, to find a home everywhere, to cross the pathless sea and the trackless desert, to descend into the lowest valley and to stand on every mountain height except a few where life is impossible, to dive into deep seas and to raise themselves miles above the earth. Not satisfied with moving over the land and water at rates of speed far surpassing any land or marine animal, man now aspires to rival the bird in navigating its chosen element. It is the reasoning faculty alone that distinguishes man from the mammals that stand below him in the scale of being. His skeleton differs but slightly from that of the gorilla or the orang-outang. His organs of respiration, circulation and digestion are identical with theirs. His food is practically the same as theirs—grain, fruit and meats. Yet there is a wider gulf found between the highest ape and the lowest savage than between the latter and the civilized man of highest intellect. It is probably true that an inferior power of reasoning is possessed by some of the lower animals, but it does not raise to abstract reasoning nor to faculty of generalization.

Man is the only animal that naturally walks erect; the only one that protects his person by clothing, that employs fire to cook his food, or has invented weapons of defence and offence, the only one that has devised language to express his thoughts, or that expresses pleasure by laughter, the only one whose attachment to his offspring survives the helpless stage of their existence.

Man's Adaptability

We have already spoken of the climate-conquering adaptability of man; it should be remembered that not only is he the only animal whose present range coincides with that of the habitable globe, and not only is he able to support life, at least for considerable periods of time wherever land exists, but this universal domain has been his since the earliest times.

The Period of Variation

In now approaching the subject of mans variation we also reach the most forceful and eloquent illustration of the great evolutionary formula that "all living things are the outcome of their environment." When it was conceived that man had gone through the Dispersion after the period of his later physical and mental development it was a difficult task to explain how "some fully specialized group, say, originally black, migrating from continent to continent, became white in one region, yellow in another, brown in a third, and so on." It was clear that such a group passing from its proper zone to another would have perished before it had had time to become acclimatized. But on the assumption believed to be well grounded on the testimony of geologic records that the Pleistocene groups, all at first similar and everywhere presenting the same prototype, gave rise to the present living varieties of man, developed independently, the difficulties of the plan disappear. Thus, whether regarding them as the varieties of Linneus or as separate species originally sprung from a parent stock, we can safely echo the words of Keane: "They are what climate, soil, diet, heredity and time have made them, and that is the reason why, in the case of all later migrations, the first question that arises is one of acclimatization. Illustrative of this is the ease with which British colonizers adapted themselves in Canada, the United States, New Zealand and the south of Australia, and their equally decided failure in the West and East Indies, Central Africa, and in all but the high mountainous regions of India."

MUMMY OF RAMESES; THE PHAROAH OF MOSES.
A Reminder of Early Historic Times.

Culture Zones

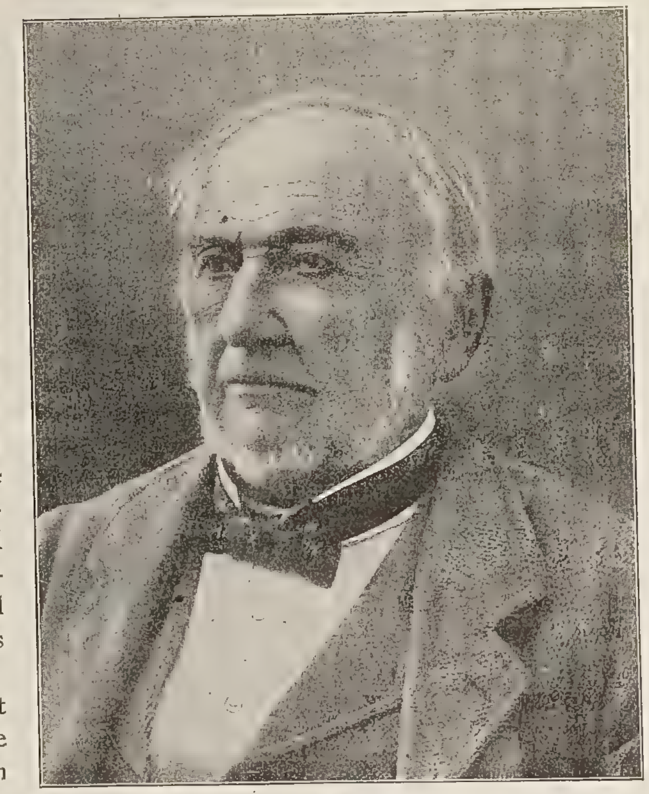
It is interesting in this connection to notice that this dispersal has not only followed lines of the least resistance but that along these lines have been those "Culture Zones," wherein man has attained and maintained his highest civilization. In the eastern hemisphere this zone, in a pre-eminent sense, is included between the parallels of 25° and 50° north latitude. "Within this privileged area, which, following the normal isothermal curves of continental and marine climates, is contracted in the east to 40° N. or less, and reaches in the extreme west to 55° N., have originated and flourished all the great centers of civilization in ancient and modern times—the Egyptian, Babylonian, Assyrian, Persian, Indian, Chinese, Ægean, Hellenic, Phœnician, Minæan, Sabæan, Etruscan, Roman, and later European. Within the same area have sprung up all the great religions of the world—the Jewish, Buddhist, Christian and Mohammedan; and there also developed all the higher orders of speech, that is, say, the three inflecting Hamitic." (l. c.) This fact is made all the more potent by the other, equally true, that in all other regions primitive man has been a laggard in the race for supremacy or in the development of his higher nature. In the south temperate lands—Central and South Africa, East Malaysia, New Guinea, Australia, Melanesia, Fuegia, or in the sub-tropical Asiatic peninsulas, the elevated, forbidding plateaux and sub-arctic steppes of both hemispheres in Central Arabia, Tibet, Mongolia, Siberia, or in the great prairies and tundras of the New World, the case is found ever the same. There mankind is far behind in all those things which go to make up that whole which we term civilization. It should be added before leaving this subject, however, that what has just been said is somewhat less true today than it was three or four centuries ago. Since then the broad outline of the cultural map above sketched has been somewhat modified by the "wanderlust" of man, by his colonizing fever, by the adaptive improvements of science that afford many means of thwarting the vigors of climate, and by the gold hunger which, having its inception with the Spanish *conquistadores*, has intensified with the added years.

Stages of Culture

The indispensable activities of life, such as hunting, fishing, tillage of the land and herding, and the industries associated with them, are the main determining factors in the progressive stages of human culture. These progressive stages, in the Prehistoric and the earliest Historic Ages, are recorded in stone and metal implements, that, everywhere of surprising progressive uniformity, act as milestones to mark mankind's advance from the most primitive to the highest plane of civilization. Flint is mainly the medium in which the record of these has been perpetuated; in the former and far

The Stone Ages

longer period the flint was flaked, chipped or otherwise shaped in the rudest fashion, while in the later age it was much more carefully shaped and polished. As it is now ascertained beyond the possibility of doubt that some of the very highly specialized races of man, such as the Iberians, Ligurians and Pelasgians, for example, were well established in Central and Western Europe in Neolithic times, it is plain that the Old Stone Age must have endured for such a period that the vast differentiations between the Man of Java, *Pithecanthropis erectis*, and *Home Europaeus* had been perfected. "Speaking generally, however," says Keane, "the latter was distinguished from the former by a more complete control over fire, by burial and funeral rites associated with more enlarged religious notions, by the cultivation of cereals and other alimentary plants, by the domestication of several animals, and by considerable progress in most of the useful arts and industries, especially pottery, weaving, architecture. Thus are connected remote past and present times by the imperishable work of early man, just as the two Stone Ages were connected by the kitchen middens and shell mounds which were common to both periods, and are still found fringing the 'beached margent of the sea' in so many lands—Denmark, Japan, Australia, North and South America."



HON. WILLIAM EWART GLADSTONE.
A Typical Anglo-Saxon Who Combined Brain and Brawn to a Remarkable Degree.

The Metal Ages

Following the Stone Ages, the Metal Ages—the Copper, Bronze and Iron Ages—followed in close order. But they can nowhere be successfully separated; overlappings are found everywhere. In almost every prehistoric mound or cave their products are to be found in such confusing jumbles that the dividing lines between them can no longer be indicated with certainty. These metals, as man mastered their natures and perfected himself in the arts of utilizing them, all became too interwoven with his everyday needs—as weapons of defense and the chase, utensils and adornments of that time fully attest—for them ever to disappear from among his important products, and as a consequence they have all persisted, to this very hour, when they are increasingly useful each decade.

Prehistoric Age

There now follows what is known as the Prehistoric Age, an epoch quite impossible of close definition, covering a very vague period of time. Of it, Historic times retain dim memories; of these, many popular myths, legends and folk-tales of demi-gods, eponymous heroes, and the like, are the remains. The "Age of the Five Emperors," in early Chinese records, when was instituted marriage and writing was invented, is the Oriental equal of our Prehistoric Age, just as their preceding "Age of the Three Rulers," our Stone Age, the age when men were cave or tree dwellers, obtained fire by friction, subsisted on the blood of animals and wild fruits and uncooked food, wore skin raiment, and threw their dead to beasts of prey. Such universal memories and folk-tales speak of the common background of abject savagery, from which all the modern cultures must originally have come by slow evolution.

HAVANA PEDDLERS.
African (Negro)-Spanish Admixture.

Historic Age

The Historic Age may be said to have been born with use of letters, invented in both Orient and Occident during the Prehistoric Age, if not earlier. First by mere pictographs, then by ideographs, phonetic symbols and syllabaries, and finally by alphabets, all human knowledge is preserved and perpetuated in a vast, ever accumulating whole. It seems unlikely that any other age can be beyond us in the future, as that would first require the blotting out of recorded thought by symbols, a species of beginning all over again quite inconceivable.

Civilized Man

Having reached the Historic Age we find it far easier to follow the recent steps that have produced the present highest evolutionary animal product, Civilized Man, as we term ourselves, whatever may be the verdict regarding us that coming ages may have to render. In the narrow sense, civilization is a very recent state that has yet visited, in a possessive way, a very small portion of the earth. His recent advance have made man more a creature of intellect, his mind developing rather at the expense of the body. By this it is not meant that human prowess and human endurance are less today than in earlier centuries, for it is quite likely that the term of life, the athlete's record, and the average of bodily well-being are greater today than ever before. Certain it is that the athletic Anglo-Saxon can out-travel, out-run, out-shoot, lives longer, and in general gets more out of the physical side of his life than does the man of any present day savage or semi-savage race.

THE AMERICAN INDIAN
A Chief of a Vanishing People

Classification of Man

Ethnographers, the students of the origin and development of the races of men, have differed widely in their classifications. The length of prehistoric periods and the amalgamation of races have surrounded the study with impenetrable mystery. No better arrangement has yet been devised than a division into three great types which may best be defined by colors, namely, the White, the Yellow and the Black types of mankind, otherwise called the Caucasian, the Mongolian and the Negro.

The White Type

This is the ruling type of mankind; yet, while it includes the specifically white races, it also has branches which are of much darker shades of color. The races which may be called truly white are the Teutonic, the Latin, the Celtic and the Slavonic families, which now number the most powerful and highly civilized nations of the world. These inhabit the greatest part of Europe and of the Western Hemisphere, the Teutonic races prevailing in North America and the Latin in South America.

Another family of this type comprises the Arabs, the Moors and the Hebrews, the last two being of swarthy complexion. The Hebrews, though scattered over the earth without a home of their own, have by their attachment to their religion and their aversion to intermarriage with other races so held their ground that they are probably as numerous today as they ever were. Some credit the Afghanistans and the Berbers to the White type.

The Yellow Type

Earlier authorities added the Red and the Brown types—the Americans, the Indians and the Malays—but by others these are considered as forming branches of the Yellow Type, which is then the most numerous of the three types. The origin of the Yellow Type has been pretty clearly traced to Central Asia, not far north of the Himalaya Mountains. The chief characteristics are straight black hair, yellow, brownish or copper colored skin. Most numerous among them may be named the Chinese, Siamese and Burmese. The Mongolians of Western Asia, the Koreans and the Japanese, the latter being among the most advanced of this type in civilization. The only representatives of the yellow type in Europe are the inhabitants of Finland, Lapland, Hungary and Turkey, all well advanced. The Malays, or brown branch of the yellow type, people the larger and smaller islands lying south and east of Asia. They also include the Hovas of Madagascar.

No more interesting family of the Yellow type exists than the Indians, so called—the copper colored races of North and South America. Their origin is lost in mystery, some supposing that their progenitors crossed Bering Strait from Asia. They include the Eskimos of Northern Asia, North British America, Greenland and the Arctic Islands. These peaceful and harmless people, short in stature, have adapted themselves to their frozen homes with no small degrees of intelligence. The American Aborigines also comprise the numerous Indian tribes that once possessed what is now the United States, the Aztecs of Mexico and the early Peruvians, of an advanced type, and the lower and more savage tribes of South America, including the Patagonians. The Indians of North America, hating the whites, have mostly kept their blood pure, but in South America and Mexico they have mixed with their Latin conquerors.

MEXICAN FAMILY GROUP.
Type of Aztec-Spanish Admixture.

The Black Type

Black skin, thick lips and woolly hair characterize the representatives of this type. An exception in texture of hair is seen in the Negroids of Australia and Melanesia who have nearly straight hair. They are tall and warlike—all typical cannibals—wear little or no clothing and rank as the lowest specimens of humanity, nearest to brutes. The Negroes of Africa rank somewhat higher in the scale. They are adapted to residence in tropical climates and are far more exempt from the malarial fevers of such regions than any other race. Being of a weak and inoffensive disposition they have been far more contented in slavery than the Indian or other races, and have thus been imported until their descendants have added to the population of America to the number of ten or twelve millions of Africans. In the United States they have made laudable progress in intelligence and thrift since emancipation and have lifted themselves far above the state of their African ancestors.

LORD KITCHENER OF KANDAHAR.
A Type of the High-class Celt.

Pygmies

Within recent years distinct proof has been given of the existence of tribes of pygmies or dwarfs that can hardly be referred to any of the types above named. Their status was long suspected but not fully confirmed until after the middle of the nineteenth century. The Bushmen of South Africa and three tribes of the central regions of that country are the best known. These last average about 4½ feet in height when full grown—the height of an average American boy of ten years. Most of them are peacefully inclined and show some intelligence.

Groups and Sub-Groups

Of these three great primary groups each comprises a number of sub-varieties sufficiently specialized by peculiarities of speech or habitat and by other zoological characters, to warrant dividing them into various secondary divisions.

The Ascendant Whites

Making up one-half the world's population, the Caucasic Division constitutes quite seven-eighths its civilizing energy and vitalizing on-march. It has spread over the globe so that nearly three-fourths of the habitable regions are now under its political control. In a following chapter, that of Political Geography, it will be shown how thoroughly the Great Powers, as they are known, now dominate the choice regions of the earth. The Ethiopic and Mongolic divisions are of such a nature as to be easily separable from the Caucasic, and their subdivisions require but little examination to place them in their proper class. The Caucasic, on the other hand, because of its varied characters, its wide range, and its dominant importance requires a brief notice of the subdivisions into which it is usually separated.

It is by no means a familiar thought to most

White "Blood-Brothers"

readers, though it has been the teaching of textbooks for some years that the Iranic, Indic, Indonesian and Ainu subdivisions are true members of the White Division. That the Hairy Ainu, the fierce and repulsive Maori, the gentle Hawaiian, or the even more peaceful Samoan are our close "blood-brothers" in the color classification is a surprise to many who may have known, but have forgotten it.

LI HUNG CHANG.
Eminent Chinaman who won world wide fame.

From the population estimates of this brief survey of human classification it seems reasonable to believe that the Ethiopic group has been losing ground since Neolithic times and the same is probably true of the American section of the Mongolic group. On the other hand the Asian Mongolic and the Caucasic groups have been gaining and this is especially true of the latter, now constituting over one-half the worlds people. A table of population estimates, in round numbers, reads thus:

Caucasic (White)	770,000,000
Mongolic (Yellow and Red)	562,000,000
Ethiopic (Black)	175,000,000
World's population	1,507,000,000

The foregoing estimates of population are taken from those given by Mr. A. H. Keane whose article "The Peoples of the Earth" has already been referred to. Mr. Henry Gannett in his recently published "Statistical Summary of the World," gives the following estimates:

Caucasic (White)	616,349,000
Mongolic (Yellow and Red)	721,569,000
Ethiopic (Black)	165,372,000
World's population	1,503,290,000

In this necessarily brief resume of the generally accepted classification of mankind it should be remembered that its very generic nature precludes the possibility of exactitude. To go into the sub-racial classification, to deal with the multitudinous intermixtures and crosses between the races would occupy space far beyond the possibility here. Yet such a full consideration would be necessary to explain the many very apparent contradictions that will occur to the reader. It should be remembered, therefore, that man is the product of all the evolutionary processes and is even now in the very cauldron of the formative process—perhaps more now than ever before.

AGUINALDO, EX-LEADER OF THE PHILIPPINES.
Typical of the Malay-Mongol (Tagalog) Race.

POLITICAL GEOGRAPHY.

The Land and the People

In common with most departments of science, the great body of knowledge included under the term Geography is capable of certain practical applications to human affairs. Broadly speaking, Political Geography is the application of the data of these two great divisions of the science—Physiography and Anthropogeography—to the affairs of men in those groups or communities which in their development we term States or Nations. Dr. Keltie has well outlined this in the following words: "Groups of this class are of all grades from the isolated village community and the nomad tribe of savages, up to one of the 'Great Powers'; but whatever its grade, it is impossible to conceive of any community without associating it with an area of land or territory of greater or less dimensions. The land and the people are integral parts of the State or political community, the one being as indispensable as the other and therefore a knowledge of both is absolutely essential to a satisfactory understanding of the life and activity of the State." In addition it may be said that all of Geography has a practical bearing on this branch of our subject, as it deals with the Earth's surface, the theater of human activity.

Importance of Latitude

All points on the Earth's surface are determined by latitude and longitude, as is sufficiently explained elsewhere. In this way the position of a country or the confines of a nation are indicated. From the standpoint of Political Geography latitude is of far more importance than is longitude. Toward the polar extremes, because of the intense and forbidding rigors of the cold, political, social and industrial development is arrested, if the land be not absolutely uninhabitable. So, too, with certain modifications and to a less degree, extreme heat exercises an arresting, development-deadening influence on man. The great advances in civilization, in political, social and industrial development, have been made in temperate climates." No tropical country or equatorial belt has anything in history to show nearly equal to the triumphs of ancient Greece or Rome, or the present-day achievements of the Germanic races and their derivatives.

Importance of Longitude

Longitude, however, is by no means a negligible factor. A country's position with respect to its continent, as effecting the modification of its climate, as isolating it from maritime attack, and as influencing its commerce with reference to its distance from important seaports, will be seen at once to be of great importance.

Importance of Elevation

The physical characters, the elevations or depressions, the distribution of land and water, the nature of the soil, must all have a potent bearing on political, social and industrial development of the people inhabiting any country or region. It has well been pointed out that a mountainous country like Switzerland or Abyssinia or a high plateau country like Tibet, presents very different conditions from the well-watered plain of northern Germany, the black earth region of Russia, or the prairies of North America. The highlands of Scotland have reared a different type of people, have had a different history, and a different development from the lowlands, and from the great plain and uplands of England. These, again, present marked contrasts with the conditions of life and the history of the Sahara and the desert of central Australia. An island state, like Great Britain, is influenced by a different set of conditions from those which prevail on a continental state with contiguous neighbors.

Importance of the Coast Line

The configuration of a coast-line is another important factor in influencing the development of a country. It may be rich in bays and gulfs and estuaries, and fiords forming excellent harbors and giving easy access to shipping, as in the case of Europe, or it may be marked by an entire absence of such advantages, as in the case of Africa, the greater part of the coast of which cannot be approached by shipping, and which, except in the case of the Kongo estuary, has no indentations going deep into the land. But it should be pointed out that modern engineering skill has been able to evercome some of these disadvantages, and to create a new set of geographical conditions. (Ibid.) The cutting through of the Suez Canal, or the changing the drainage shed of the Chicago region from that of the Lakes and the St. Lawrence to the Mississippi Basin, both already described, and the proposed severing of the Panama isthmus by the American Canal, are all cases in point illustrating civilized man's power over geographical barriers.

Mountains and Rainfall

Mountains are a very important factor in this branch of our subject. Aside from their effect on the average of temperature, because of their elevation, and the more or less adverse conditions they present to husbandry and commercial intercourse because of their varied and abrupt contours they play a most important part in modifying the distribution of rainfall. This very largely depends on the aspect they present to the prevailing winds. The rain-bearing winds may be tapped by a mountain system so as to distribute the precipitation where little or no agricultural benefits can be expected. The Himalayas are an excellent example of this. By that mighty system the monsoons from the south are intercepted and the result is heavy rains and tropically luxuriant forests and other vegetation on their Indian, or southern side, while to the north on the Tibetan side we find sterility and a most inhospitable climate. In like manner, no doubt, the Atlas range of Morocco, intercepting the moisture from the Atlantic and the Mediterranean, contributes largely to the arid condition of the Sahara. That portion of Ecuador which extends from the high Andes to the Pacific Ocean, in the latitude of Quito, is an excellent case in point. There the Arctic rigors of the higher glacial peaks, the sub-Alpine characters of the mid-pinnacles and connecting ridges, the temperate conditions of the plateau around Quito, the sub-tropical conditions in the foot hills, and the sweltering heats of the Equatorial lowlands along the coast follow each other in a rapid descent in elevation that occupies but little over ninety miles, and the condor flies in a straight line. How this effects plant life and animal life has been clearly set forth herein under the captions of mountains and of zones of distribution of animate life. That man, dependent on animals and plants for food, clothing, housing, and many other comforts or necessities, is also greatly modified or influenced by these zonal limitations is well shown by comparisons easily made in many parts of the world.

Hydrography

The distribution of the water supply, the Hydrography of a country, is very evidently a factor of major importance in political Geography. As we have seen, rivers and lakes are the main forms in which water is found on the Earth's surface, apart from the ocean and its subdivisions, seas, gulfs, bays and inlets, fiords, lagoons and straits.

Water-Powers

Where considerable fall is present in the bed of a stream, where there is waterfall, or where a steep bank or a favoring point for damming its course is afforded a water course becomes the source of power for machinery, in place of steam. The Atlantic slope, with its rather rapid descent from the Apalachians to the coast, abounds in such power, as does also Switzerland and Norway. In the latter two regions electric lighting is common even in small villages, because of the abundance of such cheap power; and the same is coming to be true of California and other far western states. Niagara Falls, on both sides of the river, afford a vast supply of the electric energy which is utilized throughout a territory covering several hundreds of square miles.

City Water Supplies

Lakes, especially where their supplies can be stored during wet seasons for use during dryer periods and for distribution by canals or other artificial courses, are of great importance, especially as the source of water supply for towns and cities. The Valley of the Croton, now by a mighty dam turned into Croton Lake in Westchester County, New York, is a marked case in point. The damming of the Nile at Assouan, that the waters of that beneficent stream may be conserved and evenly distributed, is an even greater triumph of engineering skill.

Inland Water Transportation

While the value of inland water transportation has been greatly decreased by the rapid development of steam railways and electric roads, its importance where direct connection with the deep sea allows of ocean-going vessels penetrating far inland is still very great. Marked examples of this are to be found in the system of the Great Lakes of North America now connected by a perfected chain of canals by the lower Mississippi, by the Hudson, Delaware, Rhine, Elbe and Danube rivers, and especially by the Amazonian system, where the absence of other transportation has developed that stream and its mighty tributaries into "the Mediterranean of South America," as it has well been called. It must be apparent, then, that all other items of Physiography being equal, man will be found most densely gathered together and in a higher state of political and industrial development where the Hydrography is of the most favorable sort.

Area

Area is of great importance, of course, yet size is by no means a prerequisite to great power, as was evidenced by Athens, Sparta, Phœnicia Carthage, in ancient times, and Great Britain, the Netherlands, and Portugal today. The United Kingdom is a most striking example of this. Its comparatively diminutive size is supplemented by its geographical position, its complete surrounding by the protecting ocean, the nature of its population, its climate and mineral resources. This combination has constituted it for several centuries the ascendant world power, and it has spread forth until to-day it governs or controls the largest area under one scepter. But on a continent proper, however, a small state rarely develops into a great power in these recent years of vast standing armies because it does not furnish the population on which such an army can be maintained. The Netherlands and Portugal already mentioned may seem to contradict this statement; but as a matter of fact, their pre-eminence depends largely on their colonizing energy and their commercial acumen, in addition to the fact that the balance of power among the larger nations is such that no one of them dare aspire to absorbing a smaller neighbor. However, homogeneity and juxtaposition are requisites to a certain extent for great national security. In this respect the United States is especially strong. Its area represents more in world power than does any other like area where scattered. The nature of the people is also to be considered in this connection and no better illustration of this is needed than to call attention to the strong bond of loyalty existing among the citizens of the United States and the equally potent lack of it and mistrust one of the other among the classes and subjects of Russia. A prime danger to all countries aspiring to world power or to a prominent place in the world's commerce or to such as have lands likely to be coveted by neighbors or colonizing powers lies in extensive frontiers and a numerous series of deep water harbors. Or, to state it otherwise, a principal danger is to be found in accessibility, whether by land or by water.

Boundaries

"Landmarks" are a most ancient institution; but they are slowly disappearing from the face of the earth as boundaries become more and more things of paper and less dependent upon exact physical character. As there is usually a zone of transition between valley and hill, between forest and plain, natural boundaries are rarely hard and fast lines. The Ocean, while affording the most complete and resolute of dividing lines, is, nevertheless, frequently an uncertain one. Dividing higher ridges of mountain ranges are ideal boundaries, but they call for a degree of surveying exactitude which frequently results in their being among the last to be accurately delimited. A river channel, though frequently used as a boundary, is among the most uncertain. The line naturally leads through the "Thalweg," which is the deepest channel of the main stream where the main current is supposed to pass, but, as will be readily seen, this is by no means easily ascertained, which side of an island a current may be largest, or which one of its upper tributaries may be the stem or principal course, being always factors open to much dispute.

Neutral Zones

Human races are seldom sharply separated, those along the border-line usually intermingling to a confusing degree. This is well shown along the United States-Mexican boundary line, where on either side of the Rio Bravo del Norte (Rio Grande), for example, the population is frequently nomadic and beyond the power of classification. Among primitive people in Central Africa, for example, there is usually a sort of neutral zone, which is observed by the parties on either side and which is regarded as a "No Man's Land," where all may meet with equal freedom. This same thing with greater regulation of law, has long been present along the Rio Grande border, where a zone fifty miles wide has practically been open to the peace officers of both Nations—the United States and Mexico. On the tributaries of the upper Amazons there are regions where no one knows exactly under what jurisdiction he is living, and very few, if any, care.

Old Boundary Selections

Ignorance of the geography of a land has led to some strange errors in selecting boundaries because of the difficulty of selecting the main stream, already alluded to. Some boundaries have been mistakenly run along tributaries, to the effect of greatly confusing boundary commissions, who found the surveys running on one stream and the treaties speaking of another. Such a case is the recent one in the Acre or Aquari District of Bolivia and Brazil, where misunderstandings as to the principal water courses have led to an almost interminable controversy between those two countries and Peru. Lake of the Woods, on our Canadian boundary, is an interesting case in point, as will be noted on consulting the maps of Minnesota and Northwest Ontario, herein. When this boundary was arranged by treaty in 1846, the convention agreed that it was to proceed across Lake of the Woods to its northwest corner. Afterwards, however, it was discovered that the Lake extended much further to the northwest than was at first thought, and the outcome has been that at present the United States possesses a peculiar neck or promontory a section of territory evidently intended to be within Canada and the islands in the lake are divided in a most unnatural and arbitrary way.

The High Sea

As has already been pointed out, the ocean is a most uncompromising source of boundary, once it has well been surveyed and it has been agreed as to which of its bays and indentations are to be regarded as part of the high sea and which a part of the adjacent country. Usually three miles from mean low tide is considered within the jurisdiction of the abutting land, all beyond being regarded as the High Sea, and the acts on ships thereon being entirely within the jurisdiction of the nation whose flag is flown. Exceptions to this rule are made, however, where the abutting land belongs to a very minor power or semi-savage people; and there are many cases where very considerable arms of the Ocean are removed from the high sea by agreement. For example the Bering Sea is apportioned about equally between the United States and Russia the high sea ending theoretically three miles below the shore line of the Aleutian Archipelago. The importance of very small boundary changes is well illustrated by a recent decision of the Supreme Court of the United States in giving two or three small islands near the mouth of the Pearl River, which for many years have been in dispute between Mississippi and Louisiana, to the latter. These rather barren

Importance of Small Changes

sandy islands because of their great fitness for the oyster trade, were considered as worth several million dollars to the contestants. The eagerness and persistency with which some apparently unimportant boundary disputes are maintained is well illustrated by the recently settled Alaska Boundary Dispute. At first thought remembering the bleak climate, one would imagine the forbidding mountains along that boundary could hardly be reasonable cause of complaint. But when the rich Klondike region, just to the north is remembered, and the desirability of deep harbors for seal and other fisheries are recalled, the value of a few miles either way, when those miles may be teeming with precious minerals or may open access to deep and commodious landlocked harbors, the dispute takes on a very different aspect.

In the western states of the United States the plan of having township, county and state boundaries follow mathematical lines, parallels of latitude or longitude or fractions thereof, has gained favor, until now it is the ordinary practice. This is coming to be more and more the custom when newly demarked colonial territory is alloted among the powers.

Towns

Probably the first cause for the assembling of human habitations into those collections which we now know as villages, towns or cities, was that of mutual protection from enemies or beasts of prey. At first these usually grew around the fortified castle or stronghold of the most powerful chief of the region. This tendency grew to its greatest state in the days of the feudal barons. To-day it is to be found in Central Africa, where, around the headman's kraal the huts of his followers are grouped, usually within a protecting wall. As mans' industries developed other causes of this community of settlement were found. Men of the same occupation, especially if dependent upon local conditions for material, or for power, naturally gravitated together. Seafaring people necessarily settled on or around a harbor; a weaving or spinning community near sufficient water power; a farming community naturally clustered together around some most arable center.

Class Communities

The late Mr. Green, historian of the English people, showed "how natural it was that London should have started in its marvelous growth from the landing of the Romans on the first little height of land they reached, on sailing up the inviting estuary of the Thames, which is the natural highway into the heart of the land for the traffic from the Continent of Europe. It became the great *entrepot* and distributing center where, in time, much of the commercial business of the world came to be transacted. To this day it remains the world's financial capital. This, with the fact that it became the capital of the Kingdom and the Empire, will to a large extent account for its wonderful growth." So, New York, on beautiful, inviting, safe and commanding New York bay, at the lower end of a remarkably deep inlet, or arm of the ocean, as the Hudson river really is, came naturally by its position. Chicago, also, at the lower end of the Great Lakes, at a point whither all rail traffic from the abounding Northwest must be deflected somewhat southward to pass around or under Lake Michigan, had its logical position picked out for it by the geographic conditions.

Geographic Reasons for Location

All towns may truthfully be said to have within themselves or in their surroundings sufficient reason for their placements. Cripple Creek, in the center of Colorado's metal wealth; Dawson City, metropolis of the Upper Yukon and Klondike regions; Para, at the mouth of the mighty Amazons; St. Louis, where the Mississippi and Missouri meet; Albany and Trenton, at the head of navigation on their respective streams; Cape Town or Port Arthur, one and all need but to be mentioned for the reader at once to recall the advantages of their geographic positions.

Political Conditions and the Habitat

An inquiry as to how far the political conditions and form of government are the outcome of the geographic conditions of the habitat would be a most intricate yet interesting one. An insular land must of necessity give prominence to naval affairs (e. g., Great Britain), while in a land of great dimension with comparatively small sea boundaries, as in Russia, the army must assume major importance. Doubtless the water-surrounded position of Japan, making of that people hardy and daring sailors, and the few good seaports and the inconsiderable marine trade of Russia, had much to do in shaping the very unequal sea achievements in the recent war between those powers. It is beyond question that a people inhabiting a mountainous region, of inaccessible valleys and slopes and forbidding passes, is of all the most difficult to subjugate and the most resentful of tyranny. Switzerland is a prominent illustration of this fact.

Colonization

Given stability and growth, colonization seems to be a natural product of the combination. The overflow, and very often the hardiest of the surplusage, seeks new fields; and all other things being equal prefers those fields where the same flag and the same political and social conditions will render the change of home least inconvenient. Expansion naturally first takes on the form of growth into contiguous regions. Thus the growth of the United States for the first century of its existence was into the middle west by treaty with Great Britain, into the great Louisiana Territory by purchase from France, into Spanish Florida by aggression, into the far Pacific coast region by discovery and treaty, into Texas by mutually agreeable absorption, and into Northern Mexican territory through the results of warfare. Great Britain, with an area of 120,979 square miles in the United Kingdom, controls a world-wide domain of 11,370,000 square miles, or outside holdings quite ninety-four times the area of the "home" country. Such growth is often of very dubious utility.

COMMERCIAL GEOGRAPHY.

Simple Needs of Primitive Man

In the contrast between primitive man and man of the higher civilization, in the difference of their habits and especially of their requirements, we find the prime explanation of the modern growth that is comprised in the study of commercial geography, or the geography of commercial inter-relations. Primitive man finds about him on every hand the materials, whether vegetable fiber or the skins of animals, for his scanty clothing; if, indeed, he be not so primitive as to require no clothing whatever. So, too, from the grasses, palms and bamboos, he obtains almost ready prepared material for his crude and hastily constructed hut. Growing around him he finds, principally among the bamboos and in the hard midrib of the cocoanut palm leaves, material for his crudely shapen spears, bows and arrows. His foods are equally primitive and equally easily found growing near to hand. If he be, as is so often the case with his class, a vegetarian, his food, mainly of nuts, roots and esculent herbs, is yielded without any cultivation on his part, and, if he has progressed sufficiently far to become a meat-eater, the arts of the chase and his hasty methods of preparation by fire are of the most primitive sort. In fact, as illustrated by the Pygmies of Central Africa and the "Black Boys" of Interior Australia, it is only in the matter of the adornment of his womankind that he seems to come in contact with outside commerce. There, the need for some plain brass or copper wire from which to fashion neck and waist bands, armlets, anklets and wristlets, ear rings and nose rings, covers his entire need for the products of outside man.

Civilization's Multiform Needs

With civilized man of the highest culture we find matters exceedingly different. He calls upon the products of the globe and of every civilized and savage land before his manifold wants are satisfied. His hat may be the product of the fur from Australian rabbits, his linens come from the looms of Ireland, his outer clothing be of tweeds from Scotland, his necktie be of the silk of France or perhaps of China, his woolens from the sheep of Montana, his shoes from the hide of some colt but recently roaming the Siberian steppes, and his gold adornments, if such he wear, from the mines of Alaska, Nevada, or of the far South African Rand. Equally diverse we observe his wants to be, when we enter his domicile. The interior trimmings made from the oaks of North Carolina, the mahogany of Honduras, the pine of Michigan, or the poplar or gum of Tennessee, are set off by the rugs and draperies from Bokhara, Bagdad, Samarkand, Teheran, or Kashmir. The light of day sifts in through curtains from Lyons or Chemnitz and is reflected in mirrors of French or German plate, and again caught up by the glint of Bohemian, English or Brussels glassware. His piano is incased in African rosewood, its notes are given forth by German metal strings, played upon through the medium of keys that are derived from the ivory of India and the ebony of South America.

Importance of Commercial Geography

In this brief sketch of the great differences between the two widely separated classes of man we get a fair glimpse of why in recent times commercial geography has become a prominent and perhaps the most prominent branch of the general science. Perhaps it might better be termed economic geography because, as will be seen in the following, wherever the economics of life have to do with the region of production, the method of transportation, or the area of sale, they fall under this classification. Certainly, no branch of our subject, so closely and practically bears upon the every day life and the well-being of mankind. If he needs other than he produces it is with geographic facts that he must deal to ascertain whence come his needs. If he produces that which he desires to sell to his fellow men, equally to geograhpy must he turn for a knowledge of who and where are his customer and market. And whether he be buyer or seller, the methods whereby his purchase is to be brought to him or his sale be taken to his customer—the problem of transportation, in a word—is a most important topic of inquiry in Commercial Geography.

The progress of internal development necessitates the establishment of communications by land and water between different sections of the country, or between different and widely separated lands. These will no doubt be simple enough at first, mere narrow tracks as in tropical Africa, permitting the passage of only one man at a time. The introduction of beasts of burden greatly improves intercourse and traffic, and this improvement, with increased manufactures and the establishment of market centers, leads to the growth of commercial towns. (Ibid.)

Physiographic Obstacles

There are various obstacles to contend with in international traffic or commerce. These may be geographical and frequently are, or they may be purely political. Of the former, mountain ranges to be surmounted over high passes, through which roads must be constructed, or later to be pierced by tunnels, or a lack of good harbors in a maritime state, or the presence of shallow water courses without those fitted for navigation, are principal drawbacks. An energetic state, however, may overcome all such obstacles, and in the territories of the great powers such victories over nature are ordinary achievements. Mountain roads and tunnels, artificially deepened harbors, breakwaters, dredged streams, are all triumphs over nature, requiring simply patience and time. As the industrial and commercial relations develop, it becomes primarily necessary to overcome the natural geographic disadvantages of distance. Improvements in the means of transit are an imperative need. Speed and carrying power must be increased and cost must be reduced. In this way new and undeveloped regions are opened up. Closely following this movement, the means of correspondence are improved. Electricity, in the telegraph and telephone is pressed into service; later cables girdle the world, and the most remote communities are finally brought into daily relations and almost instant touch, one with the other. With all of these improvements, and especially with the physiographic barriers first necessary to be overcome, Commercial Geography has to do.

With this hasty view of the general subject we see that Commercial Geography naturally divides itself into three parts: those of Commodities, Transports and Markets.

It should be remembered that natural riches are very unevenly distributed throughout our globe. As regards materials from the Lithosphere it is illustrative to recall, as examples, that Switzerland is devoid of coal, Holland entirely lacks building stones, and the United States do not produce a sufficiency of tin, sulphur or antimony. Heat and light being essential to vegetable life and being very unequally supplied to the various parts of the earth, and animal life—and especially mankind—being largely dependent on vegetable life, the foregoing dictum is explained so far as the inequalities of the distribution of natural wealth outside the Lithosphere proper is concerned. In the case of the materials of the Lithosphere the explanation is to be sought in geologic conditions sufficiently set forth in an earlier chapter.

Lithospheric Commodities

It may be pointed out, however, that the placement of these materials is that feature which has specially to do with Commercial Geography. Whether they be deep in mines and mountainous countries and must be removed from their natural position by tunnels and blasting, whether they be the products of surface mining and hydraulic action, or whether they are brought up from the sea, as in the case of the pearls, physiography is the keynote to their procurement.

Cultivable Commodities

In the second class of commodities those capable of increased yield by natural processes, modified by man, we have to do with all agricultural processes, with all vegetables and fruits, with timbers and other economic uncultivated growths, as well as with useful animal life, either alive or the products resulting from their death. Animal and vegetable life being more complex than is the nature of the mineral kingdom, the physiography takes on a dual form. First, that of the environment from which they are derived, and, secondly, that of the environment into which they are taken for cultivation and increase and where they best prosper.

Transportation

Under the general subject of transports, or transportation, the first classification having to do with means afforded by nature unimproved, deals mainly with the use of streams and the seas simply by drifting, or by such natural methods as require no improvement or inventiveness on the part of man. To-day, for the most part, with almost the single exception of the rafting or floating of logs, this form of transportation is to be found only among very primitive races. With the second class, or improved transportation, the question is very different. Here we have to do with a great variety of inter-related facts, with a mass of inventiveness and a fund of physiographic knowledge displayed by man, that perhaps transcends any other subdivision of our entire subject. In fact, it is probably the case that transportation as now conceived is in its earliest infancy. While it may be doubted whether steam as a motive power is likely very materially to be improved upon, electricity on the other hand is just entering upon its fuller development, and the most imaginative of us are probably not capable of foreseeing to what extent its wondrous powers are to carry us. If this be said of electricity, as applied to motive power and transportation upon the surface of the earth, what shall we say of it when, a few years hence, it shall be successfully applied to aerial navigation. Man is at this moment just on the verge of successful flight. In fact, in our own country as well as in several parts of continental Europe, experimentation has been carried to such an extent that it is now safe to say that man has discovered the principle of doing what nature never did, constructing a large flying body, capable of self-direction and long sustained motion. It will be observed that the South African condor is probably the largest and heaviest flying body constructed by nature. Yet, divested of its wings, the body of the condor will not weigh much, if any, over 25 pounds, and is in fact not really larger than our own wild turkey. The latter, however, is not capable of long sustained flight, depending mainly upon its soaring ability and the force of its starting run to go from one nearby point to another. Some of the great lizards, or lizard-like birds of geologic times, the *pterodactyles,* for example, could not fly, in the strict sense of the word, but were only capable of soaring or gliding from a high point to a lower. Man, however, already is navigating the upper air with his own average weight of 160 pounds, and as much more added for motive power and the strengthening construction of the flying mechanism. This having been accomplished, if only a few times, it is safe to predict that at an early day the wonderful development already observed in the automobile will follow in a like manner in the upper air, and to foretell that we are on the verge of a series of successes that will revolutionize our conceptions of the transportation of humans and of smaller weights, the effect of which on commercial geography can hardly be conceived at the present time. It would seem that when this day arrives boundaries, especially as they have to do with lines of customs exaction, will be largely things of the past.

Markets

When we come to a consideration of the last subdivision of our classification, that of markets, we take up a subject that has become ramified and diversified to a marvelous extent in these recent years of the higher civilizations. This has been briefly indicated in the opening description of the difference between primitive and civilized man in the first part of this chapter. Room does not here afford to go extensively into this subject, but it is necessary to give a brief outline of how thoroughly the markets of the world are dependent upon the physiography of the globe, and to point out how intensely practical and essential is a knowledge of this branch of commercial geography to the further advance of mankind.

Standardization of Commercial Factors

Money

There are certain ideas and commodities that need to be uniform, to be standardized, among the chief trading peoples of the world before commercial relations between them assume that ease of transaction requisite to their fullest development. Chief among these are money, the medium of exchange, weights and time. History does not reach back to a time when some sort of money was not in existence among primitive man, and the excavations of the archeologist show that such use far antedates the historic period. There are, however, savages at this day who have not learned the use and advantages of a medium of exchange, but who conduct all their very simple commercial intercourse by the most promitive methods of barter and exchange. Excavations in the mounds of prehistoric man in North America indicate that he recognized certain ornamental articles of copper, shells, etc., as media of exchange. The same is true, but in a more advanced way, of mankind in early South America, North Africa and Eurasia. In Australasia there seems to have been little, if any, movement in this direction; and this state of affairs still is found to exist among the very primitive blacks of the interior of Australia. For the most part, however, man seems long ago to have recognized that a currency of stable value is of the greatest importance, especially in trade with outsiders. Naturally, gold is used for coins of the higher denominations, silver for those of less value but greater circulation, and copper (in later years much alloyed with or supplanted by nickel) for the smaller pieces, the "change," of commerce. In most of the leading commercial lands gold has come to be the basis of all coinage and of the issue of paper money based on such coinage. This has greatly added to the convenience and safety of international commerce. The search for and the discovery of each of these have had much to do with shaping the maps of the world and with the rapid development of those regions where they have been found in paying quantities. For a fuller consideration of their characteristics, places of abundance and the influence they have exerted on geography and man's history, the reader is referred to the preceding chapter on minerals and to the sections dealing with the physiography of the United States and its possessions.

Weights and Measures

It is apparent at a glance how much of an impediment to business relations the use of different standards of weights and measures must be. So clear is this, after a moment's consideration, that it would seem most unlikely that at this late day in the advance of human commerce we would find the principal nations of the world at variance in so essential a feature of their trade intercourse. Yet, as a matter of fact, there are in use to-day quite a dozen different linear measures, known as a mile; and in the United States the common content measure, the bushel, varies in weight to an extent almost equal to the number of the states and territories. These are but samples of many similar confusing cases. Many of the countries of continental Europe, all of the great commercial nations except the United States and Great Britain, in fact, have adopted the metric system, originated in France, as a standard for dimension, content and weight. That the two countries yet failing to adopt this uniform and logical system lose much by their conservatism is shown by the following instances, one of very many that could be enumerated. As reported at the time, large government contracts for iron bridges, in Norway, in 1900, were given to Belgian bidders, because otherwise successful bidders in England insisted on estimating on a basis of British feet and inches; the Norwegians, however, declined to reduce their metric specifications to the older basis. As over two-thirds of the people living under Christian governments now use the metric system it was a wise move on the part of our Congress to authorize the transaction of business under that system of standards, although such system has not been made official or obligatory. This adoption is likely to come before many years, the time being hastened by the present confusion and inconvenience of a dual system incident to a period of transition.

Solar and Standard Time

A greater uniformity has come about in the standardization of time among the principal nations than yet exists in the media of exchange and in weights and measures. The rapid development of railways, steam navigation, and of the telegraph and cable systems throughout the world have had most to do with this movement. Reading at our breakfast tables of battles or other transactions that had taken place in an afternoon not yet arrived for us, did most to bring home to us the comparative kinship and neighborhood condition under which the electric fluid has brought us, and at the same time caused us to realize the progress of the sun's rays over the surface of our globe as it revolves on its axis each day.

Degrees and Hours

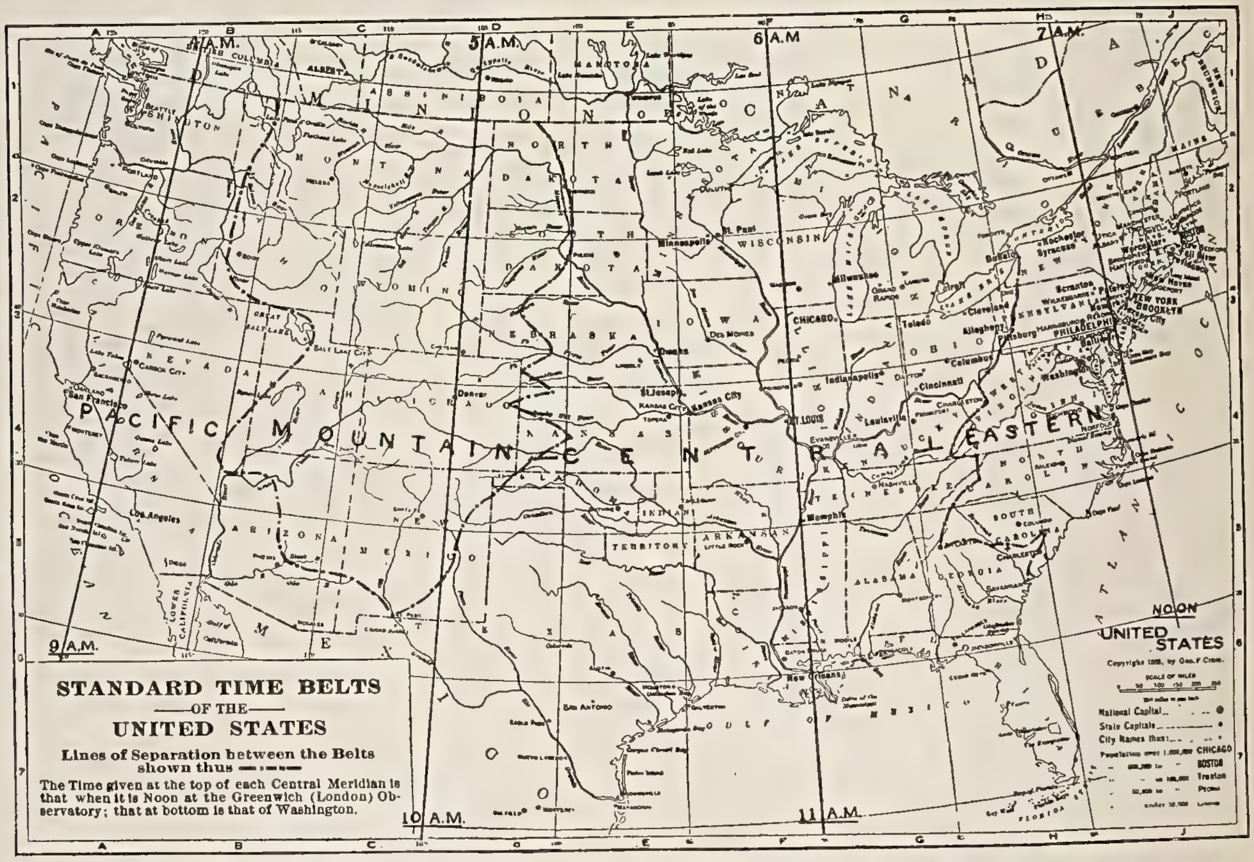
The earth makes one complete revolution on its axis in twenty-four hours, and thus the sun, in its apparent diurnal revolution, moves through 360 degrees of space in twenty-four hours. It thus moves over 15 degrees of space in one hour, from which it is evident that the difference in longitude which causes the difference in the relative time, may be estimated in time, allowing 15 degrees to an hour, or one degree to four minutes. Therefore, suppose a man starting from any given point, travel one degree west, his watch, instead of marking 12 o'clock at noon, according to the correct time at that place, would mark four minutes after 12. Let him travel 15 degrees, and he will find that 1 o'clock by his watch will be noon-day by the sun. Let him go on to 120 degrees, and when the sun is in the zenith his watch will indicate 8 P. M. Completing his journey around the Globe, he will have gained in this manner twenty-four hours. From this it will be seen that in order to obtain the correct date twenty-four hours must be subtracted from his time. On the other hand, if a person could travel eastward at the same speed with which the sun apparently travels westward, (the same rate of speed with which the earth revolves on its axis,) if he should start on his journey at noon-day, he would meet the sun when exactly on the opposite side of the earth from the place of starting, and continuing the journey would again meet the sun at the place of starting, thus seeing three noon-days within twenty-four hours, or apparently gaining a day. This, we know to be impossible, since only twenty-four hours of time have passed, while in reality an extra period of light has been gained, and thus to obtain the correct local date a day must be added to our time.

Prime Meridian

All the leading nations except France take Greenwich (London) as the Common Prime Meridian, or as O° of longitude. Until recently Russia estimated longitude and time from Moscow; but, now, only the meridian of Paris remains on French maps to confuse the student and the cartographer.

The Need of Standard Time

Philadelphia being at 75° W., has time exactly five hours earlier than that of Greenwich. Harrisburg, somewhat west of Philadelphia, and New York, somewhat east of it, have, according to the sun, *i. e.*, in solar time, an earlier or a later hour. It will be seen that to traffic and news agencies, and especially to railroad schedules, a variation that changes perceptibly every few miles is a source of much inconvenience and of many mistakes. Most people remember when every town had its railway or "depot" time at the station, and its "city" or solar time at the town hall.



STANDARD TIME BELTS
OF THE
UNITED STATES
Lines of Separation between the Belts shown thus —·—·—
The Time given at the top of each Central Meridian is that when it is Noon at the Greenwich (London) Observatory; that at bottom is that of Washington.

Railways and Standard Time

The exigencies of railway travel are responsible for what we know as Standard Time. Especially in a country of wide extent like the United States, it is of the greatest importance to have a uniform system of time and a standard or unit of time for each one of several "time belts" into which the country has been divided. Those officials having charge of passenger transportation on the main or trunk lines of railway, doing a transcontinental business in the United States, came to an agreement some years ago, whereby the country has been divided into four regions or Time Belts. These are: (1) the region of *Eastern Time,* reckoned on the 75th meridian, or that of Philadelphia, and five hours earlier than Greenwich time; (2) *Central Time,* based on the 90th meridian, or six hours removed from Greenwich; (3) *Mountain Time,* calculated on the 105th meridian, seven hours from Greenwich; and (4) *Pacific Time,* on the 120th meridian, and eight hours earlier than the time at Greenwich. It will be appreciated that the local or actual sun time of most places in any of these belts will differ somewhat from its standard time, varying according to its distance from the governing meridian. For example, while Philadelphia sun and standard time are coincident, New York, one degree east of Philadelphia, has sun time four minutes faster than the standard. It follows, also, that points at the extreme of the belts are frequently a half-hour at variance with the meridian hour; such points are usually chosen at which to make the transition from one belt to the other.

Time Transition Points

Buffalo, as an example, is such a point of change, as are also Pittsburg and Atlanta. At Buffalo the train from New York City arrives with the standard time of the eastern belt, but it departs for Chicago with that of the central standard. Thus, it may come that, according to the time table, when a west bound train will arrive at Buffalo at 8 A. M. and leave there at 7.05 A. M., apparently tarrying fifty-five minutes less than nothing, although in fact making a stop of five minutes. On its return it will arrive at 8 A. M. and depart at at 9.05 A. M., its stop of five minutes in the eastward direction appearing on paper as one of sixty-five minutes. It will be understood that the hour of noon on the chosen meridian marks noon as the standard time for every point within its belt; thus noon at Chicago is noon at both Youngstown, Ohio, and North Platte, Nebraska, although they are somewhat over an hour apart in sun time from each other.

Arbitrary Transition Lines

An anamalous and seemingly inexcusable state of affairs is caused by the arbitrary running together of the Central and Pacific Belts in southwestern Teyas, where the transition at El Paso is one of two hours, the trains bearing Chicago time going immediately into that of San Francisco. Again, by an arbitrary extension of the Central Belt to meet the Atlantic coast above Savannah, that belt in its southern stretch extends over a region having nearly one hour and forty minutes difference in solar time. The arbitrary lines of demarkation, or of belt transitional points, are best illustrated by the accompanying figure.

This standardization of time is becoming almost universal throughout the world of commerce; even China has recently entered the field and will soon announce a uniform system for the entire Empire.

International Date Line

From the foregoing we see that every time a person travels around the earth, in either direction, there is a difference in time of one day. To avoid the confusion of dates which must necessarily result from this constant gain on one side and loss on the other, it has been proposed to determine upon some line at which eastern-bound travelers shall add one day and westward-bound travelers shall drop a day from their reckoning, and thus prevent a disagreement in regard to the day of the week. The line at which this addition or subtraction shall be made is what is usually called the International Date Line, although the name is misleading, inasmuch as the international character is wanting. A conference of geographers representing the principal nations made certain recommendations to the Powers, but only a very few of these ever took the trouble to pass upon the report and still fewer to ratify it. While strictly not an international creation, a Date Line theoretically existing in the Pacific Ocean is recognized by the mariners of all nations; unfortunately, just where it is, is not so harmoniously regarded. The accompanying sketch gives some idea of the conflict still existing.

The Theoretical Date Line

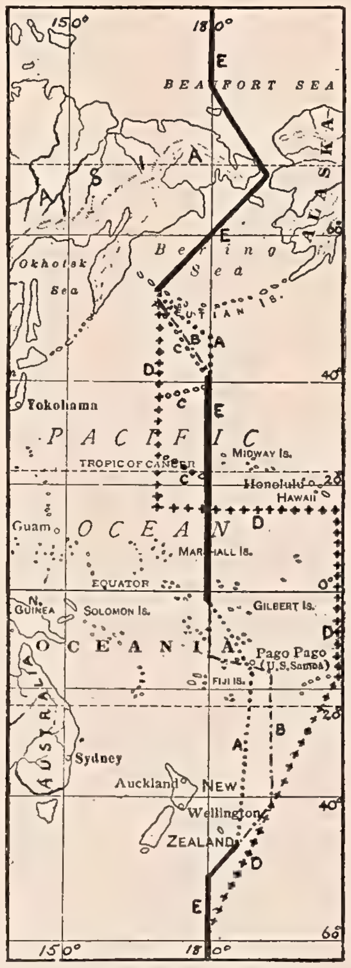
The sailors of the world of commerce have agreed to regard the 180th degree of longitude from Greenwich as the theoretical point where the date changes. This meridian, therefore, leads the day. Its passage under the 180th or midnight celestial meridian marks the beginning of a new day for the earth; here "to-day" becomes "to-morrow." We have a new date for the month, and a new day for the week in the transition. It is here that Saturday ends and Sunday begins. It is here, then, that Sunday was born, just to the west of Honolulu, but bear in mind that the day travels westward; therefore this new-born day does not visit Honolulu until it has made the circuit of the earth. Sunday travels west, but while the meridians of Honolulu and New Zealand are only about 30 degrees apart, or only about two hours, they are a whole day apart as regards any particular day, because the point at which the day changes lies between them. Again, it is evident that Sunday is a long way off from Honolulu because that place has only just passed out of Friday into Saturday, whereas New Zealand is passing out of Saturday into Sunday. Sunday travels west, because the earth travels east. Sunday must visit China, Russia, India, and all of Europe, must cross the Atlantic and the United States before it can reach the Pacific and Honolulu, and no sooner does Honolulu get out of Saturday into Sunday than Monday morning appears at New Zealand.

The Practical Date Line

The international date-line, though practically the 180th meridian, is a line drawn irregularly through the Pacific Ocean; according to the line adopted in this Atlas and by most navigators it passes south through Bering Sea; southwest past the Aleutian Islands; south from Attu Island on meridian 172 degrees east to parallel 15 degrees north; east on 15th parallel to 150th meridian west; south on 150th meridian to parallel 15 degrees south; west, clearing Society Islands, to meridian 155 degrees west; south to tropic of Capricorn; southwest by south indefinitely.

Antipodal Meridians

The day begins at the 180th meridian and travels west, because the earth travels east. When it arrives at London (Greenwich Observatory) it is twelve hours old; at New York about seventeen hours old; and at San Francisco about twenty hours old. When the day arrives again at the 180th meridian it is twenty-four hours old; it gradually grows less and less, with the new day following; the old day diminishes and the new day increases. When noon arrives here, the end of the day is at London, with the new day following close. The preceding day is west of the line, the succeeding day is east of it. The longitudinal quadrants of the earth are as follows:



The Principal Proposals for the INTERNATIONAL DATE LINE.

A—Wharton; B—Smith; C—Davidson; D—Geographers. The heavy line indicates coincidence of several proposals.

XII.—Noon—The initial meridian—London.

XI.—VI.—A. M.—The 90th meridian of West longitude—St. Louis.

XII.—Midnight—the 180th meridian—Fiji Islands.

VI.—P. M.—The 90th meridian of East longitude—Calcutta.

These are the four cardinal points of the circle. When XII (noon) is at London (Greenwich) one day and date prevail over the entire earth. If noon is either east or west of London, parts of two days are in operation. When noon is at London there is only a "to-day" upon the earth. When noon leaves London there is a "to-day" and a "to-morrow" in operation. Suppose, for instance, noon has arrived at St. Louis. St. Louis' antipodal meridian is the meridian which passes through Calcutta. Therefore, if it is noon at St. Louis it is midnight at Calcutta. All of that portion of the earth east of Calcutta is therefore into to-morrow, and there people could say of that portion of the earth west of Calcutta (which, of course, would include St. Louis) "that is in yesterday." When it is noon at London only one day occupies the earth, because there are twelve hours on either side of noon. The opposite meridian from London being the 180th degree, there it would be midnight. The antipodal meridian of any place is the one removed from it by twelve hours, or 180 degrees. To find your antipodal meridian, deduct from 180 your meridian. This will give your opposite meridian in opposite longitude. For instance, what is the opposite (or antipodal) meridian to New York? (75th W. L.) 180—75=105 E. L. is the antipodal meridian to New York. When noon leaves London on its travels west (everything goes west) and arrives at the 15th degree of west longitude, or, in other words, has advanced one hour to the west, the new day starting at 180th meridian is one hour old, and has advanced to the 165th degree of east longitude.

Change in the Philippines

In nearly all works of reference will be found recorded the statement that the date now used in the Philippine Islands is the same as that used on the American Continent, while on the adjacent Asiatic mainland the date corresponds with that of Europe. This was true, but it is not now a fact. There has been published (Vienna, 1891,) by Baron Von Benko, of the Royal Austro-Hungarian Navy, an exhaustive pamphlet (1891) on this subject, in which he reviews the history of the discovery and settlement of the Philippine Islands by voyagers from Europe, who passed through the Straits of Magellan and carried with them the dates used in the countries from which they sailed. The date in the Philippine Islands was one day later than that used on the mainland of Asia or on the Pacific Islands to the south, to the west, and also to the southeast. On January 1, 1845, all this was changed. Under date of August 16, 1844, Narciso Claveria, then Governor-General of the Philippine Islands, issued a proclamation which provided for the change of date at the end of that year. Accordingly, there was no day known as December 31st on the Philippine Islands in 1844, the midnight of December 30, being immediately followed by January 1, 1845.

The Need of Uniformity

One who compares various maps showing the Date Line in the Pacific Ocean is struck with the differences in that line as shown by various cartographic authorities. In the cut here printed, showing the principal of these different lines, that marked "Wharton" (A) is the one proposed by Admiral Sir W. Wharton, long hydrographer of the British Navy; that marked "Smith" (B) was proposed by Mr. Benjamin H. Smith, in the Century Magazine, September, 1899; that marked "Davidson" (C) is due to Prof. Davidson, of the University of California, and that marked "Geographers" (D) is that adopted by leading Continental cartographers, the editors of this atlas and the other publications of the same house, and by many, if not most, navigators. None of these now coincide with the facts. The American Samoans have, by formal vote, transferred themselves "across the line" to the "American day"; and recent claims of minor islands by the United States and by Great Britain have made other changes necessary. The need for international agreement was never greater. No hardship would accrue were the 180th degree taken as an inflexible date line, let it fall where or how it might. This subject has been treated thus fully because it is one of great importance, regarding which there is much misapprehension.

THE GROWTH OF OUR COUNTRY

Populations of all Places of 3,500 and over for the Census Years 1910 and 1920 and Their Elevations above Sea Level.

GENERAL POSTAL INFORMATION

DOMESTIC MAIL MATTER AND RATES OF POSTAGE.

Domestic mail matter includes matter deposited in the mails for local delivery, or for transmission from one place to another within the United States, or to or from or between the possessions of the United States.

Porto Rico, Hawaii, the "Virgin Islands of the United States" are included in the term "United States." The Philippine Archipelago, Guam, Tutuila, Manua and other islands of the Samoan group, east of longitude 171° west of Greenwich and the Canal Zone are included in the term "Possessions of the United States." The term, "Canal Zone" includes all the territory purchased from the Republic of Panama, embracing the "Canal Zone" proper and the islands in the Bay of Panama named Perico, Naos, Culebra, and Flamenco.

Domestic rates of postage apply to mail matter sent from the United States to U. S. postal agency at Shanghai, China, U. S. Naval Hospital at Yokohama, Japan, the crew of vessels of war of the United States, and to and from members of U. S. European forces, and with certain exceptions to Canada, Cuba, Mexico and Panama.

Domestic mail matter is divided into four classes, as follows:

First Class.—Letters, postal cards and all matter wholly or partly in writing, whether sealed or unsealed, (except manuscript copy accompanying proof-sheets or corrected proof-sheets of the same). All matter sealed or otherwise closed against inspection. Rates of postage—two cents an ounce or fraction thereof. Postal cards, one cent each. On "drop letters," two cents an ounce or fraction thereof when mailed at letter-carrier post-offices, and one cent an ounce or fraction thereof, at offices where free delivery by carrier is not established. Postage to be prepaid by stamps affixed.

Second Class Matter.—Includes newspapers and other publications bearing notice of entry as "second class matter." Any person may send such second class matter at 4 ounces for 1 cent if the complete publication is mailed. If part only is sent, it is placed under 3rd or 4th class rate. There is no such rate as 4 cent per pound for 2nd class mail.

What sender may write on 2nd class matter. On the wrapper or matter itself, may be shown the name of sender, preceded by "From." 2nd, The address of person sent to, the words marked copy, or sample copy, or both. On the matter itself, can be placed what is on wrapper, corrections in type, designate by marks, but not by words, on passages in the text. Other writing will place it in 1st class rating.

Third Class Matter.—Circulars, newspapers, and periodicals, not bearing imprint as "second class matter," nor embraced in the term "book." Miscellaneous printed matter on paper not having the nature of an actual personal correspondence, proof sheets, corrected proof sheets, manuscript copy accompanying same, and matter in point print, or raised characters for the blind

Rate of postage is one cent for each two ounces or fraction thereof. Limit of weight, 4 lbs.

Matter or material other than paper is 4th class, as are books.

Books are 4th class or Parcel Post matter, as are packages of miscellaneous printed matter weighing over 4 lbs.

PARCEL POST

Fourth Class.—All matter, including farm and factory products, and books not now embraced by law in either the first, second, or third class, not exceeding 70 pounds in weight, for first and second and 3rd zones and not exceeding 50 pounds in weight for the other zones, nor greater in size than 84 inches in length and girth combined, nor in form or kind likely to injure the person of any postal employe, or damage the mail equipment or other mail matter, and not of a character perishable within a period reasonably required for transportation and delivery.

Local Zone covers parcels mailed at any P. O. for local delivery at such office, at any city letter carrier office, or at any point within its delivery limits, for delivery by carrier from that office. At any P. O. from which a rural route starts for delivery on such route, or when mailed at any point on such route for delivery at any other point thereon, or at the office from which the route starts, or for delivery for any other route starting from such office.

First Zone includes all territory within the local delivery of any office for local delivery, or for delivery by city carrier or on rural routes emanating from that office.

Second Zone includes all units of area outside the first zone located in whole or in part within a radius of one hundred and fifty miles from the center of a given unit of area.

Third Zone includes all units of area outside the second zone, within a radius of three hundred miles.

Fourth Zone includes all units of area outside the third zone within a radius of six hundred miles.

Fifth Zone includes all units of area outside the fourth zone within a radius of one thousand miles.

Sixth Zone includes all units of area outside the fifth zone within a radius of one thousand four hundred miles.

Seventh Zone includes all units of area outside the sixth zone within a radius of one thousand eight hundred miles.

Eighth Zone includes all units of area outside the seventh zone. Also Alaska (and between any two points in Alaska), Hawaii, U. S. postal agency of Shanghai, China, Canal Zone, Philippine Islands. To, from, or between Guam, Tutuila and Manua, and other Samoan Islands, east of longitude 171° west of Greenwich, and the U. S. and its other possessions, between U. S. and its vessels in foreign waters.

Rate of postage on matter weighing not more than four ounces shall be one cent for each ounce or fraction of an ounce, regardless of distance; and on such matter in excess of four ounces in weight the rate shall be by the pound. See following table: The postage in all cases to be prepaid by stamps affixed.

Weight in pounds.	Local.	Zones.							
		1st Up to 50 miles.	2d 50 to 150 miles.	3d 150 to 300 miles.	4th 300 to 600 miles.	5th 600 to 1,000 miles.	6th 1,000 to 1,400 miles.	7th 1,400 to 1,800 miles.	8th Over 1,800 miles.

C. O. D. The sender of a mailable parcel, postage prepaid, may have the price of the article and charges thereon collected from the addressee on payment of a fee of 10 cents in stamps affixed, amount to be collected not to exceed $50, or $100 if a fee of 25 cents is paid.

Name and address of sender must be on each parcel, thus: "From"——

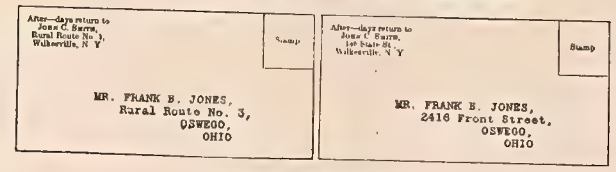
Special Delivery.—Delivery can be hurried by a small additional payment.

Insured Parcels.—A fee of 3 cts. insures up to $5, over $5 to $25 for 5 cts., over $25 to $50, 10 cts., or $100 for 25 cts., in addition to postage for mailing. Insurance can be had at post-offices or through rural carriers. Receipt for insurance is given.

Registration not Necessary on insured or C. O D. parcels.

War Tax.—On parcels taking 25 cts. postage, the tax is 1 cent, if less than 25 cts., no tax; 26 cts. to 50 cts. postage calls for 2 cts. war tax, 51 pounds and over 3 cts.

FORMS OF ADDRESS WITH RETURN IMPRINT.



POSTAGE STAMPS.

Postage Stamps.—The P. O. Department issues postage stamps as follows: 1 to 13, 15, 20, 30, 50, 75 cts., $1, $2, $5.

Books of Postage Stamps.—Stamp books, 24 of 1 cent stamps, 96-1c., 12-2c., 48-2c., 24-1c., 24-2c., at a value of 1c. in excess of cost of stamps.

Stamped Envelopes.—A variety of stamped envelopes are issued by the postoffice department. Current styles and prices can be obtained at the postoffice.

Stamped Newspaper Wrappers are issued in several forms.

Imprint on Stamped Envelope.—When stamped envelopes are purchased in lots of 500, or its multiple, of a single size, quality, and denomination, the P. O. Department will, upon request through the purchaser's post-office, print his return card without extra charge. Return cards are not printed on newspaper wrappers or postal cards.

Airplane Mail Service.—This growing system should be borne in mind, when conditions demand very quick delivery.

POSTAL CARDS.

United States Government postal cards are entitled to all the privileges of letters except that of return to the sender when undeliverable.

They may bear written, printed, or other additions as follows:

The face of the card may be divided by a vertical line placed approximately one-third of the distance from the left end of the card; the space to the left of the line to be used for a message, etc., but the space to the right for the address only.

Addresses upon postal cards * * * may be either written, printed, or affixed thereto, at the option of the sender. (Act of July 12, 1876.)

Very thin sheets of paper may be attached to the card on condition that they completely adhere thereto. Such sheets may bear both writing and printing.

Advertisements, illustrations or writing may appear on the back of the card and on the left third of the face.

The addition to a postal card of matter other than as above authorized will subject the card, when sent in the mails, to postage according to the character of the message—at the letter rate if wholly or partly in writing or the third-class rate if entirely in print. In either case, the postage value of the stamp impressed upon the card will not be impaired.

Each unused half of a "reply" postal card will be regarded as one single card.

Used postal cards which conform to the conditions prescribed for post cards, when remailed, are subject to a new prepayment of one cent postage.

REGISTRY SYSTEM.

The system provides for special care and correct delivery of money or valuables to domestic and foreign parts.

In case of its loss, the sender or owner of a registered article prepaid at the letter rate of postage, mailed at, and addressed to, a United States post-office is indemnified for its value up to $25, but private insurance companies will insure registered mail for greater amounts. Parcels prepaid at the letter rate should be sealed.

The registry fee is 10 cents for each separate letter or parcel, in addition to the postage, both to be fully prepaid with postage stamps attached to the letter or parcel. Two or more letters or parcels cannot be registered as a single piece unless inclosed in one envelope or wrapper.

A receipt is given to the sender for every piece registered.

A second receipt from the addressee or his authorized agent, acknowledging delivery, is returned to the sender without extra charge. This receipt is, under the law, prima facie evidence of delivery.

If the article is addressed to a foreign country no receipt showing delivery is returned to the sender unless the words "Return Receipt Demanded" are written, stamped or printed across the face of the letter or parcel.

POSTAL MONEY ORDER SYSTEM.

Advantages of the System.—The primary object of the Postal Money Order System is to offer to the public a safe, cheap and convenient method of making remittances by mail.

Application.—The process of obtaining a money order is to fill in a simple form, called an "application," which form is furnished free of charge, and to present such application at the money order branch of the post-office, or one of its stations, where, upon payment of the sum to be sent and of the small fee exacted, a money order will be drawn for any desired amount from one cent to one hundred dollars payable at any money order office in the United States designated by the applicant. When a larger sum than one hundred dollars is to be sent, additional orders may be obtained. There is no limit to the number of money orders which may be sent by one remitter in one day to the same payee. If the applicant resides on a rural delivery route, application may be made through the carrier, who will furnish the form therefor. In all such cases a receipt for the amount is given the remitter by the carrier.

Fees for Money Orders payable in the United States (which includes Hawaii and Porto Rico) the Virgin Islands of the U. S., Canal Zone (Isthmus of Panama), Guam, the Philippines, and Tutuila, Samoa; also for orders payable in Bahamas, Bermuda, British Guiana, British Honduras, Canada, Cuba, Newfoundland, the United States postal agency at Shanghai (China), and in certain islands in the West Indies.

For sums not exceeding $2.50	3 cents
Over $2.50 to $ 5	5 cents
Over 5 to 10	8 cents
Over 10 to 20	10 cents
Over 20 to 30	12 cents
Over 30 to 40	15 cents
Over 40 to 50	18 cents
Over 50 to 60	20 cents
Over 60 to 75	25 cents
Over 75 to 100	30 cents

Foreign Money Orders.—Many nations come under same classification as "domestic," in money order regulations. The list of such constantly grows and should be considered when it is desired to send money to ANY PLACE IN THE WORLD.

SPECIAL DELIVERY.

A special-delivery stamp, or ten cents' worth of ordinary stamps in addition to the lawful postage, secures the immediate delivery of any piece of mail matter at any United States post-office within the letter-carrier limits of a city delivery office and within a mile limit of any other post-office. When ordinary stamps are used to obtain immediate delivery of mail the words "Special Delivery" must be written or printed on the envelope or covering.

Hours of delivery: From 7 a. m. to 11 p. m. at city delivery offices, and from 7 a. m. to 7 p. m. at all other offices, or until after the arrival of the last mail at night, provided that be not later than 9 p. m. Special-delivery mail must be delivered on Sundays, at postoffices of the 1st and 2nd class, and at the postoffices that may be open Sundays.

If special-delivery matter fails of delivery because there is no person at the place of address to receive it, the matter is returned to the post-office and delivered in the ordinary mail.

UNMAILABLE MATTER.

Unmailable domestic matter—that is, matter which is not admissible to the United States mails for delivery in the United States or in any of its possessions—includes:

All matter illegibly, incorrectly, or insufficiently addressed.

All transient second-class matter and all matter of the third or fourth-class not wholly prepaid; and letters and other first-class matter not prepaid one full rate—2 cents.

All matter weighing over 4 pounds (except 2nd class matter and parcels post, single books, and documents printed and circulated by authority of Congress).

All matter harmful in its nature, as poisons, explosive or inflammable articles, matches, animals and reptiles, live or dead (but not stuffed) fruits or vegetables liable to decomposition, guano, or any article exhaling a bad odor, vinous, spirituous or malt liquors, cocaine or derivatives thereof and liquids liable to explosion, spontaneous combustion, or ignition by shock or jar, such as kerosene oil, naphtha, benzine, etc.

All obscene, lewd, or lascivious matter, and every article or thing intended, designed, or adapted for any indecent or immoral purpose, or for the prevention of conception or procuring abortion, or matter of a character tending to incite arson, murder or assassination.

MISCELLANEOUS ITEMS.

Address.—Mail matter should be addressed legibly and completely. The name of the addressee, the post-office, and the State or Territory must be given. If the addressee resides in a city, having city delivery service, the house number and street, if known, should be given. If the addressee resides on a rural delivery route, the number of the route, if known, should be given. When mail matter is intended to be delivered through the general delivery at a post-office, the words "General Delivery" should be added as a part of the address.

Mail matter addressed to persons temporarily sojourning in a city where city delivery service is in operation should be marked "Transient" or "General Delivery," if not addressed to a street and number or some other designated place of delivery.

To insure return in case of nondelivery because of misdirection, insufficient payment of postage, or other causes, the sender's name and address should be written or printed in the upper left-hand corner of the envelope or wrapper.

Concealed Matter.—For knowingly concealing or inclosing any matter of a higher class in that of lower class, and depositing or causing the same to be deposited for conveyance by mail at a less rate than would be charged for both such higher and lower class, the offender will be liable for every such offense, to a fine of $10.

Currency.—Postmasters are not required to accept as payment for postage stamps, etc., any currency which may be so mutilated as to be uncurrent or as to render its genuineness doubtful. Nor are they required to receive more than 25 cents in copper or nickel coins in any one payment, nor to affix postage stamps to letters. Postmasters are expected to make change as far as possible. They must not give credit for postage.

Dead Letters.—All inquiries relative to mail matter known to have been sent to the Division of Dead Letters should be addressed to the Fourth Assistant Postmaster-General, Division of Dead Letters; and in such cases the letter of inquiry must state to whom and what post-office the article was addressed, and give the name and full address of the writer or sender, the date and place of mailing, and a brief description of the contents.

Record is kept in the Division of Dead Letters only of letters or parcels which contain valuable inclosures. Undelivered letters containing ordinary correspondence are returned when the writer's identity can be ascertained, otherwise they are destroyed, and in either case no record is kept.

Hotel Matter.—That is, matter addressed for delivery at hotels—should be returned to the post-office as soon as it is evident that it will not be claimed. Proprietors of hotels and officers of clubs, boards of trade, and exchanges should not hold unclaimed letters longer than ten days, except at the request of the person addressed and should redirect them for forwarding if the present address is known; otherwise they should be returned to the post-office. Proprietors of hotels should omit the return request from envelopes supplied gratuitously to their guests, and persons using such envelopes should be careful to designate what disposition should be made thereof in case they can not be delivered.

Lists of Names.—Postmasters are forbidden to furnish lists of names of persons receiving mail at their post-offices.

Mutilated Currency addressed to the Treasurer of the United States for redemption may be registered free, when the package is presented at the post-office before sealing and certain conditions (which will be made known by the postmaster) are there complied with, but the postage thereon must be prepaid at the letter rate.

Periodical Publications.—The Post-Office Department does not determine questions regarding the liability of a subscriber for the subscription price of a publication. Publications for which the addressee is not a subscriber and which are not desired, may be refused and not removed from the post-office, or be returned to the postmaster endorsed "Refused."

Persons who receive regularly publications for which they have not subscribed should refuse to take them from the post-office. If, after such refusal the publication continues to be sent, a notice of that fact should be sent to the Third Assistant Postmaster-General.

A subscriber to a publication should promptly notify the publisher of any change in his address.

Rural Mail Boxes.—Persons desiring the rural delivery service must erect, at their own cost, boxes conforming to P. O. Department regulations and approved by the Postmaster-General. Copies of the Rural Delivery Box Regulations and list of approved boxes may be had upon application to the Department. Lists of approved boxes may be seen at rural delivery post-offices.

FOREIGN MAIL MATTER AND RATES OF POSTAGE.

The rates of postage applicable to letters to all foreign countries are as follows:

Five cents if one ounce or less, 3 cents for each ounce or fraction of an ounce, above 1 ounce.

Exceptions.—Two cents per ounce or fraction of ounce, on letters to England, Ireland, Scotland, Wales, Bahamas, Barbados, Bolivia, British Guiana, British Honduras, Canada, Colombia, Cuba, Dominica Republic, Dutch West Indies, Honduras, Leeward Islands, (Antigua, Barbuda, Redonda, St. Kitts, Nevis with Anguilla, Dominica, Montserrat and British Virgin Islands, Mexico, Newfoundland, New Zealand, Nicaragua, Peru, Panama Republic, Trinidad and Tobago, Grenada, St. Vincent, Grenadines and Saint Lucia.)

International Reply-Coupons are sold at 6 cents each, for use in sending abroad for return postage. Reply-coupons issued by other countries are redeemable at United States post-offices in postage stamps to the value of 5 cents for each Reply-coupon.

Fees for Foreign Money Orders.—Money orders will be issued to practically any part of the world. A considerable number of countries comes under domestic classification. Lists are subject to change, and inquiry at postoffice is only guide.

INTERNATIONAL PARCEL POST.

Parcels may now be sent to almost every part of the globe. The list is constantly changing. Rate is 12 cents per pound, but there are incidental charges and regulations varying with the different countries. Application to the local postoffice for current rates, dimensions and extra charges is advisable to insure safe arrival.

POSTAL SAVINGS SYSTEM.

An account may be opened and deposits made by any person of the age of 10 years or over, in his or her own name, and by a married woman in her own name and free from any control or interference by her husband. No account will be opened in the name of any corporation, association or society, in the name of any person as a member of a firm or partnership, or in the name of two or more persons jointly, or in the name of one person in trust for or on behalf of another person or persons.

An account may be opened at any depository post office, but no person may at the same time have more than one postal savings account either at the same office or at different offices. No account will be opened for less than $1, nor will fractions of a dollar be accepted for deposit. No person is permitted to deposit more than $100 in a calendar month nor have a balance to his credit of more than $2,500, exclusive of interest.

Receipts for deposits are in form of postal savings certificates of $1, $2, $5, $10, $20, $50, $100, $200, $500 value each, bearing name of depositor, account number; date of issue, name of depository office, and date on which interest begins. Postal savings certificates are not transferable or negotiable.

Amounts less than $1 may be saved by purchasing 10-cent postal savings cards and 10-cent postal savings stamps. A postal savings card with ten postal savings stamps affixed will be accepted as a deposit of $1 either in opening an account or in adding to an existing account, or it may be redeemed in cash.

Interest at the rate of 2 per cent per annum will be allowed. Interest will not be allowed for any fraction of a year. Simple interest is allowed, but interest may be drawn out and redeposited.

A depositor may exchange the whole or any part of his deposits for registered or coupon United States postal savings bonds, issued in denominations of $20, $100 and $500, bearing interest at the rate of 2½ per cent per annum, payable semi-annually, redeemable at the pleasure of the United States after one year from date of issue, and payable 20 years from such date. Both principal and interest is payable in United States gold coin. Exchange may be made on January 1st and July 1st of each year.

Postal savings deposits which have been exchanged for bonds are not counted as part of the maximum balance of $2,500 allowed one depositor, and there is no limitation upon the amount of postal savings bonds which ultimately may be acquired by a depositor.

Postal savings bonds are exempt from all taxes or duties of the United States as well as from taxation in any form by or under State, municipal or local authority.

TO FIND UNIT NUMBERS

Units are numbered by the Postal Department in tiers of 50's, thus 50, 100, 150, 200, etc., beginning in Maine and ending on the Pacific Coast. At the northern border of the U. S. will be found the index number. The number of the one immediately below this index number is one plus the index number, and so on in order from North to South. An additional assistant will be found in the tier of consecutive numbers running from North to South on the map. For instance, if you want 2067 you will find it in column 2050. Run down until you strike the North-South tier numbered 17 and you have 2050 + 17 = 2067 This method is simple and preserves the map for general reference.

WHERE TO MEASURE FROM

Don't estimate zones from your post office but from the *center* of the unit in which your post office is located. If you send from a rural route you must estimate zones from the center of the unit of the post office from which your package starts.

WHEN THE ZONE LINE HITS ON THE UNIT LINE

This will occur in a few instances. Better ask your postmaster for rate or, if you prefer, pay the rate of the next higher zone.
